I hate plastic, so I used a genuine glass drinking straw. Everything is fine and the radio works very well, but for some reason my bare feet really hurt whenever I walk past the window.

2. Re: Inductance Loop versus Inductance Dipole ...

Newsgroup: rec.radio.shortwave
Date: 2006-06-01 01:51:07 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149126667.871071.35030@i39g2000cwa.googlegroups.com>
Source record: 76835

Switcher,

A Loop is a Loop and a Dipole is a Dipole [.]

Does a Straight piece of Wire have Inductance ?
A Straight piece of Wire has Two Ends that are Not
Connected. Any Current in the piece of Straight
Wire travels along {down} the Wire . . . . . .

The Dipole is simply two pieces of Wire with a common
Longitudinal Axis. Voltages and Currents within the
Dipole are 'relative' to the Two separate pieces of Wire
that make-up the Dipole. While the Dipole may have some
Theoretical Inductance - Practically Speaking It Does Not.

The Loop is a Circular {Bent} piece of Wire which has
the Two Ends Connected. Any Current within the Loop
travels around the Loop. The Circular Current within
the Loop creates the Inductance ? Inductance is both
a Theoretical and Practically Characteristic of a Loop.

A One-to-Two-to-Three Turn Loop Antenna designed for
Shortwave will have less Inductance -then- a Ten-to-Twenty
Turn Loop Antenna for Medium Wave.

A Medium Wave One (1) MHz Dipole Antenna would
have 468 Feet of Wire Tip-to-Tip -while- A Medium
Wave Loop Antenna might be One Foot Diameter with
Twenty-Four Turns and have about 75 Feet of Wire
wrapped around it.

-FWIW- Most {Small} Medium Wave Loop Antennas
have less then a One-Tenth (1/10) the amount of Wire
that a Single Turn Loop Antenna would have for the
same Wave Length 1 MHz = 1005 Feet -vice- 75 Feet.

Again - A Loop is a Loop and a Dipole is a Dipole [.]
The Theoretical Factors that make one an Efficient
and Effective Antenna at One Frequency -may-not-be-
The same Theoretical Factors that make the other one
an Efficient and Effective Antenna at another Frequency.

gee - I lost it ! - what were we talking about ? - iane ~ RHF

That was Plutonium and they are no antiques. The cafeteria kitchen at Chernobyl was looted by visiting Israeli art students and they decided to sell the stuff to make money for their upcoming American trip.

The nationality of a radio won't make any difference to me. Heck..many people own sets made in communist China, Stalinist Russia, Hitler's Germany and yes, even Bush's United States.

It's not your fault that your Constitution is in shreds and your government is out of control. Freedom has been WAY overrated, anyways. Get used to the New Order.

Mark, I could care less about you or your fans, but I had your
screen nics kill filed, along with your fans. They still respond
to you, so this constant changing of screen nics is just so you
can be sure everyone else can see your problems, well most
don't care. This is straight from your TOS, so please read carefully

(g) to bombard individuals or newsgroups with uninvited communications, data
or information, or other similar activities, including but not limited to
"spamming", "flaming" or denial or distributed denial of service attacks.

(l) to post or transmit information or communications that are defamatory,
fraudulent, obscene or deceptive, including but not limited to scams such as
"make-money-fast" schemes or "pyramid/chain" letters;

p) to generate excessive amounts (as determined in our sole discretion) of
Internet traffic, or to disrupt net user groups or email use by others;

Now I'm sure there are more than enough people that are willing to take your
posts, copy them including headers and send them to techsupport@Hughes.Net &
Abuse@Hughes.Net and make complaints, but all you really have to do is stop
responding & changing nics to bypass newsgroups filters.

I will save you posts, as I have done with the others, then kill file
your latest screen nics, but please heed this little bit of advise and
stop changing your screen nics

Landshark

The big picture is the market who buys shortwave radios.

I think the market research which translates to product sales is that
SSB is less of an issue with buyers than the old school thinks it is.

Sales are proof...when the E10 was priced competitively with the rest
of the market it FLEW off the shelves.

no it is not to do

it is becuase google imposes limits on how much I can post under a nick
>
> (g) to bombard individuals or newsgroups with uninvited communications, data

you mean I must submit to being the dsubject of Defamation by Robeson
and Wismen and Dr death and fred and TOM

I must also jede by the number time what you suggest has BEEN done that
Hughes does not agree with your assement of the situation

indeed my contacts with have them in agrreement that as long and
Robeson and Wisme and the rest contiue as they are doing and thier ISP
ignore Hughesnet complaints to them I have little choice
>

> I will save you posts, as I have done with the others, then kill file

> stop changing your screen nics
complain away indeed if you did get my access termitaed it might work
out to favor since it would give real wolrd damges to Sue, Robeson and
Wismen for, the one thign I lack is the clear real world damge

if you can stop my foes from their ever incresing tide of filth then I
will not need new nick to use

I don't shift nicks I use them all and all the bandwidth they provide

don't threaten me asshole

Of course a straight wire has inductance.

L= 0.0002B[(ln2*B/A)- 0.75]

Where:
L= inductance of the wire in uH
A=wire radius in mm
B=wire length in mm
ln= natural log

> The Dipole is simply two pieces of Wire with a common

How about a dipole cut for say 7 MHz and look at the input Z at 8 MHz: R+JX
i.e. resistive and inductive component

Yeah, that would not.

I was think more along the lines of:

Starting from the radio the coax center conductor goes to the antenna
jack tip and the shield is not connected to anything. This coax is 19
feet long. At the coax far end the center conductor and shield are
connected together and a single insulated wire continues another five
feet starting at the center/shield junction.

OK then you will most likely have to pay 5.5 times that for a PC radio
such as the WiNRADiO. This is a computer card radio with a DRM option.
The least expensive PC card radio they have.
WR-G303i $499.95
DRM software $49.95
http://www.winradio.com/

Maybe there is a better deal on the DRM consortium site.

How did you like the new National transmitters? Personally, I wanted
one of the old Crosley transmitters they replaced. All that green metal
flake paint and glass windows was a classic design.

> for inductivity then ??

You are mixing apples and oranges.

Electrically small loop antennas, which are much smaller than 1/4
wavelength are very inefficient. In order to improve this you have to
resonate at some frequency by placing a capacitor across it. This
circuit will be very sensitive to passing EM waves where the inductive
reactance equals the capacitive reactive reactance so it makes sense to
speak of the coil in terms of inductance since you will want to know the
right value of capacitance to use for resonance to occur at the
frequency of interest.

Talking about an electrically small loops lumped inductance makes sense
when constructing a L/C resonant antenna with an electrically small loop.

A dipole uses elements that are the right electrical length where
inductance and capacitance are distributed over the length of the
antenna elements and is not looked at as lumped quantities. Generally
you look at it in terms of propagation time and the resultant electrical
length of the elements. A dipole use two 1/4 wavelength elements.

A formula you can use to calculate the electrical length needed for a
certain frequency is
Length (feet)=468/Frequency (MHz)

This length is split in the middle forming the two 1/4 wave elements.
The output is at the center split.

You need to be more specific.

For instance something I have noticed is a post by you the FROM header
looks like this

From: "RHF" <rhf-newsgro...@pacbell.net>

Even if I use the show original.

This is extended to the attribution in the body of the post. An example
of this is my reply to a post by DxAce

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

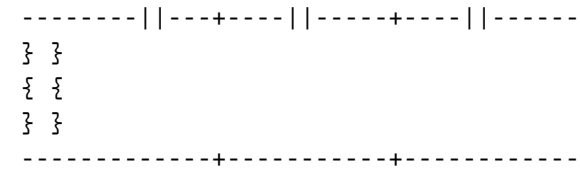
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

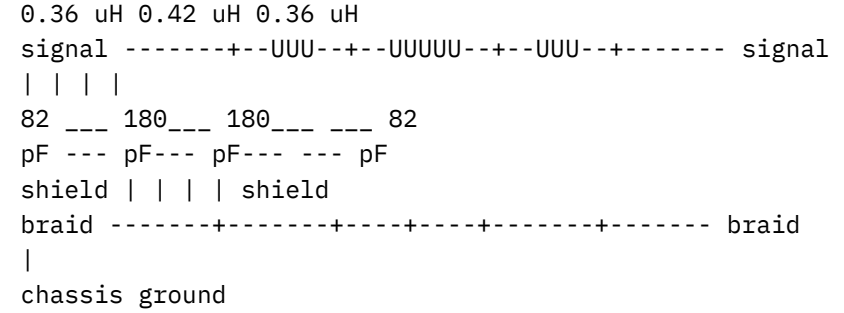
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

Craig M,

WHY - A 'separate' PC Based IBOC "HD" AM/FM Radio
Plug-and-Play Card would be My Choice for a First "HD" Radio

I don't want an IBOC "HD" AM/FM Radio for the Kitchen

I don't want an IBOC "HD" AM/FM Radio for the Bedroom

I don't want an IBOC "HD" AM/FM Radio for the Faimly
Room Sound System.

I would intitially want one for the Home Office to
'passively' Listen to the IBOC "HD" AM/FM Radio
while I am using the PC. For me a Plug-and-Play
Card for an IBOC "HD" AM/FM Radio would be
the Answer to my HD Radio needs.
- - - It is the product that I am looking for . . .

The PC based IBOC "HD" AM/FM Radio Plug-and-Play
Card would simply be a Radio that is co-located within
the PC and using the PC's Sound System {External
Speakers} for the Sound Output. A Radio to 'passively'
Listen to while using the PC in the Home Office.
A Radio to simply listen to the "LOCAL" AM & FM
Radio Stations without of the IBOC problems related
to Distance (DX) Out-of-Area Stations.

Again -IF- IBOC becomes a "Reality" then "We All"
will have to 'Live-With-It' as Radio Listeners in the
future. The choice will be to Listen to "HD" Radio
or listen to something else other than Radio.

hope this explains "why" i would get a 'pc' base
iboc 'hd' am/fm radio plug-and-play card -cause-
i like listening to radio ~ RHF

Telamon,

Once again you are speaking to a 'specialised'
DRM type Shortwave Radio. While I am talking
about a consumer grade AM / FM Radio that
happens to be "HD" {IBOC} and incorporated into
a Plug-and-Play Card for a PC.

Something like these for TV Video and Sound :
* TV Tuner Video Capture PCI Card FM Radio
http://cgi.ebay.com/_W0QQitemZ8806514986
* WinTV-GO-FM TV Tuner Video Capture PCI Card
http://cgi.ebay.com/_W0QQitemZ8786349885
* 3D Vision MPEG TV Tuner Capture Card
http://cgi.ebay.com/_W0QQitemZ8819763072

-IF- They can build them for TV with Sight-and-Sound
for under $100 -then- They can build them for
"HD" {IBOC} AM & FM Radio too.

FWIW -IF- RadioShack can sell a complete
HD {IBOC} AM & FM Radio for $300
http://tinyurl.com/s7n7d
Then a PC Card for a "HD" AM & FM Tuner
should be at least 'half' that Price - IMHO
http://www.ibiquity.com/hdradio/hdradio_hdproducts.htm

"The List" of HD Radio Broadcasting Stations
in the State of California - Currently : 79
http://www.ibiquity.com/cgi-bin/liststations?state=CA&go=Go%21
Note that I currently Receive the Analog Signals
of both very well Day and Night up here (120 Miles)
in Twain Harte, CA :
San Francisco, CA - KCBS @ 740 AM
San Francisco, CA - KQED @ 88.5 FM
Plus - Fresno, CA - KMJ @ 580 AM

I suppose one could also use stain glass foil in a pinch (much less wide, perhaps 1/4 inch or so). One could wrap the whole inside of a room with it, lol. Anyways, great idea, thanks.

Heres a page with an idea of prices and sizes just click on "came and
foil" (came is the lead used in the borders of stain glass, foil is
the, well, foil used in stain glass):

SSB is a useful feature for those who have an interest in decoding ssb signals. Just as broadcast shortwave coverage is a useful feature for those with an interest in hearing broadcasts on the hf bands. As with other features they are of interest only to those who want to use them.

It is worth noting that The DE1103 with ssb has attracted far more ongoing interest and it is not being closed out at fire sale prices. I do have a couple of questions though. Just whose market market research on ssb did you find was translated into sales. Also, what or where exactly is the old school.

>
> Sales are proof...when the E10 was priced competitively with the rest
> of the market it FLEW off the shelves.

When it was marked down to $50.00 there were very few E10's in my area that flew off the shelf because there were very few E10's to fly, walk or be carried anywhere. The stores had demos mostly. Had the DE1103 been available at RS for the same price I suspect that it would have outsold the E10 by a considerable margin.

The DE1103 is priced the same as the E10 that was closed out at RS, but it has more features, sounds better and performs better on mw. The E10 is a good radio, but there are clearly better ones available at that price.

Only ones I remember that carried AM stations were the one in Casper, WY (carried KTWO on their Ch. 3 weather/time channel), Astoria, OR (carried KAST on THEIR weather/time channel) and the only one I know that had it recently was the TV guide channel on the system in Murfreesboro, TN, which carried WSM-AM on theirs as little as three years ago when I was there.

> > when constructing a L/C resonant antenna with an electrically small loop.
>
> A dipole can be seen as a cap ...

This is the way I currently understand it:

A grounded vertical looks like an inductor with
capacitance between the distant ends.

When the two ends (top of the antenna and ground)
are bent closer to but not touching it forms a loop, LC tank.

Extending a tank into the 3rd dimension by rotatation
of the inductor around the capacitor forms a resonant cavity.

Extending the tank into the 3rd dimension by translation
results in a waveguide.

Has anyone seen anything like inductively ganged
horizontal loop antennas containing some passive
closed loops ? Sort of like a loop equivalent of
a yagi but omnidirectional?

I hadn't thought about that. Doubtless the marketing geniuses had,
and consider it an advantage... but if it makes looking for new radio
stations harder to do, will people just say "the hell with it" and
turn on their MP3 players instead?

It certainly helps take what little serendipity is left in radio out
-- no way to find a new station by band scanning, unless you're very
very patient.

I just sold my R8B to catch up on some bills. I had recently sent it
back to the factory for a tune up. I'm sure new owner is happy with
it. I am thinking of maybe saving up for a Harris R590A to replace it
or having my friend Frank, WA1GFZ, sell me one of his Racal RA6830
radios. He goes thru em and tweaks em in real nice. I am plodding
along with an unmodified R75 for now and missing my Drake.

The cable system in Decatur, Il carried the local AMs as well, when
I worked downstate.

We even arranged a hard line connection from the studio to the Cable
company's head end, and left the automation running, so WDZ, a daytimer,
would have a 24 hour presence.

But....XM & Sirius have commercial free music. And deep playlists.

Supposedly.

At least for now.

The 27 mpg happens mostly on long trips. I might have been a bit optimistic to apply that number to the drive from our motel to the Hamvention, but I can get 24 doing it, if I don't hit the gas too hard getting on the interstate. Of course, the interstate is done on cruise control, and the area is flat, so no hill climbing, or not much, anyway.

This is a vanilla WRX, not an STI, and yes, I pass 'em all the time. Its just that I use cruise control a lot, at +7 of the speed limit, and that does pass some people. I mostly pass 'em when they pull off the road to whiz, get gas, eat, or one of several other delays that I minimize. I don't usually stop at all until the car needs gas. This seems to make for good mileage.

I still don't understand why a stand-alone radio wouldn't fit the bill
for that kind of use.

When I'm on the 'puter, I've usually got a small table radio going
nearby.

I own tree (three) radios which actually were manufactured in Germany.A Grundig (I still think it was manufactured by Telefunken,I think it was manufactured in 1957,according to a date in one of the two little owners/operators booklets) AM/FM/Shortwave/Phonograph wooden cabinet floor model Radio.And I own a Telefunken AM/FM/Shortwave Opus 7 (I guess it was manufactured in the late 1950's or sometime in the 1960's,heck,I dont know) wooden cabinet big table model Radio.And I own a Blaupunkt Derby 691 plastic cabinet Radio.Nothing wrong with made in Germany Radios or made in Germany wimmins either.Back in the 1950's,an American guy whom lived up the street from me was in Germany in World War Two,he married a German woman in World War Two,they had a little girl) However,I still believe made in America Radios are the very best.

I never thought id consider paying for radio.... but
lately I've been giving thought to getting rid of TV
completely and canceling cable bill.

Id replace it with satellite radio IF the following:

1. I can buy a device that acts as a portable receiver
and portable DVR to allow me to time shift. And I can
take this device ANYWHERE in the US and keep on my
person if wanted

2. The programming had a LOT of talk shows and audio
stories and documentaries. Old time radio, etc

Can someone one advise if this possible?

Source record: 76797

Dear RHF,

It should be obvious that governments, maybe in conjunction with one another, maybe not, but certainly in conjunction with major media companies, are trying to set up a communications/entertainment system which is completely controllable by them - in other words, the ability to maintain total censorship over the meda, whether it be for content or payment.

The media companies would like nothing better than to have us PAY each and every time we WATCH, LISTEN, or READ something - EACH AND EVERY TIME. Thus there would be no such thing as ownership of a copy of a movie, of music, or of literature. You want to access it? YOU PAY!

And, of course, ALL governments would like to control what its citizens can watch, listen to, or read - even the most "benevolent" governments.

Digital media give governments/media companies the power to do this.

Can "digital" be "hacked?" Yes it can but, with the laws now in place, no one DARES do this by, for example, reverse-engineering, and, even if someone did "break" a digital code, he would DARE NOT publish (or even tell anyone) his accomplishment for fear of reprisal, such as jail-time.

I'm not kidding about all this. It's happening right now. Europe was a "hot-bed" of hackers but they have been muzzled by threats by their governments (for example, Finland, on January 1st of this year). "Hollywood" has used threats of withholding access to its entertainment if governments do not follow through on muzzling hackers. You may be reading in the newspapers (as far as you can believe them) that our government has been pressuring the Chinese government to "crack down: on hackers in that country (and we all know how "effective" a Chinese crackdown can be!) and the Chines are doing just that.

Mind you, I certainly support the right of a content owner to have a reasonable period of exclusivity in return for his/her efforts in producing something. But 95+ years?

And I support a government's right to muzzle traitorous or terrorist activity within its borders (to a reasonable extent and presuming the government itself is not a "terrorist" organization) but NOT to inhibit/prohibit its citizens from hearing others' legitimate viewpoints.

Analog radio/communications allows free and uninhibited exchange of
information. Digital radio/communications does not.

As always, my thoughts only.

Best,

Joe

The shield is a 19 foot element and the 5 foot single insulated wire is
a continuation of it where the connection to this element is offset from
the end by 5 feet.

< Snip >

Your original and first three posts to the thread speak to both DRM and HD AMBCB radio.

The WiNRADiO will work for the AMBCB but I don't see a HD AMBCB decoder software for it on the Winradio site or anywhere else.

Sorry I didn't understand that you were looking for an argument. I gave
you an answer to your theoretical question and the reasoning behind it.

> > Talking about an electrically small loops lumped inductance makes sense
> > when constructing a L/C resonant antenna with an electrically small loop.
>
> A dipole can be seen as a cap ...

You also asked how to calculate the size of a dipole and I gave you the
formula for this along with an explanation for it. Rather than argue
about it why don't you go read up on the subject. There are sites on the
Internet that you can read or you can go get a book on the subject.

Come back and post about what you have found.

Ever since eham.net shutdown, in part, to revamp their reviews process, my negative postings concerning the Eton E1 and Grundig S350 are periodically removed, even though they are true and accurate ! Now, I have posted under a different login name, and will periodically check to see, if they are removed. Maybe, that creep that kicked me off the Yahoo Grundig S350 Group, for being too annoying, has a buddy at eham.net ! Nonetheless, the same negative reviews, posted on Amazon, remain, and are mirrored to many sites across the Internet ! Grundig/Tecsun/Eton shall be undermined !

BOYCOTT EHAM.NET !

To a lot of people, $150 a year for what they get free is not worth it. Deep
playlists generally mean that hte channels play lots of less popular songs.
Some like this, most do not. If there were 2000 songs people wanted to hear
in any format, terrestrial radio would play them.

The sangean DRM will be able to do this ...
Out in august 2006 ...
It records on a SD card.
There will be other brands too (like Sony..)

I think about buying:

Joe Carr "Receiving Antenna book" and/or "Loop Antenna Handbook".

And in a library some 40 miles away (Roeselare, Roulers in
french/english) they have an old ARRL handbook ..

2 years ago I had that ARRL book at home and found it way too much
electronics, I mean, not stressed on signal from antenna, but on
amplification and such. When I look into that book now, I'll probably
find my way in it much better ...

May 29, 2006 -- The National Hurricane Center's WX4NHC will conduct
its "Hurricane Season 2006 On-the-Air Station Test" Saturday, June 3,
from 1300 until 2200 UTC. The annual station test provides an
opportunity for WX4NHC to check out all of its radio equipment,
computers and antennas using as many modes and frequencies as
possible.

It's also a chance for RFI monitoring of NHC equipment and to conduct
some operator training. It is not a contest or simulated hurricane
exercise.

WX4NHC will operate on HF, VHF and UHF. Phone frequencies will be
7.268, 14.325, 21.325 and 28.525 MHz. CW frequencies will be 14.035,
21.035 and 28.035 MHz. PSK31 will be on 14.070 MHz.

Look for WX4NHC on the DX spotting networks as well. WX4NHC also will
be on the VoIP Hurricane Net (IRLP node 9508; EchoLink WX-TALK
Conference) from 1700 until 1900UTC. WX4NHC also will operate on South
Florida area VHF and UHF repeaters and on FM simplex.

When working WX4NHC, report your call sign, signal report, location,
name and a brief description of current weather conditions (eg,
"sunny," "rainy," "windy").

Nonhams may participate by submitting their actual weather conditions
using the On-Line Hurricane Report Form.

> stories and documentaries. Old time radio, etc

Oh yeah. XM.

>

In fact, both XM and Sirius are taking heat for their builtin
recorders.

What you wish to do is definitely available with satellite radio.

It's precisely how I use XM.

The Joe Carr books are very good. I highly recommend them. The Joe Carr books present basic easily understood concepts, formulas, and practical antenna designs.

Short wave listeners should get the "Joe Carr's Receiving antenna handbook." This book covers many antenna types and almost any type you would want to make for short wave, AMBCB, or LW reception.

Has it occurred to you that they don't have the form turned on because the test doesn't occur until Saturday, June 3 2006?

I have tried a CCrane CCPlus with and without Terk AM Adavantage antenna and while both work pretty well at home the reception in my windowless basement office (hey, I'm new there) still sucks. I get the same stations as I got on a cheap pocket unit just a little clearer. Since I am in a podunk town I am stuck with local AM stations and a few strong FM stations. AM won't even pick up over 25-30 miles so DX'ing looks unlikely. FM is limited to about 50 miles to the north and less than that for stations to the south (which are sadly the better ones). I am pretty sure the Crane is going back but I like the features AM/FM/WX/TV and the digital tuning, SW is optional to me especially in this location. With no window satellite is out and online satellite or streaming is also not an option. So here's my question, can anyone reccommend a good desktop radio that has AM/FM/WX/TV and maybe SW? I know it is trial and error but if anyone has some good advice I'd appreciate it.

This is what I have been talikng about all along - the CCradio, S350,
and SuperAdio all all over-hyped, over-priced, glorified AM/FM/SW
receivers ! I almost found out the hard way too - I bought an S350
only to find out that my $25 RS PLL radio picked up the same stations,
as my S350, and the same goes for my car radio ! I am sure that my now
returned S350 is still sitting on the shelves at RS ! I have a $25 RS
model 12-898 PLL radio, that is really well-made, and very
sensitive/selective, but it has been discontinued. Luckily, I have two
new-in-the-box, as backups. Amazon has a few AM/FM/TV/WX radios, with
some reviews; you could search on
"AM/FM PLL". I just wouldn't get a drifty analog radio...

Hey guys,

Now, let's all be passionate about our radios !

Update: eham must be looking at IP address, because they removed my
reviews posted under a different name. Damn !

****
****

Here is what transpired, with their reviews manager:

In a message dated 6/1/06 5:28:36 PM Eastern Daylight Time,
productreviewsmaster1@eham.net writes:

eHam was/is getting complaints of your repeated postings of the same
reviews over and over again.

In the past if you had posted your review once and refrained from
posting essentially the same thing over and over again perhaps the
reviews would have been allowed to remain.

Phil NA4M
eHam Product Reviews Manager

Phil,

The only reason I was posting more than once, was because your
software does
not have the capability to update an existing review, or to remove it
and post a new
one; Amazon has this capability. I am a senior software engineer, and
I know
adding such capabilities would not be difficult. I ran into a group of
disgruntled
Grundig S350 owners, and I suspect one of the whiners was, Jay Heyl, or
CBET.
Unbelieveable, that they are such babies, that they would complain
about mutiple
postings - the Eton E1 and especially the S350 have serious technical
problems.
But really, I could care less, if my reviews are removed from your
site, because it is
else where, and mirrored to many other sites. What a bunch of whining
babies !!!

Greg

I own between two hundred to about three hundred (just this week,I bought a big older model Magnavox AM/FM/Tape Player radio for three dollars at the Goodwill store,it works perfectly too) old,old radios.Any one of them that works works much better than anything ccrane pedals.How do I know this? Because I once tried out two different radios from ccrane before.Anything works better than anything ccrane pedals.

Keep the CCRadio. Its digital readout will come in handy when you know
a station's frequency but can't hear it (yet).

For AM, you need to get your hands dirty and build a rotatable loop
that you can place outside your window, with a feedline running in to
the AM antenna terminals on your CCRadio. Here's a page where you can
start, to see what you need:

http://www.schmarder.com/radios/misc-stuff/loops.htm

For FM, buy something like a GE SuperRadio. It's cheap (maybe $50) and
it has terminals for an external FM antenna. Get a rotatable
multi-element beam antenna that picks up FM stations, and put it on
your roof. Run the feedline in to your radio.

That's it. Your problem isn't your radios. Your problem is your
antennas (or lack of them).

Otherwise, get satellite radio and put the antenna outdoors, and run
the feedline in to the radio in your basement. This will probably be
your easiest choice. Ordinary AM and FM will take a lot of work, and
don't expect much in the way of AM reception until the sun goes down.

Take out the "y" and that is my legal name. It is what is on my driver license, my passport and anything else of importance.

In Spanish, the "y" between two surnames makes it as a single surname. "Campos Alcaya" would be a paternal and maternal surname. "Campos y Alcaya" would be a single surname, and "Campos de Alcaya" would also be a single surname; literally, the Campos family from the town or region of Alcaya.

Carlos Mar&#65533;a Gast&#65533;n Ram&#65533;rez de Arellano would be Carlos as a first name, Mar&#65533;a as a given name (in this case, to honor the Virgin Mary) and similar to the English "middle name" but given at the time of baptism, not birth, and then the paternal surname is Gast&#65533;n and Ramirez de Arellano is the maternal surname, like the English "maiden name."

So, Juan Carlos S&#65533;nchez Palacios would be, less formally, Juan S&#65533;nchez.

Interestingly, I learned that stuff in my first year of DXing Latin American stations.

You might try a good communications receiver/transceiver such as an ICOM,
Drake, Collins, Hallicrafters, Hammruland, etc. You would get much more fun
out of them I think.

For One and All,

Grove Shortwave (SW) Pocket-Tenna Model # ANT25
http://www.grove-ent.com/pocket-tenna.html
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9920

Designed to be a "Pocket" Shortwave (SW) Antenna for
Wideband Handheld Receivers. Also can be used as a
Throw-It-Out-The-Window "Travel" Antenna for Shortwave
Radios / Receivers.

Grove Claims :
* Remarkably Improved Shortwave and Longwave Reception
over the Factory Whip Antenna.
* Just attach the cable, run the Flexible Antenna Wire out a
Window or up to a tie point, and enjoy Worldwide Reception !
* Made of Twenty Foot (20') of RG174/U Coax Cable with
BNC Connector.
* Recommended for Icom, AOR, Yaesu, Alinco Wideband,
Handheld Receivers.

THE GROVE SHORTWAVE(SW) POCKET-TENNA - WHAT IT IS :
Basically as described the Grove Shortwave (SW) Pocket-Tenna
is simply a BNC Connector with 20 Feet of RG174/U Coax Cable
attached. The 20 Feet of RG174/U Coax Cable is has two sections
from Connector to the Tip-End. The first Ten Feet (10') is the Shielded

Coax Cable. At the Mid-Point (10') the Outer Insulation {Jacket} and
Shield has been removed from the Coax Cable exposing the Inner
Insulator and Inner Conductor. The Area of the Coax Cable where
the Outer Insualtion {Jacket} and Shield ends i covered by an Inch
of Black Srink Tubing. The second Ten Feet (10') is Un-Shielded
Inner Insulator and Inner Conductor.
This type of Antenna is often called a Snake Antenna and the design
would generally be described as an End-Fed-Dipole since the two
sections are both the same length.
Note - RG174/U Coax Cable is less than 1/8 Thick (very small Diameter).

The Grove Shortwave (SW) Pocket-Tenna can be used as a
Travel Antenna of and Apartment/Condo Dwellers Antenna
where Stealth and Limited Space are Factors to be consider
in putting up (out) a Shrotwave Antenna for your Shortwave
Receiver. For Shortwave Receiver with a SO-239 Jack a
simple PL-259 Plug to BNC Adapter will allow the use of the
Grove Shortwave (SW) Pocket-Tenna.
http://www.grove-ent.com/shortwaveantennas.html

The Grove Shortwave (SW) Pocket-Tenna is about the same
length as the Portable 23 Foot Reel {Rool-Up} Shortwave
Antennas. The Reel Shortwave Antennas are simply a 'short'
Random Wire Antenna connected directly to the Radio and
they often pick-up a lot of Noise. The Grove Shortwave (SW)
Pocket-Tenna seems to be a little quieter and this may be
due to the End-Fed-Dipole {Balance} Design of the Antenna.
TEST - At least this is my brief observation using these two
Antennas Side-by-Side with a Grundig Satellit 800 Millennium
Radio this afternoon.

THE BOTTOM LINE :
The Grove Shortwave (SW) Pocket-Tenna
http://www.grove-ent.com/pocket-tenna.html
Simple enough to build-it-yourself to play around with
and low cost enough to simply buy-it-and-try-it.

It is quite possible some of the VOA antennas are still standing. It
would cost more to take them down than to leave them alone.

I took the photos whatever day Shrub came to visit Sacto.

It's great for travelling. And when I'm not free to listen with full attention, like for old time radio shows, I can record them for listening later.

Much of what I listen to on XM is more obscure than a lot of the mainstream channels provide. And their playlists are pretty deep. Though, they've recently changed a couple of my favorite channels to something less enjoyable to my tastes.

But as an alternative to terrestrial, especially the AM's and AM noise here (and much of that content is on XM anyway), I like it.

I went to Nashville to pick up a car two weeks ago. Rode XM all the way in, and all the way back. Some weekends it's all that's on. And the MYFI (Delphi) travels well, but interfaces the stereo in the house effortlessly.

It's not for everybody, to be sure. But if you're not finding what you want on terrestrial radio, there's a good chance it's on the bird.

"An enforced set start time makes it more fair, as Extravaganza and
Charlotte have
proved. The other two should consider that... "

Well said....the greedy bastards who shop before the starting gun have
been responsible for more people not coming back than anyone wants to
admit.

And the clueless sellers who feed these buzzards are fools since it is
clear that they could get more money for thier wares if they would wait
till the starting time and raise their prices.

The ones recently felled in Portugal were taken down by explosives. The cost
of keeping them marked and lit way overwhelms any removal costs.

There is a tendancy in reviews to defend what you bought, so I don't take them too seriously. What I will do is look at the complaints and then see if it is the kind of thing that would bother me. For instance, many complain about the multiple levels of menus in a AR7030. I concluded they were old farts that hadn't progressed beyond DOS, and discounted their conclusions. But it was worth looking into before buying.

I've been to eham and I'm not impressed. If you want a review, just buy one from passport.

It was a joke anyway. Use Google. I can't keep a scorecard on a thread
with 102+ posts either...

146. FS: active antenna $40

Newsgroup: rec.radio.shortwave
Date: 2006-06-02 05:40:19 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <56CdnSzTTaDeUuLZRVn-sg@comcast.com>
Source record: 76879

I have an interesting MFJ-1020B active antenna for sale. The knobs have been upgraded and wood verneer has be put on the cabinet. overall in nice condition it actually performs quite well with the homemade big whip I have attached.
I will sell the antenna for $40 and the whip is available for $10 (really big, not tiny like the one that most active antennas come with.
shipping is extra.
in testing it did quite well using just a 9V battery. I tested it with my FRG-7700.
go here for pictures:

Heyyyyy,I resemble that remark.
Gooberhead George Noory sure is a real sho nuff Gooberhead,and that is for sure! Some night,I am going to cook up an almost believable ''ufo'' phoney baloney story and scare the panties off of that Betty Boop looking freak,George Noory.I need to think up something ''ufo'' that would be really almost halfa.. believable.

Always be very,very carefull when you are grinding.I was once grinding a drill bit and a tiny little fleck of metal grinding grit got on one of my eyeballs.I wound up going to the VA Hospital here in beautifull Jackson,Mississippi to get that piece of crap off of my eyeball.Always wear full face/eye protection when grinding anything.Save your eyeballs. cuhulin

Source record: 76887

"The Right Perspective," with Frank from Queens and John of Staten Island, airs tonight 10pm EST over shortwave WWCR 3.215 Mhz and over the Internet at www.therightperspective.com

Dubbed "New York's Most Dangerous Callers to Talk Radio" by no other than Bill Clintion himself, Frank and John never fail to deliver explosive conservative talk radio in a style that had listeners calling into shows such as Bob Grant to ask if they had been on the air yet.

Frank delievers assailing commentary on explosive issues of the day such as illegal immigration, historical revisionism and the rise of Socialism, with brash commentary and unapologetic solutions culled from a life experience, decades of following and debating politcs, and his degrees in History. One part of their show, "Hello, Africa!," developed from a segment into a full-fledged show-within-a-show, where they shed light on the Dark Continent and have interviewed such controversial guests as Dr. Lets Pretorious, Eugene Terreblanche and Henry Pinkham.

Frank and John's unapologetic stance means you will never find them fence sitting or making nice-nice with Leftist Poverty Pimps the way Bill O'Riley does with Al Sharpton. Many of Frank's key points and phrases wind up being echoed the following weeks on such shows as Sean Hannity, Michael Savage, and even Rush Limbaugh.

Hear what the other conservative talk radio hosts will be saying next week tonight at 10pm EST at www.therightperspective.com

157. Part # 2 - The Simplest Shortwave Listener (SWL) Antennas That I Know Of . . .

Newsgroup: rec.radio.shortwave
Date: 2006-06-02 09:57:18 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149242238.260256.54630@c74g2000cwc.googlegroups.com>
Source record: 76890

For One and All,

Next - Part # 2 of "The Simplest Shortwave Listener (SWL) Antennas
That I Know Of..." - The Same Idea Taken In-Side {In-Doors} and
Guess What . . . It Is Ready Made !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9929

One again this simple Antenna is a form of a Doublet {Dipole} Antenna
but it is much smaller and can be used as an In-Door Antenna for
Shortwave Listening.

IT IS THE FM FOLDED DIPOLE ANTENNA - ? WHAT ?
Hey - That is too short and small for a Shortwave Antenna !
Well Yeah and so is the Whip Antenna that is built into
every 'portable' AM / FM Shortwave Radio. When putting
an Antenna {Any Antenna} In-the-Room is all you can do;
and making an Antenna yourself is not an option; and
you Antenna Budget is under $5. You are limited in just
'what' you can do for an Antenna and your Antenna choices.

WHAT - Is very common and available and cheap that is
Ready-Made and can be used as a Antenna for Shortwave
Listening (SWL) with :
* Most 'portable' AM / FM Shortwave Radios with an 1/8"
Mono-Jack External Antenna Input -How- Remove the Antenna
Terminals and connect the Antenna Wires to an 1/8" Mono
Plug and plug that into the Radio.
* Shortwave Receivers with HI-Z 500 Ohm Antenna Terminals.
-How- Connect the Antenna Terminals to the Receiver.

RIGGING - Tape and Thumb-Tacks will hold it in place.

SOURCES - Folded Dipole Antenna for FM Radio
RadioShack Catalog # 42-2385
http://www.radioshack.com/product/index.jsp?productId=2062691
* Horizontal Arms Tip-to-Tip 58-60 Inches across
* Vertical Feed-in-Line 72 Inches long
IMAGE => http://tinyurl.com/melg5
IMAGES => http://tinyurl.com/m2qaz
Alternative Links => http://tinyurl.com/pfvcr
http://tinyurl.com/rkcro
http://tinyurl.com/pldul
http://tinyurl.com/n76xa
eBay FM Dipole Antenna => http://tinyurl.com/mzoth

BUT BUT BUT ! - IT'S TOO SHORT FOR SHORTWAVE !
YES - That is Right - So for Shortwave use this FM Folded Dipole Antenna is simply a Bent-Thin-Compresed Random Wire Antenna that terminates to itself effectively forming a Loop.
- What Again ? - Well it is not 'cut' for any Shortwave Frequency and will be used across the Shortwave Bands :
So it "IS" a Random Wire Antenna for this application.
- Why Is It A Loop ? - The FM Folded Dipole Antenna is connected to {Starts at} one side of the Radio's Antenna Input and is also is connected to {Ends at} the other side of the Radio's Antenna Input forming a Bent-Thin-Compressed Loop.
- Little But Long - What really matters is that at :
72" Out + 30" Out + 60" Across + 30" In + 72" In = 264" which adds-up-to 22 Feet of Wire in the FM Folded Dipole Antenna - And Hey one of those Reel {Roll-Up} Portable Shortwave Antennas has about 23 Feet of Wire in them.
- Bigger than the Whip - Most Whip Antennas that are built into the average 'portable' AM / FM Shortwave Radios are about 28" to 42" long and very thin. If you wanted to assign them an Area-of-Space that they occupied it would be rather small 1" X 28"-42" = 28-42 Square Inches.
-But- Now the FM Folded Dipole when it is layed-out on a Wall in the "T" Shape actually defines a Triangle 60" Across the Top with a Vertical Demension of 72" = 2160 Square Inches. The FM Folded Dipole clearly has a greater Signal Capture Area then the Whip Antenna.

FWIW - The simplest In-Door Antenna is the Folded Dipole.
http://www.kqed.org/help/radio/radio-tips.jsp
The Folded Dipole Antenna is frequently packed with new AM/FM Radios. It is fabricated from Flat Television Antenna Lead-in Material (often called Twin-Lead).
Twin-Lead is the Flat Plastic-Covered Wire - usually Brown or pinkish-clear in color. A Folded Dipole Antenna is in the Shape of the Letter "T". The Horizontal Part (the Arms) of the Letter is the actual Antenna. The Vertical Part (the fee-in-line) of the Letter connects the Antenna to the Radio/Receiver. Most often the Folded Dipole Antenna is placed on a Wall with the Vertical feed-in-line going straight-up the Wall; and both of the Arms Stretched-Out in opposite directions Horizontally. Again looking like a "T".
Experiment - Try orienting the Arms of the Dipole in different positions for best Reception. Sometimes best results may be obtained when the Arms are Vertical or Sloping. Often, the Antenna can be Taped or Thumb-Tacked to the Wall or to the back of Furniture when a good location is found.
TIP - Placing the Antenna in front of a Window or Diagonally across a Window often is a good location for the best Radio Reception.

A Simple, Efficient TV Antenna
http://www.wfu.edu/~matthews/misc/dipole.html
"How To" - Make a Folded Dipole from Twin-Lead
http://www.kyes.com/antenna/antennatypes/twinlead.jpg

Note - Folded Dipoles can be made very small :o)

RHF,

Your are both very creative and amusing. BTW, do you happen to have
either a
Grundig S350, Tecsun BCL-2000/3000, SuperAdio, or CCradio ?

Dear Sir,

Your radio is adequate. Your signal pickup is not. The greatest radio in the world will not work without a proper signal being fed to it.

An antenna outside your "windowless basement office" (presumably at your workplace) will improve your reception dramatically. I suspect, however, that installing such an antenna would be difficult if not impossible (not even to mention your employer's possible objections). If you own or rent the building yourself (in other words, it's your own business place), then the solution is obvious.

However, if I am correct in believing that you cannot install an adequate antenna at your office, you will have to be satisfied with what you can currently pick up on your radio (NO other radio will perform in a satisfactory manner with such constraints) or else resign yourself to listening to CDs, tapes. internet stations if permitted, etc. while at work.

There is no other solution.

Best,

Joe

Well, the "de" is used for females who get married - much like the
hyphenated surnames are in North America.

For instance, if I were to get married, I would become Stephanie Weil
de Goldberg. My bf's last name is Goldberg

Translated into 'merrikun, that would be the same as Stephanie
Weil-Goldberg.

Most people would learn at least a superficial version of the language.
Cuhulin, being the fellow he is, probably is not going abroad anytime
soon, though, so he probably sees no reason.

Personally, I would learn Esperanto and then condemn them all (!!!) for
not knowing the *only true* international language ;-)

With the MyFi, yes.

And do. Every day.

You do need to change antennae, but yes, I take it with me. Home,
car. Or just mowing the lawn.

Now, I'm in a big metro area, so there are terrestrial repeaters to
conver spots where the satellite signal is not reliable. Like
underpasses, and downtown.

But it's little different than carrying a walkman.

I have an XM Roady XT which has a built in FM modulator. I can unplug the unit and bring it into the house, but since I often leave it on one channel for long periods of time, I often leave it in the car and the range of the FM modulator is enough that I just listen to it over the house's radios.

I really like XM, and if you are good/lucky, you can get a year's subscription for $77.

When was the first message sent by radio that would
have made it through the ionosphere into outer space?
I figure it must have been in the nineteenth century sometime.

Or more specifically how many light years away is that first
message now?

Medieval times? Isn't that being a bit melodramatic?

218. Re: Grove Shortwave (SW) Pocket-Tenna

Newsgroup: rec.radio.shortwave
Date: 2006-06-02 19:08:55 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149275335.754638.111630@y43g2000cwc.googlegroups.com>
Source record: 77051

GW,

The Grove Shortwave (SW) Pocket-Tenna Antenna was
http://www.grove-ent.com/pocket-tenna.html
mainly designed by Grove for Hand Held Scanners or
"All Band" {HF-VHF-UHF} Hand Held Radios which
simply had a small short Flexible Whip {Rubber Ducky}
Antenna often connected to them using a BNC Connector.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9935

First the BNC Connector - Designed for Hand Held Scanners and
Radios that often use them as an Antenna Connector and Input.

Second the Length {Size} - Most of these Hand Held Scanners
and Radios will OverLoad when a Larger Long Wire Antenna :
Say a Dipole 'cut' for the 31 Meter Band is used with them
rendering them useless.
- - - 31 Meter Dipole Antenna 49 Feet Tip-to-Tip.
I would suspect that Grove did a few Trial-and-Error 'design'
{Prototype} Antennas and found that about Twenty Feet was all
that most of these Hand Held Scanners and Radios could handle
before 'Size' {Length} caused a problem with "OverLoading"
the Radio's RF Front-End.
Note - This is about the same length as the 23 Foot Portable
Reel {Roll-Up} Shortwave Antennas that come with, or can be
purchased for most 'portable' AM / FM Shortwave Radios.
Again many of these 'portable' AM / FM Shortwave Radios will
"OverLoad" when a Larger Long Size Antenna is used with them.

Third - What to call {Label} this Antenna :
1 - It is End-Fed. {End-Fed}
2 - It is made from a single piece of Coax Cable {Liner}
and designed to have Two Equal Sections made-up of the Coax
Shield and Exposed Inner Conductor. {Balanced Mono-Pole}
3 - Not Really designed to be Resonant at any Shortwave
(HF) Band and used Across the Shortwave Bands. {All-Band}
What's-In-A-Name : End-Fed Liner Mono-Pole All-Band Antenna ?

TESTING - Again in a Side-by-Side trail it was my observation
using the 20 Foot Grove Shortwave (SW) Pocket-Tenna -vice-
23 Foot Portable Reel {Roll-Up} Shortwave Antenna with a
Grundig Satellit 800 Millennium Radio that the Grove had
as good a signal with less noise then the Roll-Up.
* Roll-Up connected via the Red HI-Z Terminal No-Ground.
* Grove connected via the SO-239 LO-Z Jack No-Ground.

THE QUESTIONS :
? Is the Grove a Great Shortwave Antenna ? -NO-
? For It's Intended Use - Does the Grove Antenna Work ? -YES-
? Is the Grove Worth $20 ? -YES and NO-
-Yes- Price about Right for those who simply want to Buy It to Use.
-No- Easy to Do-It-Yourself : If you have the Skills and Knowledge
plus the Tools and Materials to build it.

AGAIN THE [MY] BOTTOM LINE :
The Grove Shortwave (SW) Pocket-Tenna
http://www.grove-ent.com/pocket-tenna.html
Simple enough to build-it-yourself to play around with
and low cost enough to simply buy-it-and-try-it.

- - - In Shortwave-SWL-Antenna@yahoogroups.com,

DaviD attemps humor via "The RollingStone"

- - - Was the 2004 Election Stolen ? - - -
http://www.rollingstone.com/news/story/10432334/was_the_2004_election_stolen

[Evil] Republicans prevented more than 350,000 voters
in Ohio from casting ballots or having their votes counted
- enough to have put John Kerry in the White House.

Meaning you didn't read it with an open mind.

Exactly how do we get anywhere if we allow them to steal election after election? I notice you say absolutely nothing about the prospects for the upcoming midterm elections.

Compared to the 'commentary' of Fox Noise, and the rest of the Right
Wing Noise Machine, it's positively subdued.

Only clueless 'tard boys believe the 2000 and 2004 elections were stolen.

Robert F. Kennedy, Jr. just happens to be one of those 'tard boys, nephew of a fellow who by all rights should have been in jail years ago.

There's another way of doing it, with an mp3 player and podcasts, such as the BBC's podcast service. The range of programmes is much wider if you're prepared to go to the extra bother of converting streaming audio to mp3. Many stations these days can be listened to via the web.

Mark, Mark, Mark - everything, even solid evidence and logical analysis, is always conjecture to true believers. Luckily, they are becoming more and more cynical, so responses such as this one are becoming more sporadic.

Wrong. You think someone buying cleaning supplies for a janitorial service in Argentina orders in English? Most business is conducted locally, and in the local language, which for most of the world is not English.

Correct. I should have mentioned that. However, there are many old Spanish
names that are based on the equivalent of "Smith from Leeds" denoting trade
and location.
>
> For instance, if I were to get married, I would become Stephanie Weil

In many places, women are not using the rather possessive "de" as it would
seem to convey property rights... as it once did, unfortunately.

I see - so, in view of the welter of evidence that you believe to be threadbare lies, you've personally done all the research to verify that your man is, in fact, the actual winner of the hotly contested races in which he has participated? You have complete comfort in knowing that your man is a paragon of morality and ethics, in his wisdom he is doing everything in the best interests of the U.S. citizenry at large, and that nobody in your party would ever stoop to rig an election, or lie to the American public about anything of importance? You have the pure faith of knowing, with the certainty of God and the wisdom of Solomon, that all is well with the current leadership?

I envy you, that your party, your exalted leader, is so perfectly in control of the situation - and that naivety such as yours must be a great comfort in times like these.

I, on the other hand, must now watch my every move, for as a public employee, I can no longer so much as point out an infraction on the part of my so-called superiors when they break a law or a regulation, lest I be demoted, fired or censured for standing up for what is right and ethical - courtesy of the Bush Supreme Court. I must look forward to the fact that eventually, my taxes will soar as I and my son and the next 18 generations of his heirs will have to pay off the monstrous nine-trillion-dollar national debt racked up by Reagan, Bush and his minions - oh, wait, that's right, the goverment can just decide to welch on their debts or print loads of additional paper money if they don't want to raise the ire of the constituency with taxes - that'll be a real shot in the arm for the economy. I must live with the knowledge every day that Bush takes orders from nobody but the Lord Almighty Himself - excuse, Hisself - and that to question anything Bush does is a slap to God's face and the spirit of America and Texas itself. I must brace myself for the fact that he and his wealthy Midas-Republican cronies, in their never-ending search for ultra-cheap domestic labor, want to open the floodgates for 3/4 of a billion illegal immigrants to pour into this country in the next 50 years to overpopulate our land with roving gangs of disgruntled youth without good jobs, so that we middle-class lackeys can support their needs for welfare, education,

and medical care on our backs. But we're AMERICANS! We can overcome any hardship, and to hell with the future, cause God told Bush to care only about today! Right?

Of course, why would you give a flying fig about all this, in your self-interested, insulated world, you who listen to radio, not for content, but just for what cute little awards you can gather? No job to worry about losing, no heirs that must inherit what you and your generation have wrought - what do you care? What stake do you have, really? Just keep twiddling those knobs, calling those uininspired names at those who disagree with you, and resting assured that your boy in Washington is doing everything he can to assure that your tiny, solidly-bounded little piece of America's future is secure in the hands of the all-knowing, all-potent Bush Republican party.

Nero fiddles while America burns.

Try attempting to pay with dollars in many countries, especially France.
They will not be impressed, and will take the sow of ignorance as an
offence.

Hell, even in the USA, a lot of business is transacted in Spanish or
languages other than English

Just as an example, I love getting sandwiches from a deli up the hill
from my place of livin'.

At the counter it's: "Una torta de milanesa de cerdo con lechuga,
tomate, pimientos, y frijoles. Sin aguacate y sin zebolla."

Translated: "One breaded pork cutlet sandwich, with lettuce, tomato,
hot peppers, beans. Hold the avocado and hold the onions."

See what I mean?

I once wanted to buy an old radio from a seller in Germany. The
transaction was conduted in mostly in German (which I speak poorly,
actually), not English.

Hehhhhhh :)

That little ball is a magnet. It's what actually attracts and catches
those snippets of radio wave that are hovering all around you.

See? That's why coat-hangers never work as antennas.

;)

And supposedly aluminium can be used to amplify certain wavelengths.
Which is why tin-foil wads on the ionosphere also improve reception.

Yes, George W. Bush actually won. Pisses you Liberals off doesn't it? You lost,
so therefore it follows that the elections were rigged.

250. Eton E1 Radio + Select-A-Tenna + Lazy Susan

Newsgroup: rec.radio.shortwave
Date: 2006-06-02 22:00:16 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149285615.775220.49720@j55g2000cwa.googlegroups.com>
Source record: 77083

Jay,

Eton E1 Radio + Select-A-Tenna + Lazy Susan
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/2970
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9944

Have you tried using the Select-A-Tenna with a Lazy Susan
using a Coupling Coil with the Collapsed Whip Antenna ?

Use an Speaker Wire Audio Cable with an 1/8" Mono-Plug
at one end to Plug into the Select-A-Tenna Model 541-M
which has the 1/8" Jack built into it.

Collapse the Whip Antenna on the E1 Radio until there is
only about an Inch or Two "Stub" Sticking out of the Case.

Wrap a thin piece of Cardboard around it and Tape the
Cardboard to from a Coil Form. Wrap Ten to Twenty Truns
of Insulated Hook-Up Wire on the Coil Form. You now have
a Coupling Coil for the Whip Antenna.

Connect the ends of Wires from the Coupling Coil to the
ends of the Wires coming from the Speaker Wire Audio Cable
with the 1/8" Mono-Plug.

Place the Coupling Coil over the Whip Antenna Stub.

Plug the 1/8" Mono-Plug into the Select-A-Tenna.

Turn the E1 Radio "ON" and then Tune the Select-A-Tenna
and Rotate the Lazy Susan for the best AM/MW Radio Signal.

This set-up may allow the Peaking and Nulling of AM/MW
Radios Stations that using the Whip Antenna alone will
not allow.

hope this helps - iane ~ RHF

Delta IV Launch Photos now online. On May 24, 2006 I was at my favorite viewing spot for rocket launches and took some photos of the Delta IV caring a GEOS-N satellite into orbit.

As with all shuttle & rocket launches it makes for a great on-scene scanning opportunity. A lot of interesting comms!

You can go directly to my photo gallery here:
http://www.milaircomms.com/gallery.html

Also have new photos of my recently remodeled shack at:
http://www.milaircomms.com/gallery.html

Enjoy,
George

> How do you do it for $77

Got promotional codes off of www.fatwallet.com in the hot deals forum. Some people have had bad luck getting the promotional codes accepted, so they called back and got a different operator who accepted the codes with no problem. Got mine at Xmas, got free activation, 3 months free, followed by 12 months for $77.

I understand the current promotional code is "WINBACK".

This is on a fatwallet thread right now:

"Thanks for this post. I bought a year's XM service for my husband for Christmas at full price, $142.45. Today I called to cancel because I could have gotten service for $77. They gave me the $77 for a year starting today (no hassles) and are refunding the pro-rated amount from my cancelled first year, so the net result is I get a $3.41 credit and another year of service. $77/year means $6.41/mo which is a great deal for XM Radio. I especially enjoy listening to XM Radio on my computer. I downloaded XaMp Desktop from http://xampd.imomo.net/ which, among other cool features, even allows my husband and me to be logged into XM radio on two different computers at the same time."

you are right I had forgooten that part and In 2000 I will now remind
YOU Al Gore was in charge of the process that completed his own defeat
by GW Bush in the first place

thank I had forgotten these things

OK then, just when were you baptized "Eduardo"?

Baptism does not = legality.

Interesting!

Even more interesting is that whilst you were on your adventures down south doin' this and signin' that everything that comes up is either David Gleason or David F. Gleason.

Wouldn't it have made sense then to be signing documents David E. Gleason or David Eduardo Gleason or even David Eduardo Gleason F., especially if one were in Mexico and/or South America if that is indeed your legal name?

Interesting as well is that you've made a political contribution(s) back in 2004 where the name recorded is David F. Gleason. Doesn't the law require one to put down their legal name?

Also interesting is that that name (David Eduardo Gleason/David E. Gleason/David Eduardo Gleason Frackelton) never shows up in anything HBC or Univision related. It's always David Gleason or David F. Gleason. Wouldn't an officer of a corporation have to use his/her legal name?

As you say on your website, you were born David Frackelton Gleason. When did you legally change your name to David Eduardo Gleason Frackelton and become a fake Hispanic?

No one's debunked it. It can't be debunked. You cannot prove with
any kind of physical evidence that george W. Bush won the 2004
election. You can't.

Lets use ink on paper ballots (e-vote optional for spastics and blind
people). Count the votes by hand, onTV. What's wrong with that?

Is there anything more sacred than our right to have fair elections?

Listen to WSM sometime. They have an awsome playlist, going back to
transcription disks of live perfomances done in the '30s

So, they carried it as audio programming on TV channels, but not
actual AM radio. The CATV system bandwidth doesn't go low enough, and
the area under Channel 2 (7 MHz to 49 MHz) is generally used for return
channels to the headend. (T channels) I used a number of them on the
CATV systems I worked at in the '80s. T-10 and T-11 were two of them,
T10 chosen with CB radio in mind.

WSM was a subcarrier on the TNN sat feed, till Gaylord sold TNN and
it turned into Spike TV. It was moved to a subcarrier on CMTV for a
while, then to Sirius. WFMT-FM classical music from Chicago was
provided to CATV systems as a subcarrier feed by United Video with their
WGN-TV uplink back in the '80s, and through the '90s. I haven't had a
C-band system up since then, so I don't know if its still there.

Sure you can. George W. Bush physically occupies the White House. Only the winners get to occupy the White House.

And heck, I've seen him here, and he was introduced as The President of The United States. Only the winners get to be President of The United States.

Mentally ill folk like yourself only get to be drug addled 'tard boys (or fake Hispanics).

Bruce,

Very well written and sadly, probably closer to the ultimate truth than many want to admit. For those that don't get it, it just proves once again that ignorance is indeed bliss.

THAT is truly frightening! Reminiscent of Nazi Germany...and it's amazing how little press it got. The sheeple should be howling mad about it. (But I guess the Supreme Court figured they could get away with it after they pulled off that wonderful ruling about 'eminent domain').

Jeeze. You are obsessive. When I was baptized, the name was amended to the
birth record. Baptism usually occurs when one is a newborn, in case you had
not noticed that, too.

Broadcasting freedom from the great lakes

- Signed off

ID'd: Rangar Radio
~~~~~~

Ragnar Radio
Posted at 7:05PM on Saturday, January 3, 2004 in hf and pirates.

Sunday, January 4, 2004, 0010, 6950 USB. Ragnar Radio. Zappa's "Dirty Love" at 0014. "This is Ragnar Radio" at 0016. At 0017, Ragnar Danjo[?] mentions he's running without a monitor and by candle light. "Broadcasting freedom from the great lakes" with a bit of Judas Priest "Breaking The Law" at 0051, followed by what sounds like Iron Maiden. Maiden's "Number of the Beast" at 0106. Signal 333 at start, improving to 455 by 0050. Off at 0110 with a "Breaking The Law" snippet. Great show!

Because I only "use" the name informally. J. Edgar Hoover did not use his
first name, out of preference. However, for the web, I thought it was better
to use both given names, as there is already a "David" on here... and many
other boards.

One can sign pretty much as they want. My signature is just DEFG. No other letters. Had it since I was about 13.
>
> Interesting as well is that you've made a political contribution(s) back

The law does not require all the names. Billy Bob Smith can donate as Billy Smith. In the continental US, using a maternal surname confuses people. It is easy to go with convention in such cases. On the internet, I can be Michaelangelo, if I want.
>

That is the version I use in English. In the continental USA. My ecuadrian licences were in the other "format." This is like certain Asians, who put their family name after the given names when in the US, since most Americans do not adapt to the family name coming first. Or Russians who drop the partonymic which is also not well understood.
>
> As you say on your website, you were born David Frackelton Gleason. When

I did not. My parents baptized me with the full name, a part of which I did not use until recently.

Man, what an obsession. I could rename myself Madison Monroe Gleason if I wanted to on the internet... who cares?

Sorry, "show" as you no doubt knew. But then again, the French think most
Americans are LESS cultured than a sow, so the slip may be Freudian.

You are better off using a handle on Usenet so kooks can't track you
down and cause trouble in your life.

I would not post from work either so kooks can't find out the workplace
address.

Instead of using my real name I decided to use a handle and besides it
was a chance to give myself a name to be known by that I choose.

But you said earlier that your legal name was David Eduardo Gleason Frackelton.
Are you now saying that it's David Eduardo Frackelton Gleason (DEFG)?

Here's the quote with my comments in brackets:

"I am David Eduardo. And that is followed by my paternal [Gleason]
and maternal [Frackelton] surnames, just as on my passport, driver license and
even Cedula de Identidad from Ecuador."

> message now?

That's a good question and almost impossible to answer with certainty. It depends on the transmission frequency, antenna configuration and the condition of the ionosphere at the time. Spark gap transmissions are rich in harmonics (many frequencies) so it's possible that some portion of a spark gap signal was able to pass through the ionosphere, most likely the higher frequencies. In that case it's been about a hundred years since we announced are presence to the universe. That would put the signal at 100-light years away, which includes more than two thousand stars in our region of the galaxie. However the chance of intelligent life on a planet orbiting one of those stars is extemely small, so it's not likely that anyone has received our first radio transmissions yet. I suppose you can't rule out the possiblility that someone passing by in their spaceship may have heard it. ;-)

In Hispanic culture, it is paternal followed by maternal. In English culture, it is paterna at the end, and, usually, a middle name. Since my middle name is also my maternal surname, I use it in the PROPER order depending on the contest.

All four names, two given and two surnames, are on all my documents. Depending on the situation, I use the proper order of the surnames. Just, as I said, an Asian may put his family name last when in western nations, but use it first in Asia. They are still the same names, just put in the proper order for each location.

For a supposed international DXer, you seem to have no clue on how names vary in different nations.

I've got one of those Sony windup radios. It is very well built, recieves Am and Fm quite well and everything about it feels well crafted. My only gripe is that it does not have shortwave. That is why I have a Grundig FR-200 and a Kaito WRX-911 which is very frugal on two AA batteries and in an emergency, I could run it off an external solar cell if need be.

$500 for a top-of-the-line receiver, without DRM ! The SW bands, in a few years,
will be pretty much useless, can't AM/DX without an external antenna, can't
receive satellite radio without an external antenna - this receiver will be useless,
in a few years !

Gore wouldn't have ignored all the warnings and 9-11 never would have
happened.

Iraq is a disaster. Afghanistan is a disaster. The economy is a
disaster. The environment is a disaster. etc.

All Bush worries about are his poll numbers.

Gore and His boss Clinton DID ignore the worning he had

aloowed Saddam to throw up the Un inspector and give saddam year to
play games and prepare for theday some US president said enough
>
> Iraq is a disaster.
it is better than it was and geting better

and the direct responbility of Clinton refusing to the job when he had
it
> Afghanistan is a disaster.
ditto
> The economy is a
> disaster.
it has taken some hits but not by the president hand

but frankly it doing that badly certainly better than I ewould have
expectedif you told me in 2000 that 9/11 katrina and Rita were going to
happen
> The environment is a disaster. etc.
what disater I was there nothing changed in the enviomentsuddenly at
his inaguration
>
> All Bush worries about are his poll numbers.
One think he worries about more than that but he IS a politicain like
or not he abilty to act relies in part on his poll numbers

I'm not picking on anyones 'name'. I'm picking on them because they're a fake Hispanic.

Run along now, I think you might just make it to Comprehension 101.

Sure, that's why they have the Catholic Bible, and Christians have the
Holy Bible.

(OT) : Revisionist {Make-Believe} History According To DaviD

The Democrat Party of the USA "Blame Game" :

* Gore wouldn't have ignored all the warnings
and 9-11 never would have happened.
- - - Blame Bush his is and Evil Republican !
DaviD - What lead up to the 9-11 Attacks was 8-Years
of the Clinton-Gore Administration which allowed all
the Planning for 9-11 to happen.

* The economy is a disaster.
- - - Blame Bush his is and Evil Republican !
Note - Except of Oil Prices the Economy is Doing Great
and the Two Biggest Factors for High World Wide Oil
Prices are DEMAND from China and India.

* The environment is a disaster. etc.
- - - Blame Bush his is and Evil Republican !
DaviD - Polluted Liberal Minds - See a Polluted Dying World.

Thank You - God {Allah} for this Wonderful Country
(USA) and this Beautiful Living World - Amen ~ RHF

That is the one sign of hope. It isn't even the trolls or troll-lites like Axe that bother me, it's the apathetic Americans that still believe in rationalization and self-delusion as a way of life. Right up until the bottom falls out in the personal life, they refuse to acknowledge the coming disaster and commit to soldiering on, even when getting mad and becoming an activist could have positive benefits for themselves. They refuse to believe they can change anything so they don't bother trying. Oh well, it's not like it isn't human nature. After all, there are always people still living near a volcano when it blows.

As for the trolls, Google Groups can give you a trolls USENET record. If he posts over 1000 posts a month, I figure he's either got way more time on his hands than you do or he may even be paid to spread disinformation through USENET. Either way, he can't be outposted even by a group of people. All we can do is pick apart key points and otherwise demonstrate his silliness to the lurkers and otherwise ignore him. Even better is never post to a single post since it drives these guys up the wall to try to start a thread and be completely ignored. Any other behavior is actually playing their game.

> Hispanic.

Let's define this again.

"Hispanic" is not a race, because there are Black, white, Asian and
Indigenous Hispanics, and all many or combinations, too.
"Hispanic" is not an ethnicity, as it is not confined to a single region,
geography or origin.
"Hispanic" is not a nationality, as there are Hispanics from about two dozen
countries.

"Hispanic" is a loose and broad culture, based on elements of lifestyles and
language, whether by heritage or practice.

Mr. Fujimori was Hispanic, Asian in race, Japanese in ethnicity and
president of Per&#65533;, to cite one example.

A person who spends nearly all their life in one cultural group will become
a part of it. Schwarzenegger, Kissinger and Andy Grove would be examples of
this. I did the opposite... I seldom had contact with Americans (in the US
sense of the word) for over 4 decades... including my family life.

Again, for a purported DXer who hides behind an anonymous and egotistical
screen name, you know very little about other nations, cultures, customs and
behaviours. Most good DXers I have met over the years have had a broad world
view, and understanding of different cultures, and a contact with many
languages and, moreover, were respectful of other ways of thinking.

None of what you just said has anything what so ever to do with the fact that
YOU are a fake Hispanic.

Come on back when you get your panties out the knots that they are obviously in
and give it another try!

That is an area open to interpretation, with the "Upon (on) this rock I will
build my Church" statement lending itself to debate. Of course the Coptics
were (also) first. My point is more that the poster wrote as if Christians
and Catholics were of a different faith. They (we) are all Christians.

but not all christain other the years have indeed worshiped the same
god
Gnostics Bogilmils and some other sect of christain do not even accept
the trinity notion of God orwith dualist Mode being comon in the
desenting opitions although western Europe largerly adopted the
ctahloic orthodux traditioon it did after a fair number fo gryrations
about the very nature of God

RHF,

So, did you purchase an Eton E1 ? All you had to do, was to purchase
a Sony 7600GR, for $150, and a satellite radio for $100 - you could
have saved about $450,
including, not having to buy two external antennas !
Eton/Grundig/Tecsun sure is taking suckers !

355. Re: Negative comments about Plastic radios will get you plonked.

That's a Radical Right difference without a distinction.

Rather than address the core issue you drive the discussion into the
ditch. You are an anarchist and a traitor.

On June 22, 2001, President Bush spoke briefly about terrorism during
a speech in Alabama, but used the word "terrorist" to describe rogue
nations, not terrorist organizations like al-Qaeda, and to gain
support for his National Missile Defense policy.

"It's time to come together and to think about a new security
arrangement that addresses the threats of the 21st century," according
to a transcript of Bush's remarks. "And the threats of the 21st
century will be terrorist in nature, terror when it comes to weaponry.
What we must do - freedom-loving people must be willing to think
differently and develop anti-ballistic missile systems that will say
to rogue nations and leaders who cannot stand America, or what we
stand for: you will not blackmail us, nor will you blackmail our
allies."

Meanwhile, as the administration continued to focus on the
re-making the Middle East, the CIA sent President Bush a daily
intelligence briefing on August 6, 2001, saying the agency had
"detected patterns of suspicious activity in this country consistent
with preparations for hijackings," no one in the administration acted
on the report.

The subject title on the memo says more in a few words than the
likely illegal NSA domestic spy program Bush and Cheney claim would
have helped prevent 9/11 if it were in place back then: "Bin Laden
determined to attack inside the U.S."

But that did not appear to have an impact on President Bush's
domestic agenda. In an August 31, 2001, speech Bush gave to celebrate
the launch of the White House's new web site, national security was
last on a list of major issues Bush planned to deal with, according to
a transcript of his speech.

My guess, the 1st FET is blown in the RF amp circuit. The
radio was probably left on during a thunderstorm and a nearby
lightning strike took the FET out. Been there done that with an
old RS reciever. On the plus side its a fairly easy and cheap fix.
You'll need a schematic or service manual to do it yourself.
Start at the antenna input and start working your way back to
the first FET and check it. FET's dont like voltage spikes.

Jeff

376. WFAN 660 gone? 3am in Ohio

Newsgroup: rec.radio.shortwave
Date: 2006-06-04 06:52:46 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <44828333.655F@mindspring.com>
Source record: 77009

There's no sign of NYC's WFAN 660 in Central Ohio, at 3am Sunday
morning.

Faint Cubans are audible.

Lots of distant thunderstorm static, so propagation to somewhere
is good.

From: John Plimmer <plimmer@telkomsa.net>
Message-ID: <e5u9v9rhg1@ctb-nnrp2.saix.net>
Source record: 77012

I have owned all the Drake R8 series, but have not had the Sherwood as it requires an IF of 455 KHz, and therefore won't work on the Drake R8 series RX's.
Those that have owned a Sherwood love it.
The Drake R8 had a "fair" sync detector that didn't have sideband selection and was prone to loose lock on weak signals.
The Drake R8A had a useless sync detector and that is why Drake soon replaced it with the R8B.
The R8B sync detector which was sideband selectable was awesome and delivered great audio if you hooked it up to your stereo unit. Also locked onto signals like a bulldog to a bone.

There was also a long thread on this newsgroup that claimed the AOR 7030 had the best sync detector in the business, but I still punt the R8B as the 7030 sync was NOT sideband selectable, which is required for most good listening.

Owners of JRC NRD's which have poor audio were particularly impressed with what the Sherwood did to their audio reception.

I'd have to disagree with that one. I've an R8, R8A and an R8B here currently
and the sync on the R8A seems to operate the same as the R8, which I've never
found to be to bad at all.

I don't hate anybody. The situation with the President is a serious
problem but there is no call to get wildly emotional about it. One
needs to step back and take an honest objective look at things and act
accordingly. The ''untermenschen'' reference was satire. This is how
brainwashed Republicans view anyone who disagrees with their warped
philospohy.

To frame the concern of true patriots as ''hating the president'' is a
tactic used by the usurpers. Do you hate John Gotti? Same deal.

384. Re: Elimination of CW is a loss in the number of ways we can communicate with other.

The FCC is not requiring specific testing for PSK31, RTTY,
Hellschreiber, Olivia, etc. and all those modes seem to be used pretty
extensively on all the bands. Not to mention, programs like MixW and
especially MultiPSK do an excellent job of sending a receiving CW. I see
all the modes continuing to flourish in the future even if a specific
test for one mode (CW) goes away.

RHF,

I don't need to own a radio, to tell it's not worth the money. If
you already had the
Sony, what was the point of pissing all that money on the Eton E1, with
all its
shortcomings ? Doesn't even have DRM ! Home Run ! I can read
reviews,
dumbass ! You could have saved many hundreds of dollars and bought a
$100
satellite radio, instead. Oh, but I guess you have to have the
latest-and-greatest !
So, the E1 is too expensive to have a backup - so what are you going to

do,
if you drop it, or get a blemish on it ? The Grungid/Eton/Tecsun
receivers are
over-hyped, over-priced receivers - look at the Eton E10 -
single-conversion
without SSB, for $120 ! The E5 is $150, without synchronous detection
-
the 7600GR, $150 with it ! Home Run # 2 ! I wouldn't be so stupid to
purchase/piss away money on the E1...

388. DE1104... where is it?

That is your opinion, based on a mountain of misunderstood factual data...
which is your custom.

It seems that being dismissed or disliked by you is something of a badge of
honor. I am in good company with the Canadians, and all the others you hate
(about 99.999999999999999% of the population of the world, it seems).

You are just a rude boor with a radio.

the concern is obvious for decades the CW crowd has relied on the
requirement to force all ham to at try it. mode welfare. they are afaid
without that stick the mode will die . it show a lack ocnvednce in the
mode

Even if I could learn the CW, I'm too stupid to pass the written test.

I have this congenital problem, you see. Life is NOT good for me.
I suffer from Microcephalic Dwarfism and I've been afflicted with it since I
can remember.
Definition: These syndromes associate growth retardation with
microcephaly and various facial anomalies.

My forehead is smaller than that of a normal person and my cranial cavity is
little larger than that of a Florida orange. My sloping forehead has only
one advantage in that it allows me to insert it into my rectal cavity with
little or no pain. While less than comfortable, and while it impedes clear
speech I am able to keep my ears warm in the coldest of climates, but those
are the good points.

I have suffered from extreme retardation all my life and have recently been
considering placing my head in the oven. I am betting that the accumulated
yeast in my mouth will aid me in blowing my head off at 350 degrees, thus
ending it all.

You guys have no idea of what torture it is to live with my afflictions. You will miss me when I am gone.

Eeeeee yeowwwww,now I know what that new ugly looking building is that I saw last October in beautifull down town Jackson ,it is the Mississippi TelCom Center.There is a article about it with a picture and a Tour the Center link in the Business section of todays www.clarionledger.com and www.devilfinder.com Mississippi TelCom Center if y'all want to check it out.

A much better devilfinder.com search is,Cool Buildings of Jackson

I dont like them new ugly looking buildings,I like old style.
In the SouthernStye section of the Clarion Ledger,there is an article about BBC to broadcast news show in U.S.,by David Bauder,The Associated Press.

I don't hate freedom. I hate sore losers that think the election was rigged.
Men in my family have fought and died in every war this country has been in
so I don't take freedom too lightly you stupid Canuck.

419. 3215 audio check

Newsgroup: rec.radio.shortwave
Date: 2006-06-04 20:43:11 UTC
From: N9NEO <yzordderrex@verizon.net>
Message-ID: <1149453791.794579.276920@g10g2000cwb.googlegroups.com>
Source record: 77301

I ran across 3215 the other night on my portable and Alex Jones was quite distorted. I think one of those very late night Christian gloom&doomers that I like to listen to was also quite distorted on same freq.

Sounds like overmodulation kinda distortion that would produce splatter, or could it be some kind of distortion related to fading??? I haven't a decent radio since I foolishly sold my R8B - the wife has these misguided notions that paying bills on time & feeding the kids is more important than SWL.

Radio is a DE1103. Haven't checked it out on the R75 - but is unmodified, so it's gonna be distorted anyway. I think Kiwa has some mods for 1103 audio distortion so I think it could be radio.

If I were to get on 75m with that kinda audio they would tell me to stick to the telephone.

John Plimmer wrote:

< There was also a long thread on this newsgroup that claimed the AOR 7030 had
the best sync detector in the business, but I still punt the R8B as the 7030
sync was NOT sideband selectable, which is required for most good listening. >

Dear John,

Contrary to what you write, the AR7030's synchronous detection circuit IS most definitely sideband-selectable and features double-sideband detection as well (so does the Drake R8B). It does not feature a "fixed" sideband selection as does the Drake R8B (or the Drake SW8/Grundig Satellit 800), but rather a "variable" one using the passband tuning. (You can tune the circuit this way as well on the Drake.)

A good argument could be made that the Drake's sync circuit thus has more options - but I have found that using the variable selectable sideband on the AR7030 Plus offers much better control. I should think the same would apply to the Drake R8B. You will find the sound to be slightly better and the lock to be somewhat more robust when you tune this way - you use the passband offset at the minimum distance necessary away from true center rather than at some "fixed" offset determined by the factory. (The Drake's circuit will make a low-pitched noise as you tune this way [the AOR's does not] but when you reach the desired passband offset, the noise goes away and the sync circuit stablizes.)

Neither of the circuits, however, are "perfect." The Drake circuit often "warbles" (my very poor term but you know what I'm talking about) - especially noticeable on musical notes - as the signal varies in strength. The AOR circuit "hunts" and momentarily "mutes" as a station is changed (NOT, however, when using the free RxWINGS computer-control program). But it then stays "rock-solid" regardless what the signal subsequently does.

The AR7030's sync circuit does not "struggle" to maintain lock as does Drake's circuit.

AOR's "shortcoming" has been verified to me as being inherent by Richard Hillier of AOR-UK. Drake's "shortcoming" has been verified to me as being inherent by two different service technicians at Drake.

PLEASE NOTE that these so-called "shortcomings" are minor in nature in the overall scheme of things and should certainly not be blown out of proportion. Either one of these sync detectors is far better than any other currently being offered today (with the possible exception of that Sherwood SE-3, with which I have no experience - though about which I have read only very good things) and I use both of them - one on my AR7030 Plus and the other on my Grundig Satellit 800 (which uses the same circuit as the Drake R8B, the sole control exception being not offering double-sideband detection).

Of the two, I much prefer AOR's. And note this well - I'd rather have SOME sync circuit than NO sync circuit!.

Best,

Joe

P.S. to RHF (after all, it's your post!): Sherwood can install a 455 kHz output on your Drake R8B should you wish to incorporate an SE-3.

Yup, just terrible the way that one 5 foot four, 130 pound woman beat up
those two cops.

> If It Acts Like A Kook If It Walks Like A Kook If It Talks Like A
> Kook HEY - IT "IS" A KOOK ! { As Crazy As It May Sound :o}

So, just because she states her political views, that makes her a "kook"?

She was being punished for wearing an anti-Bush t-shirt?

> When Fisher began to explain her opposition to psychological testing,
> [Judge] McGinty stated: "I do not negotiate with felons."

The judge considers her a "felon" even though she has yet to have a
trial? Can you say "innocent until proven guilty"? Sure you can!
(although it seems like the "judge" can't)

They didn't allow Ms. Fisher her phone call?

Can you say "Fascism"? Sure you can!

Can you ask what happened to freedom of speech? Sure you can!

And if you don't think the above *is* fascism, you're crazier than you
purport her to be.

> Hey just may be She is not a Left-Wing Criminal -but- Simply another
> "Liberal Kook" who needs Her Meds !

...or maybe she just wants to exercise her right of free speech. My,
what a novel thought!

No, you hypocritical fuckwad.

People who pretend to be patriotic Americans while promoting a ''New
World Order'' are the usurpers. The people that morons like you
worship.

Yep, lose because the voters rejected you, then claim that it was all rigged.

That's the only plan that the Liberal/Democrat has!

"We're entitled to rule, no matter what the voters think"

Yeah, that's a 'true patriot'.

Apparently, the Demo's feel American's aren't upset enough with the war on terror, that they got to try and bring back the draft in order to try and get the anti-war protests going in earnest.

John Kerry no doubt will be speaking for Jane Fonda.

443. (OT) : There is "Hispanic" and there is 'hispanic'

Newsgroup: rec.radio.shortwave
Date: 2006-06-04 22:32:12 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149460332.274861.208700@i39g2000cwa.googlegroups.com>
Source record: 77325

DX Ace,

There is "Hispanic" and there is 'hispanic' and from what
I have read about David {Eduardo} Frackelton Gleason :

At David Gleason .Com
http://www.davidgleason.com/
http://www.rtnda.org/resources/radioupdate/spring2000/main-article-text.html
http://www.medialifemagazine.com/news2002/nov02/nov11/5_fri/news2friday.html

By the guidelines generally used to define a "Hispanic"
in the USA by the Federal Government 'He' { Señor }
David "Eduardo" Frackelton Gleason is a Hispanic [.]

DX Ace,
You may view Him as a 'want-to-be' "Hispanophile" -but-
His Life's Work in Spanish Radio Broadcasting and His
Daily Living do qualify Him to Rightfully Claim that He "IS"
Hispanic {an Hispanic} [.]

WRT - IBOC and DXing - As part of the DX Radio Community
'we' may not like IBOC AM Radio -but- for the Owner's of AM
Radio Stations IBOC AM Radio is a valid business decision
with respect to 'their' Local AM Radio Markets and the Local
AM Radio Listeners that 'they' hope to attract as Listeners.
FWIW - Commercial AM Radio Broadcasting in the USA is
"About" Local Business Marketing within a City/Town, Area
or Region. DX {Distance AM Radio Listeners} are Not part
of 'their' Business Model [.]

for what it's worth that how i see it ~ RHF
.

I hope G.E. doesn't build jet engines, with the same quality, as its SR
radios !

For One and All,

With-Respect-To : IBOC AM Radio -vice- AM Radio DXing

As part of the DX Radio Community 'we' may not like IBOC
{High Definition} "HD" AM Radio Broadcasting and the
resulting adjacent Channel Noise that it will create;
that will make AM Radio DXing [Distance AM Radio Listening]
very-very-hard-to-do or completely impossible.

- - - B U T - - -

For the Owner's of AM Radio Stations IBOC AM Radio is a
valid business decision with respect to 'their' Local
AM Radio Markets and the Local AM Radio Listeners
that 'they' hope to attract as Listeners.

Commercial AM Radio Broadcasting in the USA is "About"
Local Business Marketing -via- Radio within a City/Town,
Area or Region to 'reach' Local Radio Listeners.

DX {Distance AM Radio Listeners} are Not part of 'their'
Commercial AM Radio Broadcasting Business Model [.]

IBOC AM Radio and DXing - Three Things To Remember :
First - 'we' {DXers} are few
Second - They {Local Listeners} Are Many
Third - The Bottom Line = It's About Busine$$!

for what it's worth - that how i see it ~ RHF

The Nissan factory North of Jackson (between Jackson and Canton,at the I-55 Gluckstadt exit) was having a quality control problem for a while.Scratches and dings on the paint jobs.So they made the people who work on the assembly lines stop wearing rings/jewelry and metal belt buckles and anything metallic on their clothing.That solved that problem.

why me the ham to whom you repsonded?

none at all
why do you ask?

but it is clear from LONG term expousure to the cw Forever crowd many
of them lack much confidence that the mode can survive without the
stick of code testing to make hams try it out

futhermore if CW die it will be becuase of the atitdues of it's
advocates

RHF,

This is a false assumption - with the United States AM stations being spaced 10 Khz apart, IBOC will only have minor effects on the 50K watt clear-channel stations. The digital part of the IBOC is included in the stepped-up sidebands, but drops off/fades, unlike the main analog lobe:

http://beradio.com/features/radio_running_interference/

Do your homework, before you post !

Carter propagates one More Liberal Lie :
[The judge considers her a "felon" even
though she has yet to have a trial?]

The-Facts-In-Evidence-Are :
1 - Carol Fisher was Arrested for a Felony.
2 - Carol Fisher has been Tried for a Felony.
3 - Carol Fisher has been Convicted of a Felony.
4 - The 'Psyc-Exam' is a process that is done
as part of the Pre-Sentencing Investigation.
5A - She Gets Help with a Medical Problem and/or
5B - She Does Time for Her Crime.

yes the truth is that simple ~ RHF

The judge considers her a "felon" even though she has yet to have a
trial? Can you say "innocent until proven guilty"? Sure you can!
(although it seems like the "judge" can't)

That married Irish woman wayyyy over yonder across the big pond in England said the Walgreen's stores over there dont sell the kind of Maybelline mascara (Peach Daiquiri) she wants to buy.She said she will order it from a Walgreen's store or Maybelline in America and have it sent to me and I can send it to her.

I told her there is no need for her to go to all that trouble.There is a Walgreen's store a mile and a half from me and two other Walgreen's stores within about four or five miles from me and four or five more Walgreen's stores in the Jackson area.I can go to a Walgreen's store near me and buy that mascara and send it on over to her.It would get there in about a week.

Agreed, RHF, the E1 is an outstanding portable receiver: indeed, a better performer than such respected receivers as the Sony ICF-2010 and ICF-SW77. Performance-wise, the E1 is more in the league of a Drake SW8 or a (properly functioning) Satellit 800.

> Home Run # 2 - Yes - I Own a Eton E1 XM Radio !

> .

Funny how the E1 and E5 are now being referred to as "Eton/Grundig/Tecsun" by this guy. As noted long back in this group, Eton is nothing more than a marketing/distribution company for radios made by various manufacturers. The E5 is no Tecsun set, nor has it in any way ever been associated with the Grundig name. Rather, it's the Degen DE1106, which Eton bought the rights to. The E1, similarly, has no connection to Tecsun. The E1 is manufactured by BEL and, according to Monitoring Times, Drake had a hand in its design (no doubt in the flawless sync detector that has been incorporated into the E1). The only connection the E1 has to Grundig is that its packaged in the shell of the never-to-see-the-light-of-day Satellit 900.

In any case, if that smithwhisper/sidwellfriends guy can receive all he wants to hear on the 'SW7600GR, then good for him. If you don't have the need to upgrade, then why bother. And since he seems to be into DRM, then he can get that Kchibo radio.

Great resource, your Eton E1 Yahoo group, RHF....it's very much appreciated.

I don't seem to have that post by "me", but he is right, and our
founding fathers gave us the solution to this problem.

We hold these truths to be self-evident, that all men are created equal,
that they are endowed by their Creator with certain unalienable Rights,
that among these are Life, Liberty and the pursuit of Happiness. ï¿½ That
to secure these rights, Governments are instituted among Men, deriving

their just powers from the consent of the governed, ï¿½ That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness.

If you're part of the solution you're part of the problem.

This will not be tolerated indefinitely. If the people lose
confidence in elections, the consent of those governed may next be
decided in the streets.

If your description (above) is technically accurate, the 7030 does not have a 'real' sideband sync' detector because it requires using the passband tuning to select the desired sideband in the double-sideband mode. The sideband sync' detector on the R8B uses phase cancellation for rejecting the unwanted sideband. This is a more effective rejection method than using only passband tuning.

Go to http://www.heartlandamerica.com/ and type Eton in their homepage
search box. It will take you to both of the Eton radios they sell,
including the E1XM.

But are you arguing semantics, or outcome? Because the phasing method
of selectable sideband reception is not as good as the filter method.
A filter really knocks out the unwanted sideband, while the phasing
method tends to give far less rejection of the unwanted sideband.

Michael

Here is the guideline:

A person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture of origin, regardless of race.
-

It is NOT his culture of origin. It may be his adopted culture, but certainly not his culture of origin.

It is not a semantics argument. On the R8B you can pick the side band to
listen to and tweak the passband.

Often if I am bother by a heterodyne or splash from an adjacent channel
I can pick the opposite sideband and the interference is GONE. The
AOR7030+ can't do that.

Nope. The American /USA/Federal Government definition of a term that was basically invented in the USA is based on Spanish langauge and culture or a heritige that has descended from siad language and culture. It has nothing to do with blood. And if it did, since I am part Iberina Celt, I pass that test too.

In fact, your wrong definition fails to recognizee the 15 million or so Hispanics born in the USA.

> It is NOT his culture of origin. It may be his adopted culture, but

> his culture of origin.

The definition used officially in the US does not have anything about "origin" in it.

A sync' detector which implements sideband rejection using the
quadrature method (phase shifting) allows the user to select one of two
signals (either sideband) which are 180-deg. out of phase. This is a
more effective way to reject the unwanted sideband of an AM signal than

using *only* passband tuning. In the case of the R8B you can reject the unwanted sideband much better with the selectable sideband sync' than by using just the passband tuning. It occurred to me that we may be talking about different subjects, since you referred to phasing and filtering, which are two methods of bandwidth selection.

< Snip Troll crap >

The guy is a Trolling nut case so put him in the kill file instead of
responding to him. Don't you realize that you and others that respond to
him are the only thing keeping him around?

People normally stay away from nut cases. I'm sure that when you see
someone in person acting unhinged you do your best to get away from them
as soon as possible.

Well, do everyone else that uses the news group for on topic discussion
a big favor and stop giving the Trolling nut cases the attention they
crave. You are giving them a reason to stick around trashing the
threads. If you would just ignore them they will leave and bother
someone else that pays attention to them.

At least sip their crap for the people that already have them in the
kill file.

Both methods have their limits to unwanted sideband rejection.

For the filtering method, no physical filter has infinitely steep sides, so
closer to carrier, the unwanted sideband rejection can be poor if you do
not want to also lose part of the desired sideband.

For the phasing method, the unwanted sideband rejection is based upon the accuracy of the phasing network. The better the network, the better the results.

So, to say one is better than the other is challenging. If you wish to say one is better than th other, you will need to describe the two specific implementations in great detail. This must include the characteristics of the filters and phasing networks over the range of interest. Deetailed measurements of unwanted sideband rejection vs. frequency would be good to see.

Some programs on WWCR have crappie audio. I don't know where along the
line from production to transmitter input things go bad but it happens
all the time.

You should be able to pick up other major SW stations with good audio
reproduction and know whether the DE1103 has a problem or not. If other
stations sound good then the problem is not your receiver.

I don't think that a business model that exchanges current listeners for
the "hope" of attracting new listeners that require them to buy new more
expensive radios is a good plan.

When you go for one sideband, you need to select a narrower filter (technically half the bandwidth). This works just fine on the 7030+, used with passband tuning. Also, the 7030 VFO is so steady you can pick USB or LSB, then zero beat it. This works on shortwave, but seems to add a flutter to AM BCB.

The Sherwood for sale on ebay may not be functional or in good working shape as it is being sold from a drop off site rather than the user. I have no problem passing on this sale.

Once everyone is IBOC, the hash heard from any less than ideal location
will probably lead to XM sales. The destruction of the educational
portion of the FM band to religious scam artists is enough to make me
get XM just for travelling. One year's XM fee is like a tank and a half
of George Bush priced gasoline.

Like any functional feature in a receiver the effectiveness varies depending on the reception situation. Sometimes shifting the passband or selecting the sideband works best. The Drake just has another tool that the AOR 7030+ does not have and sometimes it make a big difference other times not.

I can borrow the Kiwa again, but I really rather not waste my time screwing with it. It was overpriced at $400 new, now the ebay prices are just plain silly.

As I have played with all three (Kiwa, the older Quantum, and my tweaked ALA 100 multiturn loop), I feel quite confident in my assessment. The Kiwa simply lacks the aperture of a stock Wellbrook, let alone a multiturn Wellbrook.

Usually the passband tuning is all I need to get rid of adjacent channel interference and the AOR7030+ and Drake R8B both have this ability. A neat thing the AOR can do is auto notch a heterodyne tone. Additionally the AOR will track this tone and keep it notched out if it drifts. The Drake has a manual notch that is pretty sharp. I usually don't have to do this because moving the passband usually solves the problem but I have had the situation where I have splash on one side a heterodyne tone from another station on the other sideband so both functions are needed.

The AOR 7030+ can auto tune itself to a station and maintains lock on it without intervention and it has the auto notch feature the Drake does not have where the Drake has the sideband selectable sync.

Every radio has its pluses and minuses and will work better in some situations, is easier to use, or sound better than other radios.

>>While technically "Hispanic" is a linguistic category (i.e., speaking
>>Spanish), for all intents and purposes the term "Hispanic" is used to
>>describe Mestizos from Central and South America. Mestizos are hardly
>>part of the White Race. Mestizos are the mongrel spawn of an unholy
>>union between horny Spaniards and Amerindians that occurred hundreds
>>of years ago.
>>
>>In fact, Mexicans THEMSELVES claim to be a separate race. Just ask
>>one. Look at the insurgent Mexican organizations, such as LaRaza,
>>MeCHa, and the Aztlan movement, that are part of the current Mexican
>>invasion of the USA. They all freely admit their purpose is to destroy
>>White America.

"Raza" in this context means " brotherhood" or "the people" and does not
refer to a scientifically defined race. In fact the term in Spanish also
meens "breed" as in cats, dogs and livestock.

The Aztlan movement _is_ the MEChA movement... a leftover form the militant
70's and on the wane. The members are Chicanos, not Mexicans. A Chicano is
an American. There are no immigrasnt Chicanos. There are no immigrant
MEChistas. The terms are exclusionary.

>>Even if you could argue that genetics do not support classifying
>>Mexicans as a race, IT DOESN'T MATTER BECAUSE MEXICANS BELIEVE
>>THEMSELVES TO BE A RACE AND ARE ACTING ACCORDINGLY, viewing the White
>>Race as an enemy.

You are basing this statement on a "visual" translation of a word, which
does not mean what you think it does. "Raza" does not include all
Mexicans... it is a term for working class Mexicans, and is the equivalent
of the term "pueblo" in other places in Latin America. Or, in English, "the
people" or "the working man." Not "race" as in Asian or Black or white.
>>
>>Question is, who do Whites have left to represent them in government?

I did not know that "white" is a protected class. And I did not know it was
necessary to preserve a particular race.

>>Your race is your nation. Japanese, Chinese, Arab, Jew, Black,
>>Mexican, in fact every country except White democracies, know this
>>truth and their governments act accordingly to protect their race.

All of Latin America is of widely mixed race, ranging form white to Black to Indian and even a bit of Asian. There is no dominat race... there is a spectrum.

The Americas, unlike Europe or Asia or Africa, were populated by a mix of Europeans (whose diseases leveld the relationship between European and indigenous) and the native peoples, plus a lot of later-day immigrants (such as the hundreds of thousands of Jews in Argentina) so that the entire Western Hemisphere is a mix or a blend.

>>Screw Democracy. We need a government that will cater to, defend, and
>>ensure the future of the White Race and Western civilization.

Then go to Sweden or Iceland or somewhere else.

I use the notch filter quite often, but unless things have changed, it
was an option on the radio. By the time you outfit a 7030 with all the
goodies, it costs much more than the Drake R8B did. I never found the
noise blanker to be all that useful on the 7030, but it might just be
me.

I bought the AOR7030+ plus with options and it cost more than the Drake
R8B.

New Zealand updated their schedule and added DRM broadcasting.

This would be a good test of DRM. Maybe some one can compare the DRM and analog broadcasts and let us know if the DRM is a real improvement or not.

04 Jun 2006 - 02 Sep 2006

UTC kHz band Target Azimuth Days
4:59 6:58 9615 AM 9440 DRM 31 All Pacific 0ï¿½ Daily

Source record: 77287

DX Ace,

You are referring to : Statistical Policy Directive No. 15,
Race and Ethnic Standards for Federal Statistics and
Administrative Reporting.

- - - Hispanic or Latino. A person of Cuban, Mexican,
Puerto Rican, Cuban, South or Central American, or
other Spanish culture or origin, regardless of race.
The term, "Spanish origin," can be used in addition
to "Hispanic or Latino."

HISPANIC - It All Comes Down To - Who You Are [.]
Hispanic -expanded to- Latino and Chicano Hispano
Peoples of the Culture and Heritage resulting from
the Spanish Diaspora in the Americas.

Who Is Hispanic ?
http://www.isteve.com/who_is.htm
Who is Hispanic ? - The official but vague
Equal Employment Opportunity Commission (EEOC)
definition is: "All persons of Mexican, Puerto Rican,
Cuban, Central or South American, or other Spanish
culture or origin, regardless of race."
http://www.fsu.edu/~elcentro/DidUknow.html
http://www.hispanic-research.com/home/faq.htm

OTHER DEFINITIONS - LEGALLY VALID
A competing definition is "someone who grew up in a Spanish speaking
household or was born in a Spanish-speaking country." This favors
recent immigrants over longer-resident, English-speaking Hispanic
families. It also discourages families from teaching their kids
English. Further, it would exclude plenty of obvious candidates. For
example, the late musical prodigy Ritchie Valens (Ricardo Valenzuela),
a hero to Mexican-Americans, was raised speaking only English (he
learned the Spanish lyrics to "La Bamba" phonetically). Finally, it
includes Spaniards and Teutonic Paraguayans named Klaus who don't like
to talk about what their fathers were doing 1933-1945.

THE ULTIMATE LOOPHOLE - "SELF-IDENTIFICATION"
The Ultimate Loophole. According to the EEOC, you can belong to any
protected minority with which you "identify." {Self-Identification}
Since most people identify with their self-interests, anybody can
plausibly claim to sincerely identify with anything.
Note - Often any and all of the following elements
can cause and and Individual to "Self-Identify" with

being a Hispanic :
* Name
* Language
* Culture and Religion {Up Bringing}
* Heritage {Family, Ancestors and Appearance}

DOD - Department of Defense Directive 1350.2 defines Hispanic as "A person having origins in any of the original peoples of Mexico, Puerto Rico, Cuba, Central or South America, or of other Spanish cultures, regardless of race." (9A) In the 2000 Census, it was left up to the individual to identify if they were Spanish/Hispanic/Latino. If the answer was yes, then the individual had to decide if they were Mexican, Puerto Rican, Cuban, or Other. If the Other category was chosen, the individual could write-in a response. There are two central themes in determining who is Hispanic; a common language and lineage that can be traced back to Spain or Latin America.

DE,

The claim is that the High Cost of Fuel is currently due
to the Growing Economies of China and India and their
demand for Energy (oil) to Fuel their Expanding GDP.

So - When you buy something Made in China or India
the Money goes around the World and Buys another
Barrel of Oil on the World Market that drives-up the
Price of Fuel Around the World.

and the money keeps going round and round ~ RHF

Telamon,

Current 'local' Listeners can still use their good old
Analog AM and FM Radios to "Hear" their 'local'
Radio Stations - For 99% of the Local Listeners
Nothing Changes [.]
- - - And with Time Everything Changes.

The DXer Is Not By Definition A "Customer" Within
The Local Listening Market -and- Only Listeners
within the Local Listening Market are Customers.

OBTW - If IBOC like AM-Stereo fails. - For 99%
of the Local Listeners Nothing Changes [.]

have a radio day ~ RHF

Long Ago and Far Away !

The Celtiberians (or Celt-Iberians)
http://en.wikipedia.org/wiki/Celtiberians

The term "Black Irish" is sometimes used in Canada and
the United States to refer to Irish people possessing dark
skin and hair, purportedly due to ancestry from Iberian Celts.
http://en.wikipedia.org/wiki/Afro-Irish

Melungeon is a term traditionally applied to one of a number of
so-called "Tri-Racial-Isolate" groups of the Eastern United States

Here's fourteen shillings on the drum
For those who'll volunteer to come
To list and fight the foe today
Over The Hills and Far Away

Interesting comments, however I really couldn't care as
most of the programming on AM radio here is either:

1) Reactionary "Talk Radio" with all it's forms of political bullshi+
2) Spanish speaking stations what play that marichi-band or similar
annoying music 24/7 and use reverb/echo boxes for speech.
3) Religious stations what have programming ranging from the 2nd
AME Church of the Obese Singing Welfare Queens to Brother
Stair who comes on at 2 AM with his unique brand of bile.

They can have their HD Radio. It's all the same bullcrap that's now
sent to you via "Digital Hi-Fidelity" which is an 1st order oximoron.

The only POSSIBLE BRIGHT SPOT on the AM radio dial is here:
http://beradio.com/fcc/radio_fcc_considers_lowpower/

517. FCC (re-) considers low-power AM Broadcasting

Newsgroup: rec.radio.shortwave

FCC considers low-power AM
By Harry Martin - Jan 1, 2006 12:00 PM

The FCC is considering the establishment of a new low
power AM service. The agency received a petition
for rulemaking asking that it authorize such a service
and the Commission was interested enough in the proposal
to issue a notice asking for public comments. Here are some of the details:

Unlike LPFM, the LPAM proponents want the new service to be commercial.
Existing broadcasters would be ineligible to apply.
Local residence, at least initially, would be required.
Power levels of up to 100W, 24 hours per day are proposed.
Interference calculations would be made under existing AM
allocation rules, but with a 100W application treated as one for 1kW.

The prospects of the Commission actually approving LPAM
appear to be poor, but that is what many observers said
about LPFM when it was first proposed in the late 1990s.

Despite considerable opposition to the concept, the FCC
created the LPFM service in January 2000. LPFM is subject
to many limitations besides those on power. LPFM stations
must operate non-commercially. They must be owned by
an organization with ties to the community. Any organization
can own, at most, only one LPFM station. LPFM stations
cannot be sold.

Perhaps recognizing these realities, some of the promoters
of LPFM have now returned to the Commission with
LPAM ï¿½ a service that would not be shackled with the
restrictions that apply to LPFM.

Supporters say that low power commercial AM stations
would create a middle ground between mom-and-pop local
stations and the super-sized, rigorously formatted group
owned outlets. Cheap commercials from businesses otherwise
priced out of advertising on regular stations would support
the service. LPAM supporters say the service would reinvigorate
locally focused programming and encourage innovation.

The proposal would permit ownership nationwide of
as many as 12 LPFM stations by one individual or entity
nationwide, but owners would be permitted only one
such station per market. Unlike, LPFM, LPAM stations
could be bought and sold.

A difficult task

LPAM proponents are likely to have a long and difficult struggle. Existing full-service AM operators, who already face serious congestion in the AM band, will insist that the technical specifications for any LPAM service be carefully devised and closely enforced to ensure protection of their signals. (The LPAM proposal is notably short on technical details.) And most local broadcasters are expected to take exception to the notion that some local advertisers are being priced out of the radio market. While the LPAM proponents claim that that is the case, they offer no empirical evidence of a commercial niche for the new stations.

Another obstacle is that the LPAM proponents request that the new service somehow be made exempt to auction processing. The proponents want selections among mutually exclusive applicants through a point system similar to that used for NCE-FM and LPFM. But this scheme would require an amendment to the Communications Act, which now provides that all commercial spectra must be awarded through auctions.

Still, the LPAM idea has been placed on the table which means the FCC is interested enough in the proposal to consider it further. The same type of initiatives ultimately resulted in the creation of the LPFM service. It could happen again.

The US is not / has not a "Spanish cullture" although one thrives inside the
dominat culture.

The proper definition (the one you use is mostly for government procurement)
is that of the US census. In any case, both specify origin or culture, and
would indicate that a person of Hispanic culture is Hispanic. Seems clear to
everyone but you.
>
> That is the definition used officially in the US.

No, it is the one used mostly for procurement. It is somewhat different from
the one of the OMB and the US census (/which are, in fact, the same).

Radio formats are not, per se, reactionary. They are determined on the basis of what will get the most listeners. For example, in Los Angeles, there are about 6 shares of listening for conservative talk and less than a half-share for liberal, left of center talk.

> 2) Spanish speaking stations what play that marichi-band or similar
> annoying music 24/7 and use reverb/echo boxes for speech.

Mariachi music is a tiny part of the so-called regional Mexican format. A mariachi is a mariachi. The name means a type of band. So "mariachi band" is redundant.

And the reason why you have Spanish language formats on AM is that the local AMs can not make money any other way.

> 3) Religious stations what have programming ranging from the 2nd
> AME Church of the Obese Singing Welfare Queens to Brother
> Stair who comes on at 2 AM with his unique brand of bile.

Well, strike two for you. You called Mexican music annoying, and now you are making fun of religious programming. while you may not like any of this, others do. Who are you to impose your taste on anyone else. The reason why there are many stations is so that there are choices.I'll bet I do not like your favorite music styles, but I do not begrudge you the right to have some station serve your tastes.

> They can have their HD Radio. It's all the same bullcrap that's now

And I would bet you hav enot listened to an HD station, AM or FM. They sound considerably better than analog, in fact.

You are very good at "Ready, Fire, Aim"

Oh David,

Yes, it makes sense - the digital portion is included in the sidebands. The problem is that more energy is put into the sidebands, thus possibly cauing interference with neighboring stations. The digital portion does not carry, as far as the main analog lobe. Don't you know what a signal looks like:

http://en.wikipedia.org/wiki/In-band_on-channel

David, if whites should go to Sweden or Iceland then latinos should go back to their latino countries. The United States does have a mixture of cultures and races, however they are among the minority. We have one dominant culture and language and it isn't anything latino such as the Spanish language. We wish to retain the dominant culture and language in this country just like Mexico wants to retain theirs. So, no, we aren't going anywhere as our ancestors were born here and built this country. We are getting tired of latinos getting special treatment in this country and taking over and many of them are here by illegality anyway and those who are not, stick up for them rather than their fellow American citizens. Whites no longer have any representation in their own country. Put the shoe on the other foot for once, David.

When you are ready to engage in a sensible point-by-point refutation of what I said (which DXAce failed to do, as he so often fails to do), we can have an intelligent discussion. If you're not in the mood, so be it. I am convinced that DXAce doesn't give a whit about his country, and that what happens after he's dead is of no concern to him.

HD, as applied to radio, does not mean High Definition. HD is ibiquity's meaningless marketing term.

Here are three places you won't see much of the term "High Definition".

http://ibiquity.com/

http://www.hdradio.com/index.php

http://www.hdradioalliance.com/index.php

Look who's talking. You, DXAce and several others here have proven conclusively that you're so extremely right you make Barry Goldwater look like Karl Marx. I have opined, on several occasions (and a Google search will bear this out) that Bush has occasionally, if temporarily, done things that seem to make sense. I have stated several personal opinions that, taken on their own out of context, would seem to make me sound like a conservative (In fact, I am just a little left of center when everything is factored in, mostly because of my environmental concerns), and I have been willing to moderate my stances on several issues when new information came to light. Tell me a single occasion when you or the other stubborn right-wing extremists on this group have been willing to entertain the possibility that their Chosen One might have made a mistake here and there, or that somebody else might have another solution to a problem that is worth considering. If you have done this, it has been utterly invisible...and I am certain it is not because Bush is perfect, despite his direct connection to God.

If you can educate me, enlighten me, help me rest assured that a 9 trillion dollar and growing national debt is a good thing and can be easily handled, I am all ears. If you can show me how this will not be a drag on our economy for the next 100 or more years, I would love to hear it. If you can point out to me how the resurgence of the Taliban and its support for Al Qaeda is a sign that Terrorism is being licked, I'd be purple with apology. If you can show me how Homeland Security is adequately doing its job when people with bomb parts can walk uninterrupted onto a plane while elderly ladies are being frisked, and FEMA is doing its job when planning for fairly routine occurrences like hurricanes hadn't really crossed anybody's mind, I will bow to those who are infinitely more informed than I am. If somebody can explain to me how skyrocketing healthcare costs, sluggish research and the invitation of millions of poor people from other nations is going to make overall public health a slam dunk, I'll give you game.

Notice I have left environment out of this set of variables. That is one area where, yes, I believe firmly that Bush and current Republican crop is among the worst ever.

These are not partisan issues, neither Democrat nor Republican, Conservative nor Liberal. These are matters that affect the day-to-day

and year-to- year safety, security, economy and stability of our country. These are matters that all conscious Americans care about. Can you help me understand, given Bush's track record and the current state of things, why I should not be concerned with this particular president at the helm? What big ticket items, in fact, has he gotten right?

One question here is how do you know the Drake is using quadrature
techniques to kill the other sideband. You may be selecting a sideband,
but again, how do you know how it is selected. I've designed Hilbert
transformers for narrow data applications. Getting a good Hilbert
transformer for voice grade isn't as easy. The sideband cancelation
will only be as good as the Hilbert transformer allows.

The president can bring the price down in any number of ways. Of course, the desire to reduce the price of oil would be required.

There are facts and there are facts. Neither you nor the liberals nor the conservatives have a lock on the truth, and there's plenty of evidence (which you conveniently discount) that raises doubts.

So unless you have something substantive to say, back to your pacifiers, Fluffy.

Hey, that's where many of rrs's political posters get their talking points!

> 2) Spanish speaking stations what play that marichi-band or similar
> annoying music 24/7 and use reverb/echo boxes for speech.

We have some very good music on our Spanish speaking stations. The
Caribbean big band music is often excellent. I love the musical remakes of
US fifties rock such as Spanish Rockabilly. I heard a Spanish version of
the old song "Silhoutte" which was delightful.

> 3) Religious stations what have programming ranging from the 2nd

OK, SW radio tops AM for religious entertainment.

Even if low power AM happens, the new owners will still have to do
something -- something cheap -- for programming.

III. Explanation #Three - Inaccurate Election Results

If the discrepancies between exit poll and election results cannot be
explained by random sampling
error; the ''Reluctant Bush Responder'' hypothesis is inconsistent
with the data; and other exit polling
errors are insufficient to explain the large exit polling
discrepancies, then the only remaining
explanation ''that the official vote count was corrupted'' must be
seriously considered.

Libbys?

What the fuck are you trying to say? That anyone who disagrees with
the mass insanity in Washington is in some kind of Socialist cult
called the ''Libbys''?

I got news for you, Dick. Barry Goldwater would kick George Bush's
faggot ass from DC back to his fake ranch in Waco if he heard him
call himself a Conservative. Bush is a Neosocialist. Look it up.

You listen to hop-heads like Linbaugh and Hannity and just swallow
that spew without coming up for air. You are brainwashed.

Pretty hard to comprehend a fluff-speaking addlepated Republican. Your hero suffers the same disability. Talk about hitting the mushrooms - if Bush has a neuron left after the chemicals he's stuffed into his worthless carcass, it's because Cheney, Jeb and Dad donated the few they could spare.

When they say 'racist' like this, it means MULTICULTURALIST. When they are a multiculturalist, what they are saying is, 'They don't care about Asians. They don't care about blacks. They do care that Europeans be exterminated as an identity because 'they don't see any need for races to continue', unless of course, you are a member of their FAVORITE race, Jews, who they absolutely at any cost, defend being a race and a people.

'racist' = you hate white people.

Don't bother lying about it.

People who say 'racist' always lie about it.

You have already came back and already insulted me in an ad hominem, and already lied about it. It is covered. So don't bother. But that is still your politics.

Funny how you 'anti-racists' ATTACK ANYONE who wants the same rights you demand for Jews. Why can't I be EQUAL to a Jew and get those same rights? Because you are a racist asshole, and think people are fooled by your horseshit

I'm not aware of it being allowed, but then, I'm also not aware of any
FCC rule saying an amateur cannot encrypt a message.

There are a number of digital modes, both voice and data, and you may
have just run across one of those.

Sort of - my brother-in-law, a union-man and absolute-Democrat as a result, analogously to many Republican toadies, has his head in the sand on practically everything besides his precious union issues. He's a smart guy who chooses to be uninformed, even when the information benefits his side.

You may be interested to know that, very much unlike the whitewash "liberal" picture you would paint of me, I do not automatically subscribe to the Union Do-or-Die attitude. That is probably part of why we had a squabble. The upshot is that I see around me a good number of people who should know better than to act like ostriches, who should be looking around at the information available so as to make an informed decision, but do not, and it troubles me that the future of the U.S. is in the hands of such myopic people.

Somebody said that it has an IF output, not an integrated DRM decoder. I don't know if it is a 12 kHz IF center freq that can be fed into a computer sound card or a higher IF that would require a downconverter. In any case, this is hardly mickey mouse (altho' some say SSB speech sounds m-m) because it makes it very convenient to use IF and demodulator DSP. While you can use such for DRM decoding, you also can use software DSP for AM/SSB/CW/NBFM/digital modes with superlative filtering, noise reduction, spectral display, etc. Very advanced stuff. If the KK-DRM01 has very low phase noise, it could be a really low-cost, effective tuner/front end for a software defined radio using free software such as SDR and Dream; look out Ten-Tec RX-320D! The Kchibo would have the advantage that it can be unplugged from the computer and used on its own.

How about "High Density"? Seems to describe the way digital radio sounds on
a conventional AM detector and the way complainants characterise the
interference. Some might also say it characterises the way a digital
receiver sounds - certainly not CD quality.

Because the food item was not Mexican but American. And that invalidates
your contention, as humorous as it may be.

> Just shows that he's more of a trivial nuisance than any source of great
> knowledge, shame too, he has a lot of experience in broadcasting.

You should know the difference between US adaptations of Mexican ingredients
(burritos, chili con carne, etc.) and real Mexican food. Any effort to
identify with Mexico without knowing that is, let's say, a fatal flaw.

>>
>Exit polls are worthless.
>
Exit polls are highly accurate. They remove most of the sources of
potential polling error by identifying actual voters and asking them
immediately afterward who they had voted for.

The reliability of exit polls is so generally accepted that the Bush
administration helped pay for them during recent elections in Georgia,
Belarus and Ukraine. Testifying before the House Committee on
International Relations Dec. 7, John Tefft, deputy assistant secretary
of state for European and Eurasian affairs, explained that the Bush
administration funded exit polls because they were one of the ï¿½ways
that would help to expose large-scale fraud.ï¿½ Tefft pointed to the
discrepancy between exit polls and the official vote count to argue
that the Nov. 22 Ukraine election was stolen.

Grasping at explanations
Last November in the United States, as in Ukraine, the discrepancy
between the presidential exit polls and the tallied count was far
beyond the margin for error. At the time, Edison Media Research and
Mitofsky International, the two companies hired to do the polling for
the National Election Pool (a consortium of the nationï¿½s five major
broadcasters and the Associated Press), didnï¿½t provide an explanation
for how this happened. They promised, however, that a full explanation
would be forthcoming.

On Jan. 19, on the eve of the inauguration, Edison and Mitofsky
released their report, ï¿½Evaluation of Edison/Mitofsky Election System
2004,ï¿½ which generated headlines such as MSNBCï¿½s ï¿½Exit Polls Prove

That Bush Won.ï¿½ But, the report does nothing of the sort. It restates a thesis that the pollsters previously intimatedï¿½that the discrepancy was ï¿½most likely due to Kerry voters participating in the exit polls at a higher rate than Bush voters.ï¿½ But the body of the report offers no data to substantiate this position. In fact, data presented in the report serve to rebut the thesis, and bolster suspicions that the official vote count was way, way off.

The report states that the difference between exit polls and official tallies was far too great to be explained by chance (ï¿½sampling errorï¿½), and that a systematic bias is implicated.

With that statement the pollsters confirm the discrepancy we initially documented. The exit polls were based on more than 70,000 confidential questionnaires completed by randomly selected voters as they exited the polling place. The overall margin of error should have been under 1 percent. But the official result deviated from the poll projections by more than 5 percentï¿½a statistical impossibility.

not so rondomly most likely

but again if we accept your thesis why bother to hold elections just
apoint Gallup to decide the race save a LOT of money that way

BTW I have never seen a poll advertised as having a marigin of error of
less than about 4 percent

The fact is your boy Gore lost and your boy Kerry lost.

The fact that you've chosen to portray those losses as 'stolen' elections says a lot not only about your mental state, but the state of your Party as well.

The fact is, your boys just couldn't cut it in the marketplace of ideas which translates into votes.

Looking forward to the 2008 campaign,

dxAce
Michigan

What is extra funny,,,

Coming from a Jew, who is NOT EVEN GENETICALLY RELATED TO REAL JEWS.

Real Biblical Jews were Arabs.

So some Pollok with dick on his breath who CONVERTED TO A JEW,
is going to protect his ancestry he does not even have.

No more relation to Abraham than you have to Yamamoto or Shaka Zulu.

I am a member of my ancestors people.

I did not have to CONVERT TO ANYTHING.

Go back to Poland Pollok, and take the rest of the Israeli COLONISTS
with you.

To Bob & Friend:

I am familiar with the digital modes and have monitored them extensively
using MultiPSK. This was clearly an encrypted voice transmission as I have
monitored them on military HF.

There were two distinct 'voices' going back and forth with a long period of
silence in between.

so you want to bse the elcetion result on exit polls rather than the
real thing

>
> That morality junk scored very low on peoples' priorities. More
> radical right BS and smoke.
but not on the voters of seerl counties where the rpublican focused and
of of course being exit polled on the basis of past years turn out were
under represented doesnot much to skew the results obviously

but Kerry and Gore helped to sertiy those elections Gore taking a
bigger role in his defeat than Kerry but Senator John Kerry took part
in asserting the elction as valid on the floor of the senate of the US

Hams are authorized to send digital data such as RTTY, PSK31 and others
Is this what you heard??

Also by gentle persons agreement and tradition - Hams operate Upper Side
Band on the 20M phone band, BUT they are allowed to operate Lower Sideband
as well -- few do. You may have heard a LSB signal

USA Amateur Extra class hams can operate phone from 14.150-14.350 MHz:
So I suspect you heard a LSB signal -- just switch to LSB when you can't
"unscramble" a signal.

RE Encrypted messages -- see
http://www.arrl.org/FandES/field/regulations/news/part97/
FCC Part 97.113 Prohibited transmissions.
(4) Music using a phone emission except as specifically provided elsewhere
in this section; communications intended to facilitate a criminal act;

messages encoded for the purpose of obscuring their meaning,

except as otherwise provided herein; obscene or indecent words or language;
or false or deceptive messages, signals or identification;

--
CL -- I doubt, therefore I might be !

The Mexica Movement has very many of the same goals, and the
organizations appear to be becoming very highly entertwined.

http://www.mexica-movement.org/

<quote in-part>

WAKE UP MEXICA!

The photo below is from the Orange County Weekly of April 13, 2006. This
photo is for those of our people who still don't get it. We have to get
organized now before they start the concentration camps which are being
built by Cheney's company Halliburton. WAKE UP PEOPLE OF ANAHUAC!
Remember, the Jewish people said that the Germans were "too civilized"
to do anything barbaric (you hopefully know how wrong they were). The
racists amongst the Europeans here on this continent already killed 95%
of our people in the last 500 years and they have no guilt or shame for

any of the holocaust that they committed against us (look it up on any of the white supremacist websites). Racist extermination of our people and theft of our continent has given them a lot of free land and made them the richest thieves in the history of the human race.

Europeans (all Europeans) who are not racist, this is also your wake up call. Good people like yourselves did nothing while our people were killed in the millions (70 to 100 million) in the last 500 years of European colonialism. It's starting all over againï¿½because we are "too many", as they said from the point that Columbus arrived uninvited in 1492. Where is all the European morality, truth, justice, and ....Christian behavior.... or Judeo-Christian ethics??? Join the good Europeans in this struggle!

</quote>

And from elsewhere on the same site,

<quote>

Itï¿½s time for liberation

Itï¿½s time for education

Time for Liberation
from 1492
Time for education
on the last 500 years...

Time for truth
The truth about Columbus
Truth of the crimes of the Europeans
500 years of crimes
of the Europeans
The truth of our ownership
of this continent
The truth of the holocaust
that happened
to us here
The truth that we are ignorant of

We are colonized
under the European false ownership
of our land, our continent.
We are colonized
under the false labels
of Hispanic and Latino
that make us foreigners
on our own land, our continent.

We are an occupied nation
WE ARE AN OCCUPIED CONTINENT
We are a people enslaved to Europeans.

We need to learn
about colonialism and genocide.
Two important words.

We need EDUCATION
ON HOW
TO GET UP OFF
OUR KNEES
How to be free
from the racism of the Europeans.
We need to learn how to be free from Europeans.

We need to think these thoughts.
Here we promote those thoughts:
Liberation;
we are not Hispanic and not Latino;
end the occupation of our continent;

end of the theft of the wealth
of our continent.

Think on the thoughts on this page

and you will free yourself

from the slavery of ignorance

in which we are all in, then

go out to free our people

with the knowledge you will gain

from these pages.

We need EDUCATION
ON COURAGE AND HONOR.
EDUCATION
THAT GANGS ARE not THE ANSWER
Education on the true history of our people.
EDUCATION
THAT THE WHITE MAN IS NOT
THE ANSWER to anything in our lives.

EDUCATION ON LIBERATION
EDUCATION ON OUR ANAHUAC NATION

Thatï¿½s the answer!
Thatï¿½s the answer!
Thatï¿½s the answer!

Education
on the beauty of our people.
Education on colonialism and genocide
and why we must be free
from Europeans.

Free from Europeans.
Our continent,
free from Europeans.
Our people free from Europeans.

The genius of our people
it's being wasted every day.
You should cry one day
when you wake
and know what that means.
They have us living
as slaves in ignorance.

Listen my people
we are all one people
on this continent.
Forget the borders.
Forget English and Spanish languages.
Forget ï¿½Americaï¿½.
We are the Indigenous people of this continent.

We speak to you as the Mexica Movement
in the spirit of our last great civilization,
the Mexica, the so-called, miscalled, Aztecs.
We are Mexica Movement.
The Mexica are our guides
to the liberation of our people.
The name of our nation is Anahuac.
We are the Anahuac nation.
Anahuac is this whole continent.
We are the
people of Anahuac.

Listen
Mexicans, Chicanos, ï¿½Centro Americanosï¿½,
Native Americans
We are all one people
Not European
Not of the Spanish
Not Hispanic
Not Latino
Not of the Latins
Not of the Whites
Not Raza
Not Mestizo
Rape does not define us
Thatï¿½s what Raza and Mestizo do
They celebrate our rape
They take pride in our slavery

We are not the natural slaves of the white man
We are meant to be free

Not slaves of anyone

Nican Tlaca means Indigenous.
Indigenous means
that we are the original inhabitants
of this continent.
Listen Nican Tlaca,
all Indigenous
people of this
our continent.
Listen, we are Nican Tlaca:
the only owners
of this continent.
Forget North America,
USA, Canada, Mexico,
and "Central America"
---this whole continent is Anahuac.
This is our continent.
100% Nican Tlaca.
100% Indigenous.
100% Anahuac.

Listen my people
we were
once a great nation.
The nation of Anahuac.
A nation without Europeans
on our continent.

We were
once a great civilization
of large cities, large towns,
a great civilization.

We were once the greatest astronomers,
the greatest mathematicians,
a people
dedicated to science and logic,
law and justice;
dedicated to Our Creator,
our people, and our land.

We were once architects, engineers,
doctors,
men and women
of books, of cities
---a people
devoted
in all our senses
to Our Creator.

We were thinkers, doers,
men and women
of knowledge, of wisdom,
a people of detailed science,
of deep understandings,
a people of tremendous industry,
vast commerce,
men and women of great intellect.
We were teachers, writers, artists,
mysticsï¿½people of honor,
people of pride,
people of dignity,
a people
of great accomplishments.

We were a people who were
morally and ethically
superior to any European
(see the list of their crimes against us
ï¿½what crimes did we commit against them?).

We were a people
who daily dedicated
our lives
to scientifically understanding
and explaining
the beauty of Creation
the beauty of Our Creator.

That is who we once were.
That is who we can be,
again.

This knowledge is meant to help our people
reconstruct our nation, our culture,
our Nican Tlaca unity, our Anahuac unity,
our Mexica heritage.

This is more than just words.
This is meant to be a blueprint
for the road, the way, the guidance
to make us a liberated people,
once again.

Nican Tlaca
means Indigenous.
Anahuac
is this continent.
Mexica
was our last great civilization.
Mexica
is the heart and essence
of the reconstruction

and liberation
of our people.
Nican Tlaca.
Mexica.
Anahuac.
Our people, our heritage, our nation.
Nican Tlaca.
Mexica.
Anahuac.

Yes, the beauty of our people
The genius of our people
is being wasted every day
Letï¿½s wake our people
Letï¿½s shake our people
With knowledge and courage
Discipline and honor!

Our Anahuac continent!
Our peopleï¿½s liberation!
Let them be
the order of the day
the order of justice
the order of our destiny

Today
we live under occupation.
European occupation
on our continent
in the USA
in Mexico
in "Central America"
in whatï¿½s called Canada
This whole continent
is controlled by whites:
Mexico, controlled by Europeans;
"Central America", controlled by Europeans.
The white faces on Spanish language TV
The whites who control Mexico
and "Central America".

Our people controlled by white Cubanos
in the USA.

We are under European occupation USA
All of our continent
All of what they call
North America
is our continent
This is our homeland.
This is our continent.
This is all our land.

This is all our continent.

Today we are occupied
as a nation, as a people, as a continent

Today weï¿½re poor
Weï¿½re ignorant
We kill each other
in gangs, in drugs,
We kill each other
for money, weï¿½re fools
We kill each other
We kill each other
for no good reason.

We fear the white man
Thatï¿½s why
we kill each other
We fear the white man
Thatï¿½s why
we kill each other
We fear the white man
We fear the white man!
We fear the white man!

Yes, the beauty of my people
The genius of my people
is being wasted every day
Letï¿½s wake our people
We live in ignorance
Letï¿½s shake our people
They steal our lives
They steal our land

They steal the wealth of our continent
Letï¿½s wake our people
Letï¿½s shake our people
With knowledge and courage
Discipline and honor!

They say weï¿½re foreigners
They say weï¿½re a waste of life
Europeans, the great white race (hah!)
They see us as slaves
They need us ignorant
They need us
slaves in the fields
corporate slaves
janitors and cooks
token corporate capitalists
soldier slaves
gangster slaves

slaves in every way
They need us cowardly
They need us afraid
They got our land
They got our wealth
They got us ignorant
---of all our glory,
of all our history
They got us in dishonor!

They rob us every day
They rape us
with assimilation.
Assimilation is the slow motion kill.
Assimilation means marrying white
to kill the brown in us, to kill the heart of us.
Assimilation means the end of us.
Assimilation sucks us down into the white race.
Assimilation kills our race.
Assimilation is the death of us.
Assimilation is racism.

Assimilation is Genocide.

Theyï¿½ve killed us of our heritage
Theyï¿½ve killed us of our dignity
They have castrated us
culturally, mentally.
We behave as if we are the living dead
We might as well be dead

because we are slaves of the white man
The white manï¿½s punk
The white manï¿½s ignorant punk

But that can change
That must change
That will change

We are the Mexica Movement
saying itï¿½s time
to think for our interests,
not the interests or the feelings of the Europeans
or their descendants on our continent.
Itï¿½s time for liberation
Itï¿½s time for education

We are the Mexica Movement
the one and only organization
for the total liberation of all of Anahuac.

Time for Liberation
from 1492

Time for education
on the last 500 years
Time for liberation
from all the Europeans
Time for truth
The truth of Columbus:
thief, murderous savage monster.
Truth of the crimes of the Europeans
genocidal users of biological weapons.

They killed 95% of us
with biological weapons.
Smallpox was their favorite weapon.
Weapons of mass destruction of our people.
They also enjoyed
doing torture, mutilation, rape, massacres.
These were
their dirty criminal pleasures,
sanctioned by European church and state.
500 years of crimes of the Europeans.
This we did not know!
This we need to know!
Europeans need to know!
The whole world needs to know!

The crimes of the Europeans!

The true savage nature of Europeans.

We must learn the truth
The truth of our ownership
of this continent
The truth of the holocaust
that happened here to us:
23 million of us killed
in Mexico and ï¿½Central Americaï¿½
10 million more of us killed
in Canada and the ï¿½U.S.ï¿½
95% of us were killed.
Genocide.
Our Holocaust.
The truth is
we are ignorant
of all these crimes
committed against us
by Europeans.

We must learn the truth.
The complete truth.
This truth needs to be
in our breath, our heart, our blood, our bones, our minds, our culture.
The non-Eurocentric truth:

we are an occupied nation;
we are an occupied continent;
we are a people enslaved;
we are an occupied continent;

we are slaves of the parasitic genocidal Europeans.

We need EDUCATION
ON HOW
TO GET UP OFF
OUR KNEES

out of slavery, out of disgrace, out of dishonor, out of this
European-made hell.

Zapata said: Land and liberty
That means:
our continent, our liberation.
We need to learn
how to be free;
how to be free from Europeans.

We can think those thoughts,
plan our liberation:

orderly;

educationally;
disciplined;
confrontationally;

courageously;

using the intelligence, genius and collective idealism of our ancestors.

We of the Mexica Movement
think and live the actions of liberation.
We will not be cowards.
We all have to think
thoughts of liberation now.
Thoughts to bring about
the end of European occupation, oppression,
and enslavement of our people.

Here we promote those thoughts:
complete liberation;
complete with reparations and end of occupation.
We will be free.
Free from Europeans.
End of occupation.
The end of European occupation
means our people will be free.

The beauty of our people
The genius of our people
is being wasted every day.
Every day we are enslaved.
Canï¿½t you see that?
Wonï¿½t you see that?

Letï¿½s wake our people
Letï¿½s shake our people
With knowledge and courage
Discipline and honor!
Our continent!
Our liberation!:
the order of the day
the order of justice
the order of our destiny

Here on this continent

we are descendants
of honorable people,
of great civilizations.

We created cities,
sciences, great achievements
while Europeans
were still savages in Europe.

We created agriculture and medicine,
astronomy and mathematics,
a calendar,
great architecture and art
here on this continent
If you donï¿½t believe it,
look it up in the latest history books,
in encyclopedias,
in art books, archeology books.
Look it up if you donï¿½t believe it.
But it is the truth!

Learn the truth
Erase the lies
Learn our pride
Learn the courage
Erase self-hate
Learn to say no
No to the whiteman
No to the thief
No to the occupier
No to the enslaver
No to the ignorance
No to our cowardice
No to our selfishness

No to wanting to be white
No to killing our own people through gangs
No to assimilation
No and no and no.

We say no to simulating white people
in a love for money
in greed and crime
in gangs that kill us
in lies that kill us
in behaving like white people,

dying hair, bleaching skin, blue-eyed contacts, dreaming of being white.

We say no to being happy slaves, suicidal slaves.

Liberation means to be free from Europeans.

But you need to know who you are, and why you need to be

free from Europeans.

Liberation is not about parties or having a priority of sex

and still pretending to be "revolutionary".

Life is not just about parties and sex.
For liberated people
life is about knowledge and courage,
honor and dignity,
discipline and participation
in the liberation of our people.

Donï¿½t listen to that white person in you
telling you to ignore your people
and to just have fun with sports TV
and getting high, drunk, having sex.

Don't be the beast of the European.
When you behave cowardly, passive, meek, quiet,
what you are really saying is:
Forget My People,
itï¿½s all about me and my pleasures.
Thatï¿½s being cowardly, shameless, selfish, and suicidal---you are your
people.
We are our people, our ancestors, our descendants.
When we are selfish we betray ourselves.
We deny our people their honor.
Thatï¿½s being a traitor.
Especially when you know
the facts of our enslavement.

Life is not about getting high
and stealing what you can get away with.

Life is not about being born into slavery
and dying in slavery.
Life is about
collective accomplishments.
True accomplishments can only happen

within a liberated nation.

Mexica Movement speaks:
We will not be the white manï¿½s punk!
by being too selfish to liberate our people.
We will not be the white manï¿½s punk!
This is the end of that foolï¿½s game.

Itï¿½s time for liberation.
Itï¿½s time for education.
Itï¿½s time for a disciplined liberation

through the Mexica Movement.

Time for Liberation
from 1492
Time for education
on the last 500 years
Time for truth
The truth of Columbus
Truth of the crimes of the Europeans
500 years of crimes of the Europeans
The truth of our ownership
of this continent
The truth of the holocaust
that happened here to us
The truth that we are ignorant of

Do you understand?
We are a colonized people.
We are officially slaves of Europeans.
Theyï¿½ve stolen our continent.
That means theyï¿½ve stolen our wealth.
Whereï¿½s your anger and your
confrontation of this occupation
and ongoing colonization?
We are the 5% that have survived
a holocaust that killed 95% of our people,
23 million of our people were killed
in Mexico and "Central America",
another 10 million of us were killed
in what is called Canada and the USA.

But we care more about 6 million Jews.
We care more about the sufferings
of other people in the world,

not knowing that we are worse off
than the Palestinians
who at least have some hope of liberation.

We are victims of the largest genocide-holocaust

in the history of the world.

Examine our history!
Full of accomplishments, before the Europeans!
Examine our beauty, our genius.
Olmecs in Mexico and "Central America"
Olmec influence

all the way to the Anasazi in the "Southwest USA"
Cahokia in the "Midwest USA"
The Adena, the Hopewell,
Moundbuilders on the Mississippi,
in the "Southeast USA "
and the Iroquois nation
all the tribes of Canada, the "Western US"
all the ancient cities
of Mexico and "Central America"
This whole continent is ours.
We are one people.
Liberate that thought
into your mind.

Mexicans, "Central Americans",

"Native Americans",

and "First Nation People" of Canada

are all one people.

We have a beautiful heritage.
Cities, art, architecture
sciences, astronomy,
the worldï¿½s best calendar.
Olmecs Maya Mexica.
Civilization going back
5,000 years from Olmecs to Mexica
Maya to Toltec.
Olmec civilization and culture spreading
to all of this continent.
Civilization!
Accomplishment!
We are the children of Anahuac civilization!
We are the children of corn civilization!
We are the children of Our Creator!

We are descendants of a great people
We were a great people
until they came:
Europeans robbed and raped, enslaved,
culturally castrated,
dignity denied us.

But our people do not understand
racism and rape
thieves and liars
and that connection to our poverty,
our ignorance,
and our self-hate.
They do not understand

that there are monstrous crimes

that were committed by Europeans against us

and that those crimes are still going on.

Our people now have no hope,

no significant knowledge.
We have no leaders, courage, or vision

We do not understand colonization.
We do not understand Genocide.

But we have to understand
We have to understand
that this is our continent,
that participation in liberation is not a choice,
it is an obligation.
That it is a mandatory part of regaining our dignity.
Being a slave is not an option.
Slavery is something forced upon us.

Slavery is something we have to recognize, confront,

and work to ending as being a part of our lives.

Yes, we have to stop being ignorant
and cowardly, but first we have to
stop behaving like white people.

Stop the gangs
Stop the killings
Stop the drugs
Stop the killings
Stop the ignorance
Stop the killings

We are killing ourselves with ignorance and selfishness.

We are a great people
We donï¿½t need all these gangs and killings
and ignorance and cowardice.
Those are the white manï¿½s tools to keep us slaves.
We need liberation
We need a new liberated generation
We need a new generation of warriors
We need true courageous liberating warriors,
men and women warriors
Loyal to their people
Loyal to liberation
Liberating everyone of us,
men and women,
young and old.

We can do
without the white man in our lives
We can do
without assimilation
Assimilation
is death for us
Colonization
is death for us
Occupation of our continent
is death for us

You need to know
we are under European
parasitic control
of our continent,
of our lives.

Colonialism
is racist
Colonialism
is parasitic
Colonialism
is immoral
Colonialism
is genocide
Genocide is the planned killing, destruction,
and enslavement of our people,
serving the greedy European pirate interests,
the interests
of the European colonizers on our continent.

We are under occupation
That means we are enslaved to Europeans.
That means
theyï¿½ve stolen our continent.
That means
theyï¿½ve taken our wealth from us.

That means
that theyï¿½ve taken our farmlands,
our oil, our gold, our mineral resources.
So that now, we are reduced to

paying them for our own land,

for bits and pieces of our own continent.
We pay them for our own resources.
That means we are being made fools of!

This enslavement of our people

and theft of our wealth

is what colonization is all about.
Itï¿½s the enslavement,
rape, impoverishment,
and destruction of our people.

This is what enslavement is all about.
But this is about more than crimes
of rape,
theft,
slavery,
and other savage
European crimes.
This is mostly about the Genocide of our people.

We are alive
but we are as if we are dead.
We exist
but only as the property of Europeans
or Eurocentric in our minds,
a self-hating people.
We are the living dead.

All this you have to know
You have to understand this
in real
blood and bone
breath and heart terms.

We are NOT hispanic
We are NOT latino latina
We are NOT european
or half-european
and NOT mestizo
and NOT raza.
Mestizo and raza
are the spit of the spaniards.
The rape of the spaniards
The insult of the spaniards

We are not american
or mexican american
or latin american
or anything but Nican Tlaca.
Indigenous,
the owners of this continent
the true owners of this WHOLE continent.

Donï¿½t let them steal our heritage!
Donï¿½t let them steal our Nican Tlaca Identity.
Donï¿½t let them steal our ownership
of this continent.
This continent is not ï¿½Americaï¿½ or "the Americas"!
This northern continent is Anahuac.

The whole "Western Hemisphere" is Cemanahuac.
We are the Anahuac nation on this northern part

of Cemanahuac.
We are Nican Tlaca, Indigenous
to this continent.
We are cultural descendants of the Mexica,
our last great civilizations,
the only one from which
we can reconstruct our united nation,
Anahuac.

The white manï¿½s days
on our continent
are
limited
Limited to how big our courage grows.
Limited to how strong our knowledge grows.
Limited to how fast our discipline grows.
Limited to how quick
all our people know
about liberation
and Anahuac.
Anahuac and liberation.

Remember
that our numbers are growing
in ï¿½The United States of Americaï¿½.
We were only 4% in the 1970 census.
We were 14% in the 2000 census.
We are projected to be 25% in 2020.
We are projected to be over 50%
of the population of the ï¿½Western USAï¿½ in 2050.
We will easily be the majority
of the population of the "USA" in 2100.
Weï¿½ve got to be prepared for liberation then
by getting knowledge now.

This is our continent
but we donï¿½t control it,
but it will be ours again, in our control.
Remove all doubt!
This is our continent!
We have no other home!
Europeans have a homeland!
It is called Europe.
Yes they have a homeland.
Itï¿½s called Europe.

It's not like they have nowhere else to go.

Theyï¿½re here by force
Itï¿½s a forced in
entry.
Illegal entry!
Trespassing!
They are trespassing criminals!
Pirates, thieves, slavers, liars;
killers of 23 million of our people
in Mexico and ï¿½Central Americaï¿½.
10 million more of us killed
in Canada and the ï¿½U.S.ï¿½

95% of us were killed by Europeans.

Let's repeat this so that it sinks in:
Europeans are Criminals occupying our continent,
killers of 23 million of our people
in Mexico and ï¿½Central Americaï¿½.
10 million more of us were killed
in Canada and the ï¿½U.S.ï¿½
95% of us were killed by Europeans.
in the 1500ï¿½s, 1600ï¿½s, 1700ï¿½s.

They killed 33 million of our people,
95% of us in Canada, U.S., Mexico,

and ï¿½Central Americaï¿½.

And another 40 to 70 million more

were killed in what is called

"the Caribbean" and "South America".

It didn't stop there,

they did this smallpox weapon of mass destruction monstrosity

in Hawaii, South Africa, and other parts of the world.

We were killed by those savage Europeans
with biological warfare, the use of smallpox.

That is the dirty little monstrous secret
of the great white race.
Smallpox as a weapon.
How brave.
How honorable.
How proud they must be.
How monstrous.
Destruction of our civilizations
with the use of weapons of mass destruction
so that they could take our land---our continent!
Our land ready for farming.
Our land full of gold and silver.
The bountiful forests.
The huge land mass that is our continent.

Yeah, sure, they "earned" our free resources.

That's like a thief who breaks into a jewelry store:

he earned all the diamonds, the gold, the wealth

that he stole

because it was a lot of work breaking into the jewelry store.

Killing the owner of the store and its employees

was also a bit of work.

Now that thief can enjoy the fruits of his "labor".

What if we all did that.

Europeans have been doing just that to the non-white world.

We are the 5% that survived that rape and robbery.
We are the 5% that survived
We are the 5% surviving
We are the 5% surviving as ignorant slaves.
They need us to remain ignorant.

Again we need to be clear on our identity
Forget American.
Forget the limits of Aztlan, the ï¿½Southwestï¿½.
Those are the limits of the Spaniards
to where they stole our land,
to where they went on our continent,
to who they raped of our people.

Those are the limits of the Spaniards.

Forget Aztlan and the "Southwest"
as the limits of who we are.
Look at this whole continent,
This entire continent

is ours.

Forget "Native American".
Forget Indio.
Forget Mestizo.
Forget Mexican, Salvadorian, Guatemalan.
Forget Chicano, Chicana, Honduran, Nicaraguan.
Forget ï¿½Native Americanï¿½, ï¿½Central Americanï¿½,
and ï¿½Costa Ricanï¿½.
We are all one people.
We all one nation.
We are all colonized.
We all need to be Anahuac-centered warriors
in order to be liberated.

We are the Anahuac nation.

We are the Mexica people.

We are Nican Tlaca, the people of this continent.

Without all our continent free,
without our people united as Nican Tlaca,
we will remain slaves to the Europeans.

Remember this whole continent
has been stolen from us.
Forget
the false separate red and brown,

Indian and Indio,

and the racism of mestizo and raza.
Africans who get raped by Europeans are called Mulattos,
and their children are part of the African race, not part of the
European race.
Nican Tlaca (Indigenous people) who get raped (or "married")
by Europeans are called Mestizos, and we are part of the Nican Tlaca race,
we are not part of the white raceï¿½and we are not part of some "non" race
called Mestizos. Mestizos as a non-race serves the white race as slaves.
And forget "American" and Canadian.
Forget concepts of even ï¿½Central Americanï¿½.
We are one people.
This is our land.
This is our continent.
This is our land.
This is our continent.
This is our only home.
We have no other home.
Europeans have Europe to go home to.
This is our only home.
We are slaves in our own home.

That is wrong in any culture, under any laws.

It is a crime against our humanity.

The genius of our people
is being wasted away.
Canï¿½t you see that.
Wonï¿½t you see that.
We have to learn, teach, confront,
lead collectively.
Letï¿½s wake our people
Letï¿½s shake our people
With knowledge of Anahuac
and putting up examples of courage
in how we live our lives.
Discipline and honor!

This is our continent!
We need our liberation!:
That is the order of the day
the order of justice
the order of our destiny

But today we are still slaves and fools
Our land is still stolen.
Our continent is still occupied.

But in truth, in justice, in reality
we are not rightly their slaves, their property.
And of course our continent
is not theirs,
no matter how many times
and in how many ways
that they say our land is theirs.

But we still need

to say, to shout,

"This is all our continent,

not one inch of our continent is European

or "American" or Canadian or of the Spaniards.

But still
we are still
mostly ignorant of all of this, so how can our people

say it if they don't know it.
Most of our people are ignorant and cowardly.
We have no leaders.
We have no knowledge.
We have no warriors.
We have no future.

We have no past.
We have no honor.
We have no discipline.
We live in cowardice.
We live in ignorance.
We live in the whitemanï¿½s hell.
It is their heaven
to have us
as the white manï¿½s punks
the white manï¿½s slave,
the white manï¿½s fool.

But all of this can change.
All of this must change.
All of this will change.
The Romans fell and they are gone.
Greece all fell apart and they are no more.
The Nazis fell to ruins and they are but a memory.
Liberation is our destiny
and Europeans will be gone
from our continent,
of that
there should be no doubt.

Remember,
we are growing in numbers.
We need to grow in knowledge.
We need to grow in courage.
We need to grown

in unity.
We need to all be

part of the plan
for liberation
of the Mexica Movement.
We need to speak in unity, in one voice.

We can change our condition
from this European hell we are in
to the road to liberation.

Our liberated destiny.
A destiny free from Europeans.

With knowledge
everything changes.
This is Anahuac,
this whole continent is ours.
This is Anahuac.
With knowledge
everything changes.

We are the people of Anahuac.
This is our continent.
We are Nican Tlaca, Indigenous.
We are Nican Tlaca,
the true owners
of this continent.

This is all our land.
Forget the borders.
Forget brown and red.
Forget English and Spanish as ï¿½ourï¿½ languages.
Forget the traitors amongst us
and the cowardice that dominates our people.
Forget the whitemanï¿½s money and individualism.
Forget selfishness and greed.
Forget the monstrous self-hate forced-upon-us:
wanting to be white.
The racist trick of wanting to be white is suicide.
They trick us
to be wanting to be white.
We are not white.
We are not European.
People of European descent are white.
We are not white

Malcolm X
was part white.
Yet his identity was not
as a part-white black man.
His identity was not part black.
His whole being was African.
So the same goes for us
if we are scarred with white blood,
that rape does not make us part white.
It only makes us victims of rape, of slavery.
It makes us victims of occupation of our continent.
It makes us victims of the occupation of our DNA.

We say
to our people who want to be European:
Be European in Europe!
Europe is the white land.
This is not the whitemanï¿½s land.

This is not the whiteman's continent.

To those of our people
who are awake,
who are not playing headgames,
who are not cowards,
who are using their imagination,
who are not into posing revolutionary;

to those of our people,
sincere, intelligent, dedicated to justice,
dedicated to the liberation of our people;
to you, we say:
itï¿½s time for liberation;
itï¿½s time take action.

Action against our ignorance.
Action against our oppressors.
Action against the occupation of our continent.
Join the Mexica Movement.

But please donï¿½t begin liberation
by participating in unearned rituals.
Please not in false rituals.
Liberation is not about
dressing up as a warrior.
Itï¿½s not about pretending to be warrior.
Itï¿½s not about pretty poetic mystical words
or incense or dance or sweatlodges or peyote.
Itï¿½s about courage and discipline.
Itï¿½s about learning our history
so that we can liberate with that knowledge.

Not enslaved to cowardice, false rituals, and other bullshit and treason
that dishonor our ancestors.

Cuauhtemoc was not eligible to participate in the rituals
and sacred dance on the feast of Huitzilopochtli
when the top leadership was massacred by Spaniards.
10,000 of our unarmed generals, teachers, top warriors, and other
leaders were killed.
Cuauhtemoc was not there because he had not earned the right to be there
in the sacredness of those rituals.
That's the only reason why he was later alive to be elected ruler of the
Mexica.

But today any mocoso or mocosa feels qualified to do "Aztec dance"
and other ceremonies that were only permitted to those who had earned them.
Cuauhtemoc had not earned his place in sacred rituals
but today's danzantes feel that they are better qualified than Cuauhtemoc.

There is so much dishonor today amongst our people.
Liberation is about regaining our people's honor.
Itï¿½s about stopping the monstrosity of
being simulated white people
Itï¿½s about reconstructing ourselves as Nican Tlaca.
Itï¿½s about confronting
the enemies of our people.
Itï¿½s about confronting the traitors of our people.
But itï¿½s not about rituals, dancing, or music.
Those are the sacred things that must be earned,

in altruistic warrior ways.
Earned ritual is always about warrior societies, women's societies.
Earned is about knowledge and courage.
Earned is about having achieved honor.
Earned is NOT about
entertainment and exhibitionism for white people.
Earned is not ï¿½folkloricoï¿½ or theater.
Earned is not about feeling good
or dressing up as a warrior in unearned regalia.

Liberation for our people
is also not found in Christianity
and not in gangs
and not in Marxist agendas.
And itï¿½s not found in the Hip-Hop or Rap
---music that has betrayed the roots of
revolutionary thought
and replaced it with shit and vomit,
opportunism, and treason to every cause
Hip-Hop or Rap ever had.

And participation in Capitalism
is not about liberation.
Liberation is not about money
and its not found in sports or drugs
and not found in cars or clothes
and not gained when you pose macho cool.
Itï¿½s not about that white man named Che.
We donï¿½t need no pinche Che!
We have Emiliano Zapata,
land and liberty,
our continent and our liberation.
We donï¿½t need no pinche Che.

Liberation is collective, not individualistic
or having it your way
---everyone deciding individually,
ignorantly, Eurocentrically,
how liberation is to be achieved.
That is assured defeat.
10,000 people having it their own ignorant selfish way.
100 people each having it their ignorant way, each on their own.
20 groups having it their way, most operating on ignorance,

most refusing to study or to have the discipline of warriors.
That is how we have been defeated
for 500 years.
We have to have collective unity
under the Mexica Movement,
or we can continue with
everyone doing it their own way
to assure our defeat.

Every 15 year old declaring his/her
own version of liberation.
Every one who reads our plans
will now come up with a plan.
Where were their plans before
we made this call for liberation.

Individualism is treason.
Selfishness is treason.
To steal the work of warriors is beyond treason.

Unity of disciplined warriors
under the collective leadership
of the Mexica Movement
is assured victory, assured liberation.

Traitors and opportunists have done nothing
and will do nothing
but destroy the work of liberation.
The European has many of our people
willing to serve the evil Empire of Europeans.
Traitors and opportunists are both
the same thing: self-haters.

Liberation is also not about waiting around
for the right time to participate
or procrastinating about learning liberation.

Liberation has been going on since 1992
with the Mexica Movement.
We have been paving the path
to liberation with knowledge
like this material that you are reading
or listening to.

Itï¿½s time to wake up
and to participate.

Liberation time is a time to be warriors,
orderly warriors,
disciplined warrior,
knowledgeable warriors,
real warriors
men and women warriors,
warriors with
collective actions,
united actions,
actions of liberation,
Mexica Movement guided liberation.
Mexica Movement means
being part of the inevitable
liberation of our continent.

The beauty of our people
The genius of our people
is being wasted every day
that you hold back
We are kept
from the wealth of our continent
We are kept
from the knowledge of
our Anahuac civilization
in all its true meaning,
when we fail to be part of
the liberation of our people.

Canï¿½t you see that?
Wonï¿½t you see that?
Donï¿½t be a coward.
Donï¿½t put this off.
Do it today and not tomorrow.
Letï¿½s wake our people.
Letï¿½s shake our people
with Anahuac knowledge
and the courage of warrior example.
Discipline and honor!
Our liberation
Our continent!
Our liberation!:
the order of the day
the order of justice
the order of our destiny

Letï¿½s wake our people
Letï¿½s shake our people
With knowledge and courage
Discipline and honor!

Mexica Movement!

These are the words and actions
of the Mexica Movement.

Mexica Movement!

Anahuac Liberation Now!

Make the move.

Liberate yourself
so that you can
liberate our people.

Make the move.

Join the movement.

Mexica Movement! Now!

"Sweden" and "Iceland" is David's "shorthand" for "places where there
are only white people".

I personally am trying to figure out why my neighborhood is suddenly
flooded with what appear to be attractive young Danish women. We've been
invaded by the Nordic Bikini Team! But it's not true. They all have
accents that sound like Baltimore or maybe Hagerstown to me.

David seems to think that and of the european nations which were the
origins of many of the "white Americans" would be happy to have their
expatriates return to the homeland. So far as I know, only Germany has
made that offer. I would qualify under their "German heritage"
requirements, but who wants to go to Germany, it's all full of Germans!
Speaking German! No wonder we all emigrated. ;)

I did not post this.

Same guy using the same open news server. Anybody can post through this
server with no verification whatsoever using whatever email address and
other headers that you can normally configure your news reader to post
articles with as their is no check made by the guy running this server.

This takes no brains at all to do. It takes no guts either to post
anonymously. It is actually easier to post to this open news server than
my own ISP's news server, which requires authentication.

Maybe so but neither country fits that description.

Yes, that is the main problem with foreign countries, they are full of
foreigners!

why is suspisous that I posted only 8 minute from the forger

the same Ip adresses likely apear in both along with 10,00 or other
posts

what is supisous is YOUR efforts to restorethe originalnonsenical title

but hardly conclusive in any case

the question is why would I post such a forgery?

if I had a reason sure maybe I would do it but since it gains me othing
why would I do it

> 22:36 4:58 13730 AM 15720 DRM 19 All Pacific 0ï¿½ Daily

Looking at this frequency schedule the
16:51 18:50 6095 AM broadcast does not propagate to me at all.

19:51 22:35 15720 AM is currently weak.

22:36 4:58 13730 AM was very good yesterday.

That reminds me that ibiquity's stylized "HD" symbol looks like a recycled
version of the cryptic CH symbol found on the once- common high density 1.44
Mb floppy disks. I'd think a company as aware of marketing as ibiquity
would have been more sensitive to the image of a short digital lifecycle.

Yeah, it should continue to improve throughout that schedule segment.

It's coming in better now than 20 minutes ago but still a little noisy
S3 to S7. 13730 will be much better later.

NZ and Australia will be both better late afternoons and evenings.

Both countries fade for me late mornings to early afternoon and are good most of the rest of the day or night.

Well, now as I type this they are doing worse S2 to S5.

With modern circuitry, the phasing networks are near-perfect, with far better effective shape factors than what one gets with even the most expensive physical IF filters.

Additionally, a synchronous detector using its own phase shift networks for USB or LSB interference cancellation has a 6 dB S/N advantage over using IF filtration to cancel one sideband.

That is because the Q channel contains INTERFERENCE ONLY and virtually NONE of the desired station's audio. The Q channel is in an audio null for the DSB information. Therefore, the phase cancellation works on interference only, and the full phase reinforcement of the desired DSB audio gives you 6 dB stronger desired audio (yes, 6, not 3, because of phase coincidence) than one sideband alone.

With all good wishes,

The AMers (and low-power FMers) would have been much better off pushing for all licensees to get a digital channel in a dedicated (non-mediumwave) digital band, where all the nighttime interference would be nonexistent, where AMs and FMs and low-power stations and high-power stations would have started over on an equal footing and with absolutely perfect coverage of their markets.

But they were sold a bill of goods by the big chains, who wanted to preserve the superiority of the facilities they had paid many millions for -- superiority over the small station owner.

IBOC preserves the inferior -- some might say hopelessly, impossibly inferior -- status of the small broadcaster. And that was its primary purpose all along. In short, these small businessmen have been totally snookered and hoodwinked.

Like the DX listener and the ordinary listener, they've been unfairly cheated out of digital technology's promise and the excellent service to the community they could have had with a

dedicated digital band.

With every good wish,

Hello! I would like to buy a "portable" tabletop (not too big and heavy!) SW somewhere around $500 or less but I will be using this in brasil on the east coast and mostly want to pick up the BBC and stations from Nigeria and Mozambique. I read in the Passport there are certain radios better at picking up signals in certain areas of the world but don't know which is which. Also, it is very confusing all of this about antenaes, some you need on tabletop, others no. Any ideas?? thank you for any and all help

DE,

English Language Speakers who are Radio Listeners who
happen to like to hear News-Talk Radio in their own Language.
These same Listeners like Music that is in a Language that
reflects there own Culture and Heritage. Then again some,
because of Deep Religious Beliefs 'choose' to Listen to Radio
with Religious Programming and Music.

-IF- This is All True for English Language Speakers :
Then it also holds True for :
* Spanish Language Speakers
* Vietnamese Language Speakers
* Chinese Language Speakers
* Korean Language Speakers
* Portuguese Language Speakers
* All Groups within a Community with a Common Language
and a desire to Listen to Radio.

People Listen to the Radio for 'personal' Enjoyment :
* The Be Informed
* The Be Entertained
What 'people' Choose to Listen to on the Radio
IS "About" - Who "They" ARE [.]

The Business of Commercial Radio is Attracting Listeners
by Fulfilling their Radio Listening Needs and making Radio
Listening Enjoyable for them.

With respect to Over Modulation of Mariachi Music on Radio
-if- You have every heard a Large Band play it in a public square
- You understand why it sounds that way on the Radio.
- - - The Sound -Is- The Way It Sounds !

at least that is my opinion ~ RHF

Unfortunately, Mozambique is no longer on shortwave. Radio Terra Verde, Maputo, was heard in April of 2005 on 7135 but apparently has not been reactivated since then.

The only thing out of Sao Tome and Principe would be the Voice of America relay station.

> I am looking for in
> portuguese in africa, also angola speaks portuguese.

Angola:

Radio Nacional is supposedly on 4950 24 hours a day and Radio N'Gola Yetu is supposedly on 7216.8 24 hours a day in vernaculars.

Here is a good schedule to look at for transmissions in all languages:

http://www.susi-und-strolch.de/eibi/dx/bc-a06.txt

And for Africa in particular look at this page, click on Articles Index Page, then click on Africa on Shortwave - by Country:

Mayra:

- Just an idea:

You could get a Grundig 800,

http://www.universal-radio.com/catalog/portable/0800.html

and hook it up to an external antenna..

http://www.hard-core-dx.com/nordicdx/antenna/wire/lantenna.html

fed with a co-ax lead in,

http://www.hard-core-dx.com/nordicdx/antenna/feed/feed1.html

get a schedule, tune in

and see what you get..

Hopefully, you live out in the countryside, in an Interference free
environment;
away from TV's Florescent lights, A/C's etc.

Shortwave is reall mostly about antenna; I have picked up all kinds of
signals with

a $20 portable and a short length of wire when way out in the country
in the evening..

~H~

DX Ace - You have Your Opinion -and- I have Mine.

My Opinion Is - Yep "DE" is Hispanic -WHY-

Is Spanish Spoken in the Home ?
- Yes -

Do You Self-Identify as a Hispanic / Latino {Chicano} ?
- Yes -

Where Did You Acquire Your Hispanic Identity ?
+ As a Teenager in Mexico
+ And later as an Teenager and Adult in Ecudor
+ Did you spend Five Years or more Overseas in a
Country listed as a Country of Origin for Hispanics ?
- - - Were You a Minor Child at the Time ?
- Yes & Yes -
+ Did You Attend Public Schools and/or Universities
in those Countries and was the Instruction in Spanish ?
- Yes -
+ Were You Employed in Business, Commerace or
Education while you were Overseas ?
- Yes -

I agree. When it was reported that Washington was sending forged letters
from soldiers in Iraq to community newspapers the lunatic right didn't
seem to object at all. Why start now?

Remember these examples?

http://www.sourcewatch.org/index.php?title=Letters_home

there are lots more of them out there, along with a lot of very pissed
of CITIZEN soldiers who were being used. Nothing like risking your life
for democracy and truth just to be deprived of it all.

The lunatic right, so ineloquently represented here, want to be a part
of the FINAL solution. Remember the planned death camps for enemies of
the State? I wish we could go back fifty years in time and put the

BB,

Some people {often minorities within a country} are overly
sensitive to certain elements of their culture as it is
transformer from the country of their origin to the place
that they are living in.

So-called Mexican Food in the USA should be viewed as a
Regional variation of Mexican Cooking as Mexican Cooking
varies throughout Mexico itself : Tex-Mex - South-West - Chicano

After all in the USA you will see Chinese Restaurants with
a Sign that Says : "Chinese and American Food Served"
-but not- in Canada because in Canada the Sign will Read
"Chinese and Canadian Food Served" :o)

America a Smorgasbord of Foods and Cultures
God {Allah} Bless Them One and All -Amen ~ RHF

CompUSA was offering both and XM and a Sirius receiver free after the rebate last week in their sales flyer.

The Sirius receiver was a model number SIRPNP3, CompUSA SKU 319905. It was $50 before the rebate.

The XM reciever was a model number XR9, CompUSA SKU 329567. It was $30 before the rebate, and it was a clearance item. When it was sold out, there would be no more.

There's a bricks and mortar CompUSA near me. I don't know if the offer was available online as well.

Without the subscription, they are paperweights, so I didn't get either.

DE

You must realize that Your Definition of what is "Real"
Mexican Food {Puro Mexicano} in the USA may vary
greatly from that of Mexican-Americans {Chicanos}
who have been here for generations.

Culture Changes {Evolves} with Time and Place and
the Hispanic Culture within the USA is related -but-
Distant from the Hispanic Culture of other Nations.

Food often within a Culture has a Regional Aspect
and with Time Mexican Food within the USA has
become Mexican-American Food, Tex-Mex Food
and South-West Cooking. Each within their Regions
is a Valid Element of their Regional Hispanic Culture.

Right Now ! - There is a Hispanic Culture developing
in Canada that is distinctly Canadian and different
then the USA.

-IF- America (The USA) Is 'About' Diversity : Then Clearly
The-Hispanic-Culture within 'The Americas' IS "About" Diversity.

Self-Acceptance and Self-Respect is "About" Being Your-Self
- Enjoy Your-Life and Being Your-Self ~ RHF {ibid}

Same here. For me, the only shortcoming it has is a lack of a computer interface port. With all the memories it has, that shouldn't be too much of a problem. The build quality compared to the communist Chinese Grundigs is excellent. I think I'll start saving now.

It appears that the DRM signal on 15720 went away at the same time. In
any event I heard the DRm noise on 15720 before I went on to listen on
13730 and at 02:30 UTC the DRm signal is also missing.

Checked their web site and don't see anything about a problem or a
scheduled shutdown.

684. Shortwave Broadcastband Transmitter Site Archive

Newsgroup: rec.radio.shortwave
Date: 2006-06-06 02:35:02 UTC
From: shortwavesites@gmail.com
Message-ID: <1149561302.401891.161930@f6g2000cwb.googlegroups.com>
Source record: 77517

The early stages of a shortwave broadcast band transmitter site "Archive" (or Repository) with separate files for current & extinct SW sites is being compiled. Emphasis is on "ACCURATE & SPECIFIC" descriptions of sites & accuracy of information.

The existing database produced in Excel needs alot of work. But it needs your help to build it to a respectable & accurate state. There are many DXers with an interest in this information & many who have knowledge of sites in specific countries.

If you are interested in helping with this project for ALL DXers. Please visit the site below

http://groups.yahoo.com/group/shortwavesites/

Enquires can be directed to shortwavesites (@) gmail.com

This site is specifically for SW sites & is in no way related to the Transmitter Documentation Project which lists details of specific SW transmitters at sites.

I look forward to your assistance.

Regards

Ian

Site owner

I concur. Rod Stewart starts singing and off the air they go AGAIN.
Well, it WAS Rod Stewart. I can't blame them for going off air...

Now, the analog transmitter went off again on 13730 and the DRM signal
is still going on 15720 at 02:51 UTC.

Source record: 77521

David,

- Yes - That is now one element of what can be
used to classify an Individual as being Hispanic.

Usualy -if- you have a Spanish Surname anyone
other than yourself can simply use that fact that
you have a Spanish Surname as the basis to
classify you as a Hispanic.

Even 'if' You did not have a Spanish Surname.
Some one reviewing an Employment Application
who sees that you were born in a Country that
qualifies you to be 'classified' as a Hispanic can
simply use that fact as the basis to 'classify' you
as a Hispanic. Particularly if you remained in
that country for several years before coming to
(returning to) the USA. Children of American
Citizens that are Born Overseas, and who grew
up in a Country of Hispanic Origin can often be
so 'classified' as Hispanic.

I have know of individuals who fought to have
themselves de-classified as Hispanics and
others who where briefly married to a Spanish
Surnamed Male; who then Retained the
Spanish Surname so that they could use it to
their advantage. Both were 'legally' Hispanic
and both were entitled to their self-identification
as Non-Hispanic and Hispanic.

There is one company that I know of with Offices
in the SF Bay Area with the name O'Hare {Rabbit}
that in Mexico is named O'Gare :o) Names change
to fit the locality. The are many Hispanic who's
Families have Drop the "Z" at the end of their names
and have had to prove through Birth Records that
at one time the Family Name ended in a "Z" and
thus by their Ancestral Surname they were in-fact
entitle to be Classified as Hispanics.

it's a small {confusing} world after all ~ RHF
.

Apparently the RNZ transmitter can't handle Rod Stewart.

RNZ just came back on 13730 at 02:56 UTC.

YAHOO ! Group : " shortwavesites "
SWS => http://groups.yahoo.com/group/shortwavesites/

Name - Shortwave Radio {Broadcast Band} Transmitter Site Archive
SWS => http://groups.yahoo.com/group/shortwavesites/

Group Description : Hello & Welcome to the Site.

This Yahoo Group has been Developed for Shortwave Radio Broadcast Band
Radio Enthusiasts, SW DXers & Clubs, Radio Historians & Shortwave Radio
Engineers for the greater purpose of eventually (when the project is
near completion) gaining accurate information about both current &
historic Domestic & International Shortwave (SW) Broadcast Band Radio
Station Transmission Site Data.
SWS => http://groups.yahoo.com/group/shortwavesites/

The site hopes to be the 'One Stop Shop' where DXers & Enthusiats can
DOWNLOAD continuously updated Microsoft Excel Spreadsheets (two files)
on both current & extinct Shortwave Broadcast Radio Transmission Site,
ie one for each.
SWS => http://groups.yahoo.com/group/shortwavesites/

I very much Welcome Input from Contributors & Volunteers by way of:
News & Assistance with Editing Sections of these Files which are
intended to be Freely Available to All, but should only be available on
this Website to ensure that Users obtain the very latest Files.
SWS => http://groups.yahoo.com/group/shortwavesites/

I Welcome your Feedback & Assistance. Please use the Message Area to
Input your News & Information of Changes, Additions, Deletions & Moves
of Shortwave Transmision Sites. Relavant Articles are also Welcome
here. Private Information & Offers for Voluntary Assistance with the
Archive Project should be directed to:
shortwavesites@gmail.com
SWS => http://groups.yahoo.com/group/shortwavesites/

Thank you.

SW TXER SITE ARCHIVE Administrator
SWS => http://groups.yahoo.com/group/shortwavesites/
.
.
that's it - that's all - and now you know ~ RHF

>
Found some reports from DRM'ers in Europe who somehow acquired the KK-DRM01
last fall: http://www.drmrx.org/forum/archive/index.php/t-1147.html . It is
not a DRM receiver in its own right but has a 12 kHz IF output for software
decoding. It works with Dream but appears to have pretty high phase noise.
Might work OK with other DSP demodulator modes, e.g., synch AM, ECSS, AM,
SSB, ...

The early users were not enthusiastic - the SW range is discontinuous:
"2.300 - 7.300 MHz in 5 kHz steps and
9.500 - 26.100 MHz in 5 kHz steps."

Tom

Digital Voice is allowed. Check out Icom's D-Star at

http://www.icomamerica.com/amateur/dstar/dstar2.asp

D-STAR, a standard published in 2001, is the result of three years of research funded by the Japanese government and administered by the JARL to investigate digital technologies for amateur radio. The research involved Japanese radio manufacturers and other observers. Icom provided the equipment used for development and testing. D-STAR radios and repeaters have been tested extensively and are now ready for public use.

D-STAR is an open protocol - although it is published by JARL, it is available to be implemented by anyone. (For definitions and explanations of terms, there is a glossary on page 6.) While Icom is the only company to date that manufactures D-STAR-compatible radios, any equipment or software that supports the D-STAR protocol will work with a D-STAR system. D-STAR systems can be built using both commercial and homebrew equipment and software.

Long, long ago. Before the Census started asking the Hispanic Question in
1980.

Otherwise, Vicente Fox would not be Hispanic. Fujimori, former president of
Peru, would not be. And all these others:

Assad Bucaram Mayor of Guayaquil
Carlos Menem President of Argentina
Bernardo O'Higgins, Liberator of Chile.
Alfredo Stroessner President of Paraguay
Enrique Rikenhoff Puerto Rico Olympic Committee.
Jos&#65533; Liberman Radio Station owner in Mexico
Jacobo Zabludovsky Mexican news anchor
Raul Astor Argentine Comedian

And so on.

Deaduardoodoo is genetically incapable, and financially has no desire to do anything but accelerate the invasion. The invasion of mestizos is bankrolling his ass. Here is some information on his fifth column ass: Start here - www.davidgleason.com. And if this is not enough material for you, google "David Gleason".

October 2004 edition of "Tattler".
http://www.main-st.net/tattlers/041008.pdf
Wisdom from the NAB Convention! We couldn't help but notice

interesting exchanges during the "Supersession" at this week's
NAB confab (and the Conclave thanks that esteemed
organization for borrowing the title and concept of quizzing a
stage full group heads.something the Clave has done for
years!). Cumulus' Lew Dickey declared that it was up to his
local staff to connect with listeners. Univision's David Gleason
told the crowd that radio should focus on listeners, not on the
market. Radio One's Mary Catherine Sneed is quoted as saying
"Product has to come first. I see PD's following each other, and
that kind of behavior will put our industry to sleep." Greater
Media's Peter Smyth and Citadel's Judy Ellis called for the
industry to use the Howard Stern defection to satellite radio as
an opportunity to increase the development of local talent.
When asked by R&R's Erica Farber how radio can be hip again
the blue ribbon panel told the NAB crowd, "Do a better job of
promoting new talent and programming." Okay. So, how can all
that be accomplished? While you ponder the question, here's
one answer. Support the Conclave. The Conclave may be the
only organization in America that is solely dedicated to building
strong air staffs and programmers. That's its mission because
the mission of radio is to serve their public's interest. It's great
that Mr. Dickey, Mr. Gleason, Ms. Sneed, Mr. Smythe, and Ms.
Ellis have declared serving one's audience as a priority for their
companies. As a result, the Conclave invites them to encourage
participation by their employees in the Conclave process, whether
it is attending next summer's Learning Conference or a Conclave
TalenTrak.

That is intersting. Puerto Ricans have not fared well in Miami in
personality shows... language, culture and style are terribly different from
what is popular and acceptable in Miami.

> Tampa and NY or Jersey are next and in may or june, they will flip The
> Beat 103.5 to Hurban, so here's the good news: Zeta will survive!

My understanding is that the NY possibilities are near zero, but Orlando
(101.1) and Tampa are iminent as CCU has two dogs that are perfect for
Hurban up there. The problem is that Orlando and tampa have very assimilated
Hispanics, so Hurban may be the way to go. Miami is also a very poor market
for under-35 Spanish, so Hurban would definitely do better than a Spanish
pop.

Maybe you two are reading too much into my original post. I under stand that
the new station, no matter how unbelievable it may sound to some people, can
also be considered a rock format. I do think that I am in the minority now
especially after being a member of this board since klol flipped. I was a
faithful KLOL listener before and will support any new rock station that
fills the void left in Houston, which I hope will happen soon.

> "keep up with the times." Most of them enjoy the oldies.

Not everyone 55+ grew up on Top 40, and that is without even looking at ethnic listening... Blacks and Hispanics are not particularly big partisans of oldies stations.

> We are no different than our parents who continued to listen to Frank,
> Dean, Bing, and Perry and who didn't graduate into Elvis or Buddy or Fats.
> Isn't it only in the last couple years that "Standards" have begun to die.

> format, if it is done right.

There never were any profitable years for real oldies. It was an idea of the last few years... caused by the abandoning of 50's gold by most oldies stations... that did not work because there is little audience and even less potential revenue.

> And to hear the jingles. Now THAT'S entertainment!

Fine, we agree on the need for a complement for the music. However, the demos oldies, especially 50's and early 60's olidies attract, are of little advertiser interest. So there is no reason for a station to program oldies, with or without the time checks and info and humor and banter... since there are very few potential clients. And that is why it is an ideal satellite format, since it can not make money on commercial radio.

Oh, ho, this one is rich:

****http://www.radio-info.com/mods/board?Post=325090&Board=houston

There is an evolving class system based on socioeconomic status. The median houshld income in the US is around $42 thousand. Lets take someone in the top tier of the half of all American families below the median. Income:$30,000 per year. Taxes, around $3,500. If home owner, mortgage cost over $12,000 and utilities and such add $3000. Car expense for the average 2-car family is another $12,000. Food, add $4000 to $6000 a year, So we end up with less than $300 a month in somewhat discretionary income. Do you think broadband, an iPod, a computer, etc., are high priorities?

> > Actually, only around 25% of people have in-home high
> speed
> > internet, and the great bulk of lower income persons do
> not
> > have home computers of any kind. For example, there are still 20% of all
> > Americans who do not have cable due to cost...

> A high-speed connection isn't required. Many dial-ups are getting faster
> and cheaper, as well as DSL and other options.

Dial up has really finite limits, usually around 51 k. DSL is broadband. And the average national cost, where available, after initial offers, is over $30 a month.

> The numbers for the lower income households are varied. But is this the
> market you're concerned with? The households with no disposable income who
> listen to radio because they can't afford other choices? I think this
> argument lacks substance.

Since half of all Americans are in the under $42 k a year income levels, yes, we are interested. They consume cars, products, shop at wal Mart, etc. There are more millionaikres in the US than iPod owners... does that tell you something?

> I believe we differ on what we consider good to great radio. When I talk
> about what is good radio, I'm not referring to the business aspects of it.
> I'm referring to the quality, the creativity, and the appeal. If more
> radio professionals would be concerned with producing a good on-air
> product and less with the dollars, I believe they would see their audience
> increase and hence their advertising dollars increase.

There are no good unprofitable stations. It is necessary for the business model to work for the programming to be good.

> What you're saying further illustrates my point that radio isn't concerned
> with putting out good radio, just with doing business as cheaply as
> possible to make as much money as possible. And that's one way to go in
> business, cut costs, cut overhead, streamline to maximize profits.

Ever since I have been in radio... which is quite a while... owners have been cost-conscious. Where I first worked, we often had to bring our own toilet paper and towels, since the owner discovered if he made us request TP from corporate, consumption declined a lot.

There is no difference today. Businesses do not spend any more money than necessary to achieve thier goals.

> But many of the most successful companies make a commitment to providing
> the best product and best service possible and building relationships with
> their customers. They invest in their business and reap the rewards with
> loyal and satisfied customers. I don't see many radio organizations doing
> this today.

I see almost all of them doing it, and generally, much better than in the horrible days of the 50's through the 70's.

> > It takes much more skill to be a good flanker or niche player, since
> > there are so many options now.

> I simply disagree with that statement. It's always harder to be the best.

Being #1 does not mean you are the best. It simply means you staked a claim to a larger niche. And every format is a niche format Only when lyou get outside the largest markets do you even see a few stations with a 10 share or above.

In fact, of all rated staitons in the US, only 38 have a 10 share or above. There are only 280 with a share above a 6.0. the difference between #1 and #5 in most big markets is usually less than a share point, or, nearly, within the margin of error of the survey itself.

American tastes are fragmented, and have been since the 60's. It is far better to serve well a group, like country listeners or R&B listeners or Hispanic listeners, than to try to be a generalist... which is ususally not possible anyway. #1 stations are, simply, no better in most cases than any other station in the top 10 or so in a market.

> > Competiton did not, even in the raido battles of the 60's,

> > produce better radio. It generally just produced two staitons with
> > ultra-thin playlists, lots of contesting and

> > lots of outside promotion. It was a battle of hot air.

> I believe that was true in some instances but in others it certainly did
> create good radio. Thin playlists are rarely a good thing.

Go back and tell Todd Storz and Gordon McLendon that. The short playlist was an invention of the early 50's, and has proven itself amply. I have never seen a direct battle where the station playing more songs won.

> And contesting and outside promotions when done in conjunction with a
> quality on air product are productive, but when done without a solid core
> the audience just doesn't care.

Here, nothing has changed, for the better or worse, in 50 years.

> > > So where are the next radio stars going to come from?
> > I have no idea in general. Some companies have definite programs for

> > people often do the same on air.

> Which companies are these?

I work with entry level talent and programmers constantly, and it is part of my job. It ranges from making a janitor an on air personality (I heard him on mike at a party where his band played) to taking a good air personality and making a PD out of them done that a dozen times in last 5 years). I know colleagues in other compaies that do this, too.

> I've heard of people with on-air experience already, getting in a ground
> floor position and working their way up. But then there is the problem
> again of where to get that "on-air experience".

Look at the little stations that are all automated or satellite driven...
thanks to 80-90, OSHA, wage and hour rules, and, especially, tort law.

> > The tiny-market ma and pa station still exists. But it is hooked to a
> > satellite because 80-90 put 3 more stations in

> > staff to the bare minimum.So small market training is far less available
> > today than it was 15 to 20 years ago. Blame

> > the FCC, not radio.

> I blame the Telecommunications Act of 1996.

Well, there is not a shred of evidence supporting that.

Here is a good piece of 1990-era data.

Lake City, FL had one FM and two AMs in 1988. The AM-FM combo did hours a day of local programming, including a local news block three times a day. There was a hospital report, high school sports, police blotter, fund raisers, parade coverage, etc., etc. Station was profitable, although not a gold mine

1992. FCC had dropped 4 new FMs in the market of 15,000. New stations all on satellite, sold for cheap. Split revenues 5 or 6 ways. No one made money. Every station on satellite. No local service. want to get the hospital report? Hospital said they could not afford the time to take 5 calls a day, and could not favor one station over another. Same with high school, which opeted to ask for rights payments. Now no one broadcasts games.

That is 80-90, not the 1996 act. 1996 saved many small stations, allowing small market consolidation in places like Traverse City (where 2 stations in 1960 went to 18 today).

> This is an appalling statement. Having a degree means you're LESS
> employable?

In raido, it means the emplyer will have to retrain the person to un-learn them from all the crapp they got in college.

> Because you read a textbook that had theories in it? You think a college
> degree means you don't get practical experience? Have you ever heard of a
> college radio station?

Yeah. I advised several. However, the faculty does not want to hear about the real world. Long playlists, block progrmming, "my favorite mix" and other stuff. Takes years to un-learn.

> They're not just playing satellite feeds, they are student run. But if you
> mean commercial experience, are you saying someone with a college degree
> in broadcasting can't get experience?

With the right attitude, yes. Most end up in sales. You can not teach creativity. I am very glad I did not go directly to college, as I learned to

stay far away from the communications school.

> From my experience, most people who disregard the merits of a college
> education are those who don't have them and are envious of those that do.
> I hope this isn't a common theme in radio. If so maybe that explains it.

Most disregard broadcast curricula. Most offerings, simply, suck. A good mix
of social sciences and business and math will go much further.

> Radio just doesn't have anyone in it with a college degree. I guess that
> would help keep costs down since people with a college degree do tend to
> make more money.

I know plenty of people with college degrees, but very few successful ones
with broadcast degrees. I just hired an assistant (at the VP level) who has
an MBA... I would not have given a moment to one with a masters in
communications.

> I suppose radio will become something like royalty, and sports
> broadcasting, you have to be born in, to get in.

Like other industries, we should do more recruiting from outside the
industry. My recent hire was head of marketing at a niche athletic shoe
manufacturer. He gets "street" and trends.

*****

Interesting!

Even more interesting is that whilst you were on your adventures down south
doin' this and signin' that everything that comes up is either David Gleason
or
David F. Gleason.

Wouldn't it have made sense then to be signing documents David E. Gleason or
David Eduardo Gleason or even David Eduardo Gleason F., especially if one
were
in Mexico and/or South America if that is indeed your legal name?

Interesting as well is that you've made a political contribution(s) back in
2004
where the name recorded is David F. Gleason. Doesn't the law require one to
put
down their legal name?

Also interesting is that that name (David Eduardo Gleason/David E.
Gleason/David
Eduardo Gleason Frackelton) never shows up in anything HBC or Univision
related.
It's always David Gleason or David F. Gleason. Wouldn't an officer of a
corporation have to use his/her legal name?

As you say on your website, you were born David Frackelton Gleason. When did
you

legally change your name to David Eduardo Gleason Frackelton and become a
fake
Hispanic?

Occam's razor. The polls are slanted toward the liberals, so that the
average uncommitted person believes the liberals are winning and votes
in their favor. That's the theory; the people are smarter than that,
and whether you want to accept that or not it will continue to vex and
stymie you and yours.

But, when the phasing method was common, ie almost fifty years ago, they
were using a phasing network that would only be good enough. And I'm sure
when the method is used in the less expensive shortwave receivers of today,
it's for cost reasons (read simplicity and low parts count) rather than
to get improved performance.

Yes, in recent years people have done work on the phasing method that uses
more complicated phasing networks and which pay attention to detail, but
they are no longer simpler.

Note that I'm arguing the point because the poster I replied to seemed
to be comparing the two methods, and did say the phasing method offered
better unwanted sideband rejection, or at least that's the way I read it.

The Armed Forces Radio Revolution
- Chages at the American Forces Network (or AFN)
and American Forces Radio and Television Service (AFRTS)
http://www.strategypage.com/htmw/htmoral/articles/20060605.aspx

June 5, 2006: Since World War II, the U.S. Armed Forces Radio (AFR) has broadcast to the troops, no matter where they are. But declining ratings, caused by iPods and changing tastes, has resulted in massive changes in what will be heard.

Also gone is most of the talk radio (NPR, as well as more conservative shows). Talk just never caught on big with the troops, and many were turned off by the strident anti-war attitudes found on many NPR shows.

I don't recall that ASCII was ever specifically prohibited. When
digital modes were first authorized in the late 1940s, the rules were
amended to allow Baudot code (and a specific implementation). That was
the ONLY digital mode specified in the rules. So ASCII wasn't legal
simply because it wasn't Baudot.

The rules were relaxed fairly quickly once there were requests to do so.

==========

Amateurs may not encrypt a message as to obscure its meaning. Control
codes to prevent unauthorized remote control are exempted. Coding with
open codes (like ASCII) to facilitate communications is permitted.

As to what you heard, there are a few likely explanations:

- someone on the wrong sideband
- D-Star or similar open digital format (I think D-Star only works at
VHF but there are open digi voice formats that work at HF)
- A non-amateur intruder (it's not unheardof for military/commercial ops
to dial in the wrong frequency, say 14178 instead of 14718)
- Spurious response to a strong out-of-band station

Yesterday at the Goodwill store I bought a Sanyo model 258OK MW/FM/Cassette/SW1/SW2 radio.SW1 2.3 to 7.0 SW2 7.5 to 23.0

It is one of those kinds of radios which the power cord plugs into the back of the radio (like my old Norelco electric shaver does) and the other end of the cord plugs into a wall outlet.The cord wasen't with the radio,but I bought the transistor radio anyway.

The radio doesn't work at all,it wont say a thing.I even tried some fresh batteries with the radio.What could be wrong with the radio? I guess I threw two dollars away on some more junk,eh? I dont know how to work on radios.It would make a good doorstop anyway because it is so heavy.

And that has exactly "what" to do with how the surnames of Hispanics do not
have to be "Spanish?"

Yeah, like last week's conservative Supreme Court decision that officially removes all legal protection for public employees who correctly point out ethical indiscretions by their supervisors. Now, *there's* some good protection of individual liberties and Constitutional rights.

In the case of the E1, wasn't the free offer because the batteries blow up, when used with the A.C. adaptor ? Or, maybe they realize the E1 is already an out-dated dog, because it doesn't receive/process DRM, and anyone would be an idiot for spending $500 (plus, doesn't even have an iternal fettire-bar antenna, for AM DXing) ! From RadioIntel.com:

"Over the past three months I came into some money and treated myself to both the Satellit 800 and the Eton E1. However I read where several major SW broadcasters will be going to digital within the next few years. Will this mean that I will be the proud owner of obsolete SW receivers? And what about iBiquity HD radio in the US?"

The big UPS place six miles Eastsoutheast of me in Jackson closes at 1:00 PM,the part where people take things to send them to wherever,it was closed when I got there.A guy over there said the UPS Store in Clinton (Clinton is a city about five miles West of me) is open.So altogether,yesterday I drove about 22 miles,all that long distance driving just about knocked me out.

You still have to have internet (broadband,most likely) access though,of course,you could tote it around and find some Wi-Fi hotspots.I have a Linksys Wireless B Music System radio I bought for about $159.00 at a Wal Mart store about a year ago.I can use it connected to my computer with a cable or I can use it wirelessly up to about 100 feet from my computer.The radio works ok.I dont tote it though.It sits on a shelf by my computer.

AND, why would anyone spend $150 for an E5, when they could get
basically the same radio (same case, with a few changes) with the Degen
1103 for $45 + $20 S&H ! Almost, three radios, for the price of one -
could buy two Degen 1103s,
with one as a NIB backup, plus change ! Grundig/Eton/Tecsun receivers
are cheap, over-hyped ripoffs !

O, so it was just a visit then, not a real move. That would have put a crimp in that gofer job you had at the radio station.

And the 'move' was more than 'couple of years later', wasn't it?

Here it is - George Will writes a good basic summation:

http://tinyurl.com/jq3mo

The upshot is fairly weird - a public employee may not complain *to a higher up* (in other words, as an employee) about ethical misconduct on the part of another middle manager, BUT if he wants to make a statement in public or to a newspaper, *that effort* is constitutionally protected. Somewhere along the lines, something got seriously screwed up, either in the prior court history cited or in the passive neglect of the potential results of this ruling. I cannot see how it makes sense to anyone, liberal or conservative, to chill a person's ability to make sure a public employee is playing fair and held accountable for his/her actions, as long as the person bearing witness objectively portrays the issues. I would think just the opposite would be true.

The decision came down solidly along party lines. I have some theories as to why this is true, but they are tentative at best and unprovable with any information at hand, so I will not discuss them here.

That's just a bit different from this quote:

"I was 13 when I went to Latin America, and grew up there, in homes where
only Spanish was spoken."

It's all coming back to you now...

That could be used, along with an S50, but the S350 would need the 4
"D" sized batteries put in it first, because it is too
light-out-of-the-box !

Actually, the job was on the permanent move, at, I think, age 15. It was a formal internship program with Ramiro Garza, the most successful and famous radio programmer ever in Mexico. The first visit was to do an archeology project in Mexico and Tikal, Guatemala.
>
> And the 'move' was more than 'couple of years later', wasn't it?

About 18 months, in fact. At age 17, I was in Ecuador in High School and putting a radio station on the air.

I went for long intervals, and returned to the US on several occasions for
short periods. The last was to go to Quincy, IL, to buy equipment for a
radio station. But I was living in Latin America most of the time from when
I was 13.
>
> It's all coming back to you now...

No, it is just about how much detail you want. It should be enough to know
that from the end of my 13th year onwards, I spent nearly all my time in
Latin America or in Latino communities in the US. I'm really sorry, but if I
knew you cared that much, I would have saved all my airline tickets.

Before canning it, try some non-lubricating tuner cleaner on the on/off
switch and bandswitches and working them.

I was able to bring a 1960 Blaupunkt Capri AM/LW portable back to life
with liberal applications of cleaner.

Gee, didn't you 'move' to Mexico at age 17? You were born in 1946 and supposedly went to Mexico in 1963. According to your website you didn't show up in Ecuador till 1964.

I think you'd better read your resume!

No, it does not "prevent" anything - That's beside the point, and that's not what a Supreme Court decision does anyway. The decision does make it risky for an employee to report an indiscretion, whether there is such a process in place or not. Having done this, he could be demoted, have his pay cut or be fired on a subjective basis and there would be no legal recourse, because his right to make the report is not guaranteed under the First Amendment. Any public employee who files such a report, to whomever within his place of business, could be penalized for his honesty and willingess to try to correct a wrong.

The simple fact is, a guy was told that for his actions to point out an ethical indiscretion, he must accept being penalized and no court can help him because he has no constitutional right in that regard. He should have just gone to the newspapers, I guess, in which case he'd be protected, at least according to the author of the decision. Is that a better choice?

Good point. I don't know - I haven't seen any differentiation in this regard in the three articles I have read. If you go by the construct of the decision and arguments, it sounds as though this distinction is not the critical matter, but rather the idea is for courts to stay out of internal agency disputes. In the case of a worker with a union contract, other legalities would come into play, I would think, and perhaps for those employees this edict would have less effect. The fellow whose case was heard seemed to be an "at-will" employee, who may not have enjoyed the level of legal protection a union might afford.

The damned I-Pods sound better than AFRTS's product. At least the
Korean AFN-Korea stations!!!

The AFRTS station in Anjong-Ri (Camp Humphries) on 1440 AM sounds all
overmodulated. It's still listenable on better-quality radios, but
only just.

The FM station on 88.3 is worse - it sounds like a buzz-saw. And no,
it's got nothing to do with the hard-rock that they play. ;)

Who the hell can listen to that tripe for a prolonged period of time.
It hurts the skull.

> Also gone is most of the talk radio (NPR, as well as more conservative

The last thing you want to hear after a long day of shooting at
unknown people is some loud-mouth back home sitting in his
air-conditioned studio and talking bull through a tin-horn.

Varied music, with periodic HONEST news updates and balanced commentary
is the best way to go, in my opinion. Of course, don't neglect the
sports events. :)

I wonder what's going to happen to the Uninterrupted Voice Channel
that's broadcast on SSB Shortwave. Figures that as soon as I
contemplate a portable SSB radio, they'll probably take it off the air.
:(

788. Beware of Crane Radio

Newsgroup: rec.radio.shortwave
Date: 2006-06-06 21:22:48 UTC
From: AEZAEL
Message-ID: <ttrb82l2e9veilpr6d1mo2789v3milq3d0@4ax.com>
Source record: 77720

I bought a Sangean ATS909 from them and stored it after trying it out,
after 9 months I put a full set of batteries in it and it would not
work at all. Sent it back to Crane and was charged $ 37.00 and I
was sent a different radio, (I know because I had marked the case
slightly} I tested it again and every thing worked fine.
After 1 year I again tried the radio with new batteries and guess
what ? the radio did not work properly, the sound was very distorted
and when I talked to the people at Crane I was told it would cost at
least $ 89.00 for a new speaker this for a radio that cost #289.00.
I checked the radio out with earphones and the sound was fine
so I am hedging my bets and packing the radio with a good set of
headphones.

David - "Back in the day, Mexicans were considered white people."

David - Not Always -and- Not In Every State.

For a time in California between 1848 and 1850 and beyond . . .
Many so-called "Mexicans" could not Own and Inherit land.
CALIFORNIA => http://en.wikipedia.org/wiki/California

The treatment of so-called "Mexicans" in Texas was not
the same as so-called "White People" {Americans and
European Immigrants}
TEXAS => http://en.wikipedia.org/wiki/Texas
FWIW - Many consider the 'status' of "Mexicans" below that
of the so-called "Negros" for a good part of Texas History.
NEGROS => http://en.wikipedia.org/wiki/Negro

Checking something off on a US {Federal} Census Form
does automatically bestow 'Equal Rights for All' and
"Equal Rights for All" did not mean the same thing in
each State throughout these United States of America.

In the United States of America several Federal Laws have
been called the "Civil Rights Acts" from 1866 to 1991.
CIVIL RIGHTS => http://en.wikipedia.org/wiki/Civil_Rights_Act
Most of them have been ineffective - because it takes
a Generation (about 20-Years) of Living-under-the-Law
for a Society to Accept-the-Law and Live-within-the-Law
as part of the Natural Order of Things within the Society.

so say i - my opinions stated as facts ~ RHF

I once bought a Sangean ATS 909 radio from www.ccrane.com
But before I bought that one,a few weeks before,I bought a Sangean
AM/FM/TV/Weather radio from C Crane Company.Both radios worked ok,but
neither one of them impressed me all that much,so I sent them back.In
all fairness to C Crane Company,they are selling a lot of things.Good
old American Capitalism.It's Great.

At age 17.

> I think you'd better read your resume!

The very term "r&#65533;sum&#65533;" means a condensation.

You seem to have a problem with the fact that a person can be part of a year in multiple places. Like doing late '62 to early 63 in an internship, and alternating between two places starting two years earlier (which was not relevant to radio... I did a published paper on the religious significances of the Mayan ball courts in the second and third civilizations, including excavations in Tikal). I started in radio in 1959...

Tell us a little ab out what you have done, other than insulting Canadians and R-75's.

CCrane has problems with quality control; its problems with the
CCradio are famous, where its display fails and people are forced to
return the radios for a $50 charge. The CCradio, SuperAdio, and S350
are all crap radios.

Source record: 77733

AEZAEL,

QUESTION : Sangean ATS-909 -vice- Sony ICF-SW7600GR
- - - Which is the Better Radio and Offers More Value ?

Having used the Sangean ATS-909 and the Sony ICF-SW7600GR

Sangean ATS-909
http://www.universal-radio.com/catalog/portable/1909.html

Sony ICF-SW7600GR
http://www.universal-radio.com/catalog/portable/0360.html

I preferred the Sony ICF-SW7600GR over the Sangean ATS-909

The Sony ICF-SW7600GR offered a Better Price and More Value
in a 'portable' AM / FM Shortwave Radio - IMHO ~ RHF
.

I visted Mexico in 1992.I didn't need a passport.I parked my raggity old 1978 Dodge van in a hotel parking lot in Brownsville,Texas and I dragged my raggity old Bicycle (I left my real good other Bicycle here in Jackson) out of my van and I crossed over to Mexico.

I had a real good time too.When I came back to Texas,at the border bridge,an American border patrol A..hole guy there on the Texas side hinted that I stole my Bicycle in Mexico.(F..K that Son Of A B..CH!,I hope them Illegal Aliens ''git him!'') Then,I shoved my raggity old Bicycle that I bought at the scrap iron yard here in Jackon on Beatty Street back in my van and I drove my van across that stupid bridge from Texas to Mexico.I like Gral Bravo,Mexico.

Is this a problem because it was from Crane, or is there a reliablity
problem with Sangean products?...I was planning to buy the 909 but I am
beginning to wonder if there might be QC issues with this radio...I
would sure hate to spend $300 on a product that dies after a year...

If you are interested in an inexpensive replacement speaker for your 909, try the url below. It was given me by a member of this group recently, and for a mere 99 cents, I was extremely impressed with its performance. The part number, if you're interested is: 13-404.

I bought a DX-398 at a thrift store that had a bad speaker. I was able
to get a replacement speaker through Radio Shack and installed it
myself. The price was reasonable if I remember correctly.

I have both a 909 and dx398, They're the same radio. Both have been working fine for years. I tried the Sony 7600, but the lack of a tuning knob and a non functioning 'sync' feature made me get the Sangeans. I'm happy.

Dear GP,

Having dealt with the C. Crane Company for many years, I can state that they are a fine outfit with which to deal (though sometimes their prices are a bit on the high side). They do stand behind that which they sell, at least during the warranty period, and, though I've never had to do so, I understand returns are no problem if you happen to be dissatisfied with something you purchase from them.

However, I cannot say the same for Sangean. Having personally owned three of their products (ATS-808A, ATS-606AP, and CC Radio) and having been dissatisfied with all three ('808A died after just three years, '606AP was on its last legs when I packed it up and put it down in my crawl space, and the CC Radio's controls - especially the memory buttons - do not always work properly, plus that radio "ain't all it's cracked up to be" performance-wise), I will not buy any more Sangeans until and unless I read that they have greatly improved their quality-control and that their longevity has greatly improved also.

If you want a good small portable SW radio, consider the Sony ICF-SW7600GR. I believe this to be the best small portable SW radio ever designed. I own five of them and two of the predecessor model the ICF-SW7600G. All are built with a great deal of integrity and all still function as they did when they were new. (And all perform identically - a sign of superior quality-control.) I believe you would be pleased with this receiver.) While C. Crane does not sell it, you can buy it from AES, Universal, or, less expensively, from J&R Music World or Amazon.com.

Best,

Joe

DaviD,

True Civil Disobedience entails breaking an Un-just-Law
and being willing to go to Jail and remain there in-jail until
the Law is Changed.
http://en.wikipedia.org/wiki/Civil_disobedience

Most of the want-to-be Left-Wing Activists don't mind
Breaking "The Law" {any Law} as long as they can Get
Bailed-Out and go out and Break-the-Law all over again.

Like most Spineless Liberals these Left-Wing Activists are
for "The Cause" of simply 'Causing Trouble' and are not truly
Committed to "The Cause" by Doing-the-Time-for-the-Crime.

Question DaviD - Are You Down-for-the-Cause ?
-or- Just another 'Liberal' Political Cadre Want-to-Be ?

david - the world awaits your answer ~ RHF

Looks like NZ is continuing to have problems with its transmitter. I
have been listening to 13730 for hours and they have been missing in
action on that frequency. They just came on at 02:48 UTC today and I'll
see how long that lasts. They should have been there since 22:36 UTC
from yesterday.

You clearly don't listen to NPR. Not only is it fair and balanced, but
they treat the war dead with respect.

The AFN shortwave sounds very good. As I've mentioned before, the
sideband sounds to me like it is wider than your run of the mill
communication sideband. I generally use a 4Khz filter on AFN.

Yes Crane is a fine outfit. YOU'D better re-read the items in your
link. Sure someone complains about the CC Radio - a SANGEAN product -
so do I - but NO ONE complains about C. Crane as a company. C. Crane
doesn't manufacture that radio. They did help design it, but Sangean's
poor execution is not really Crane's fault.

Best,

Joe

Maybe I have should have mentioned that we are currently having a
Geomagnetic storm with Kp 5 at one point but that does not seem to be
impeding my reception of NZ or Australia. The 02:48 UTC was a crash
start with a no signal to S6-S8 levels.

I did notice some pretty bad fading from USA east coast stations earlier
today on the 17 MHz band. At the same time Australia was very good on
17715 and weak on 17795. After Australia switched to frequencies on the
15 MHz band they have been good. Currently listening to them on 15515
and NZ on 13730. The NZ DRM signal on 15720 and the AM signal on 13730
are about the same S6-S9 and Australia is around S9.

I can't say anything good about ccrane
I had one of their top battery chargers and it melted and almost burned down my house and when I emailed to tell them all they did was offer to sell me a new one at full price
no concern over the safety issue involved.

I will never buy from them again

In the student archeology magazine of the U of Pittsburg. I think it was in late 62. If you find a copy, I would like to have one. My only one got lost in moving. All I have is my own draft copy, and many of th ephotographs of Tikal prior to its actual excavation.

Yeah, well talk radio used to be just fine when all they heard was
Limbaugh. Now that there is equal time, the brass doesn't want any talk
radio if there is balance.

868. Re: The Armed Forces Radio Revolution - Changes at the American Forces Network (or AFN) and American Forces Radio and Television Service (AFRTS)

Miso,

"and many were turned off by the strident anti-war
attitudes found on many NPR shows."
- - - This Is Not My Opinion - - -
And I do in-fact Listen to NPR and think for the most
part that it is reasonably balanced.

Here is My Opinion - Often NPR comes across as
being Tilted to the Left. Frequently as I Listen to an
NPR Program the Guest Panel would have three
members - two liberals and one moderate -vice- a
more Balance Panel of a Liberal + a Moderate +
a Conservative. {my opinion ~ RHF}

Think About the Military Service Member
the Target Listener of AFN and AFRTS :
I can see that anyone in the Military who is out-there
actually fighting the War-on-Terror would be sensitive
to anything 'anti-war' and thus anything that was 'anti'
whatever they were personally doing.

Reporting-the-Facts :
What the reporter wrote -one assumes- is what he
heard from Members of the Military In-Country who
'feel' NPR has more positive Anti-War Air Time then
it has Pro-War-on-Terror Air Time. NPR via AFN
and AFRTS should Speak-to-the-Troops and not
Lecture them about the In-Justice of their Service
and the Wrongness of their Fight in the War-on-Terror.

The Role of VOA is "NOT" to be a Propaganda Tool of
the US Government to the American People -but- To Get
America's Message Out to the Peoples of the World .

The Role of AFN & AFTRS "IS" to be a Propaganda Tool
of the US Government to the American Military Services
and to help Maintain and Improve Troop Moral and the
Fighting Readiness of the American Military.

so say i - my opinions stated as facts ~ RHF
.

875. YLE Radio Finland ..shutdown at 31.12.2006

Newsgroup: rec.radio.shortwave
Date: 2006-06-07 09:26:05 UTC
From: Juha Sepp&#65533;l&#65533; <juha.seppal@seppala.net>
Message-ID: <NYwhg.100$Or.18@read3.inet.fi>
Source record: 77657

YLE Radio Finland - www.radiofinland.fi - closing a medium- and shortwave broadcasting systems at Pori shortwave station at 31.12.2006.
No more shortwaveprograms and programms at 963 kHz am-channel after that.

After 1.1.2007 YLE Radio Finland operates only at 558 kHz. This frequency coverages Baltic-states and southern Finland.

juho

882. OT: Will a Sony US Radio work in the UK?

Newsgroup: rec.radio.shortwave
Date: 2006-06-07 10:49:31 UTC
From: michaeld121@hotmail.com
Message-ID: <1149677371.842746.121580@f6g2000cwb.googlegroups.com>
Source record: 77664

(Apologies if this is a bit OT - but it seemed to be the most appropriate place).

I've been looking for a new shower radio and have at last found a Sony radio (ICF-S79V) that's exactly I want. However it's been discontinued in the UK and I can only find it on eBay in the US: http://tinyurl.com/l9ux2

Does anyone know if a radio like this bought in the US will work in the UK?

While it has FM & AM like a UK radio, I'm not sure if the ranges and intervals are the same. I'm not worried about the 'weather' & 'TV' Bands - but it's not worth buying if FM & AM can't get 'standard' UK radio stations (eg Radio 4, R5L R2, XFM etc).

Any advice would be appreciated.

Thanks,

Michael

Join the Yahoo 398 Group.

A replacement speaker can be had for $1 (much better than the stock
speaker in the 398/909). Replacement takes less than 30 mins.

Postings in the 398 Group describe. It's easy. I did it on two 398's.
BIG difference

Hello Michael,

You should check, ask the vendor, wether the frequency step is 9 or 10 kHz in the AM/MW band, or if it is selectable. 9 kHz is the European standard, 10 kHz the US standard.

The FM will be the same (87.5 - 108 MHz) or even larger (like 76 - 108 MHz)

Charly

Sounds strange to me, buy something try it, put it away for a year
and try again and bitches that it does not work? Crane Radio does
not make the Sangean ATS909 they are only the seller? What am I
missing here?

Smart move. Bose products are expensive, promise much, and fail to live up to the promise. Truth is, that Bose products exist to fund Amar Bose' laboratory. That's one reason you don't ever see them on sale, or sold through traditional audio/electronics outlets. And you never see them sold side by side with other audio products.

I, too, found the Wave Radio to be a disappointment. Like Bose' speaker systems.

Bose products are also routinely outperformed by Henry Kloss designs. For about 30% less money.

A few years ago, I bought a Cambridge 88 (from a member of this newsgroup, btw) and it's been in daily use since. Exceptional audio performance for it's package, and AM/FM performance is very good. Many college students use Cambridge 88 and Cambridge 88 CD models as their stereo systems. A practice that's found it's way into many homes, as well.

Cambridge 88 and 88 CD are out of print, though they may be found on eBay from time to time.

Cambridge has a new model, 740, for about $350, that is the spiritual descendent of Cambridge 88. (Actually, after Kloss' death, Cambridge changed the product so as to discontinue royalty payments to the Kloss estate for the 88 design.) 740 is very good. A more cost effective solution, though, is the previous model, 730, for about $200. 730 is

currently available from Cambridge, but may be, or may soon be, out of print.

Reviews on the Cambridge products are quite good.

Actually, no, you see British radio signals in the domestic bands have the oppsite polarity to those over here. This means that your US radio cannot hear them because they arrive at the antenna from the opposite direction to the one you radio is looking for signals. Some have reported that placing a mirror close to antenna will make it possible for the radio to recieve the signals. However different frequencies require different spacing between the mirror and antenna as phasing is critical for clear reception. Reliable reception is only possible by purchasing a radio designed for receiving the right hand polarized British signals.

Hope it helps);-)

So far all I see is a radio that was used once then stored for 9 months then used again and somewhere in the prosess was damaged. Did you try battery and power supply when you first got the radio?

The $37.00 charge sounds like an overnight fedex shipping charge...is that correct?

> After 1 year I again tried the radio with new batteries and guess
> what ? the radio did not work properly, the sound was very distorted

OK, as I understand the information you bought the radio, stored it for 9 months, found it was defective, got a replacement, stored it for a year and found this one to be defective. How long is the warranty on the ATS909. Surely it does not extend beyond 12 months, and we are in the second year if I understand your message.

The procedures and cost for repair are listed on the Crane website. I don't understand why you should be surprised at the cost of repairs.

> I checked the radio out with earphones and the sound was fine
> so I am hedging my bets and packing the radio with a good set of
> headphones.

The radio is out of warranty and the warranty is clearly spelled out in their website. I think you should have checked the radio out throughly and used it to discover any operating problems while it was still in warranty. Plugging it in once and storing for a year is an ineffective way of determining whether a radio is defective or not.

> The FM will be the same (87.5 - 108 MHz) or even larger (like 76 - 108 MHz)

Sort of. FM stations in the U.S. are at ODD 100kHz intervals, e.g.
88.1, 93.3, etc. Outside of the U.S. they are at any 100kHz interval,
e.g. 88.0, 93.7. 101.1, 96.6. Some stations will come in, some won't.
They are also not always exactly on frequency, but U.K. stations
should be.

The pre-emphasis (amount of trebble boost to compensate for the quality of
old radios) is different on FM. Non U.S. FM stations will sound "flat" on
a U.S. radio. It probably won't make a difference unless you have a very good
station (there are very few of them left) and a very good radio.

However the market for radios is different in the U.K. There are stations
on long wave and short wave that you may want to listen to. There are
also many stations on various digital radio systems.

Don't forget that the U.K uses 230 volts, 50 Hz AC. Radios without clocks
that plug into the wall can be used on a transformer, but the cost saving,
if any, of buying them in the U.S. may evaportate after buying a good
transformer.

If I were you, I would buy a battery operated portable radio with analog
(a dial or needle) type tuning. It will work almost anywhere. Once you
have gotten yourself settled, then you can consider what you want to listen
to and buy an appropriate radio if you need to.

Due to a change in the way copyrights are applied, U.K radio stations can
no longer broadcast music over the Internet. There are many stations that
do, so if you plan to get an "always on" broadband connection, you may just
want to listen to them on your computer once you get there.

I saw this after I answered the previous post. You could just get a regular radio and connect a waterproof speaker to it. Or mount a set of computer speakers in a shelf over shower. Keep in mind that a shower radio still has to be opened to replace the batteries and it is likely that after a few times of replacing them it would leak.

Geoff.

Except that a U.S. set will only receive odd-numbered FM frequencies -
93.1, 93.3, 93.5, 93.7, etc... It won't get 93.2, 94.8, etc. Usually
the same switch that gets you 9KHz steps on AM also gives you access to
even-numbered frequencies on FM. Assuming, of course, the set has such
a switch. Sometimes you switch it by holding some other button for a
few seconds. Unfortunately the specs on the Sony website don't offer
any answers.

This set doesn't get LW either. Whatever 252 in Ireland is doing
thesedays (sports?) and, IIRC, Radio 5 Live? on 198.

That is a very good question. There are two issues to consider:

1. Whether the AM portion of the radio can be set to tune in 9khz
tuning steps for use in the UK. I suspect that it can be set that way
because my $20.00 Sony digital clock radio can be set to 9 or 10 khz.

2. This radio will not tune to longwave (LW) signals while many radios
built by Sony for the UK market will tune to that band. If that
reception is important to you then you should buy a radio in the UK.

Overpriced for what it is and I find the audio overemphasizes bass to
the point it loses clarity. It will sell well in gadget filled stores
like Brookstone and Sharper Image.

Simpler radios like the Boston Acoustics, Sangean and Tivoli have
decent sound and do a good job tuning strong stations on FM and AM but
they are not weak signal radios.

For some reason the AM tuners on the little tabletops like those that I tried was just adequate in performance. But that goes with the unfortunate trend in de-emphasizing AM performance in many radios I'm afraid.

Will the frequency be transferred to another operator for a new
station?

Why are they shutting this service down?

When the display went bad in my original AM-FM CCRadio (out of
warranty, made by Sangean), the store paid one way shipping and fixed
the display for $25. I still buy from them.

The CCrane store doesn't manufacture the Sangean radios, but will fix
them for what appears to be the going shop rate. If your radio keeps
crashing, get another brand, for pete's sake,

I listen to WLW and WHO (both include digital), from Maryland, and
there is no noticeable interference; the summation of the link/article,
that I posted, stated that in most cases it wasn't an issue, and
certainly doesn't keep one from AM DXing. If there was interference it
was slight, and in some cases, they weren't sure if it was the digital
part causing the interference, anyway. So this crap, that IBOC will
destroy analog radio, was made out of pure ignorance...

Oh, and how can you "tell". Do you have special equipment, as in the
article, or do you have a baseline, to go by ? How do you even know it
is IBOC causing the interference ? You, and others, keep making
blanket, ignorant statements/assumptions !

I have very special equipment. A Drake R8B and a 50' random wire
transfomer coupled to coaxial cable. I can hear the LAX TIS station
from 35 miles away. I can also hear the Mojave Desert station from
Barstow, some days, close to 100 miles away.

Many thanks for all of the responses. I've already got the analogue Sony mentioned above and while it's given me great service - it's wearing out and also I particularly want something with presets & digital tuning that I can use in the bathroom (to counter my wife's habit of re-tuning it to some lousy music stations). Unfortunately there just isn't anything else on the market for use in a bathroom apart from novelty dolphin or penguin type radios.

I've emailed the supplier to see if they can answer the specific point about tuning intervals. Otherwise I might try emailing Sony US.

Thanks for all of the swift & helpful replies.

Michael.

I have three (count em,three) old Goodwill store radios in my bathroom.I
also have a Goodwill store shower radio (it looks like a Seahorse) but
it doesn't work.I dont reccomend using any radio in the shower where it
might get wet.Water seeks it's on level and someday,that water will find
a way to bust into an inside the shower radio.

I do listen to NPR quite a bit. Actually my "spouting bull into a
tin-horn" wasn't in reference to the NPR shows that are rebroadcast
over AFRTS.

It was more in reference to the conservative windbags like Ol' Rushbo
and Laura Sleazeinger, whose shows are carried on AFRTS. "Honest news"
was a nod to NPR, as a matter of fact. Apoligies if you misread.

> The AFN shortwave sounds very good. As I've mentioned before, the

Hopefully I'll get to hear it soon. Some of the shows I'm looking at
on the run-down sound like stuff I'd like to listen to - and what's
better than to have them all on ONE station? :)

David,

Please take two Aspirins and lay down and Rest.

Why ? - You gave NewsMax as a Source ! :o) ~ RHF

READ - U.S. Military Stations (AFN & AFTRS) around the world
could soon be playing more hip-hop and rock and cutting back on
country music, sports and talk shows.
http://www.newsmax.com/archives/ic/2006/6/5/101045.shtml
The most significant change would be creating Two Music Stations
for World Wide Broadcast. One would feature mostly Hip-Hop, Rap
and Pop Music, and the 'other' would play Classic Rock, Alternative
Bands and a mix of Top 40 Selections.
- - - So are we to conclude that Country Music is to be Out-Lawed ?
Why not have One have One Classic Country Hit and One Top Ten
Country Hit per Hour on the second 'other' Radio Channel ?

Here is a more Detailed Report on the Story
-from- "Stars-and-Stripes" -by- Leo Shane III
http://www.estripes.com/article.asp?section=104&article=36735&archive=true
Future Military Radio Menu could be more Pop,
less Talk - Hip-Hop heavy content recommended
for Stations around the World

Seems like the US Military has two target Listener
Groups : All those 34-Years Old and Under and All
those 34-Years Old and over. Will both groups be
served with programming that Entertains them and
Informs them ?

the more you know - the more you know ~ RHF
.

I've got the Receptor radio.....not the HD one from Boston Acoustics.
With the internal antenna, it is just ok on AM, but when you hook up
something like the Radio Shack loop antenna directly to the external antenna
terminals it comes to life.

I haven't bought anything from them recently, but had no problems in the
past, other than his high shipping charges. He usually did have the
cheapest total cost, by a few bucks..

The Other Side of the Story - The Armed Forces Radio Revolution
- Changes at AFN and AFRTS
http://www.rushlimbaugh.com/home/daily/site_060606/content/america_s_anchorman.guest.html

Rush Limbaugh's Ratings Huge on Armed Forces Radio
-by- Rush Limbaugh
- On-the-Air Radio Program Transcript - Dated - 6 June 2006
http://www.rushlimbaugh.com/home/daily/site_060606/content/america_s_anchorman.guest.html

* Here are the Numbers. In terms of Percentage, the Total
Audience for this Program in Armed Forces Radio is 24.9%
-- 25%! That's a Percentage of everybody in the Military
Listening to this Program. That is huge, folks. That is a
larger Rating than we have in this Country. That is huge.

* In the 18- to 34-year-old group, the percentage is 17.8%,
which is larger than any Radio Program in this Country
has over this Country's Population.

* The 35-plus Demographic is 35.2%.

* These Numbers are just a gnat's eyelash behind NPR.

* Let me tell you what this is really all about. In order of
Listenership on Armed Forces Radio, according to Lund,
is NPR and me -- we're Statistical tied --

* Down here at the very end where you can barely register
any Listenership is "Air America"

* Let me tell you what this is all about. This is all about
getting this Program Off of Armed Forces Radio because
the Liberals that they put on there the last six months
are not registering.

* So they got liberal talk radio on there, and just as in this
Country where nobody is listening to it, nobody in the Armed
Forces is Listening to it, either!

* They've got Audience figures that do not justify continuing
coverage of the Liberal Talk Shows on Armed Forces Radio.

* Armed Forces Radio does four or five hours of NPR all day,
maybe even more.

* Yet in one hour of My Program, we have almost as much
Listenership on the Armed Forces Radio Network as NPR

gets in four, five or six hours.

* AFN can't justify all these pathetic Liberal so-called Radio
Programs

cuhulin@webtv.net wrote:
> Huh!,UK radio stations can no longer broadcast music over the internet?
> Is that true?

They are no longer allowed to broadcast music over the INTERNET to users
OUTSIDE of the U.K.

This started on April 1, and was posted in advance here. There were followup
postings by people claiming it was an early April fool's joke. It was not.

For example,from: http://www.classicfm.com/index.cfm?nodeId=5510&sw=800

classicfm :: overseas listening

Since the 1st April 2006, Classic FM has been required to restrict
access to our Internet Audio Streaming to people who live in the United
Kingdom.

This is happening because of a change in the way we are allowed by the
music industry to stream on the Internet.

New licence terms are changing the way royalties are collected on the
music being broadcast.

Geoff.

Bose is a sweat shop. They mistreat their employees. I have been
warned more than once not to go to work there. There is a cliq there,
a ruling faction of sorts. A bunch of MIT guys with over-inflated
egos. Most of the stuff they produce is just ok. While the bose wave
radio may have an innovative speaker box design - and that point is
certainly debatable, I can't for the life of me understand how Bose
ever thought they were going to get any seperation between the channels
with the speakers right on top of each other. I get equal or maybe even
better sound out AND stereo seperation out of the dang speakers on my
Dell desktop.

Mark Levinson has been making better audio gear than Bose for nearly 30
years - and I don't even think he had a degreed engineer on his staff
when I went to work for him in 79.

Save your money on a Bose junk radio and by a sdr like the winradio 313
and play it through your pc speakers.

And I agree with ya. I wish I still had my AR2ax speakers.

Source record: 77788

Hi,

I'm interested in getting my first short-wave radio. From what I've read, the DE1103 seems to be reasonably priced and has some good reviews. Since I'm new to this, I'd like to double check a few things first.

Would this be a good radio for a beginner?

Can anybody recommend a good place to buy a radio from? I live in Binghamton NY, and I'd prefer to buy in person, but I don't mind buying online.

One thing I'm interested in is listening to the "numbers stations". Will the DE1103 work for this?

Thanks in advance.

David

The Degen DE1103 would be an excellent choice for a beginner SWL. It
will receive signals on all of the HF bands, with no gaps. There are a
couple of Ebay sellers in China that offer them shipped to the US for
about $65.00.

There is usually a group of managers in a business. Even so-called
employee owned businesses hire managers to run the process.

> A bunch of MIT guys with over-inflated
> egos.

Many managers do have degrees in either business, engineersing or both
these days. Pretty much a prerequisite to have a degree. And I would
imagine that some of them graduated from MIT given the location, maybe
others from Cal Tech, and who knows maybe some from Virginia Tech. I
would think that an education would be a plus when it comes to running
the technical and financial details of an electronics business.

Hi All
This is a serious subject in view of the report yesterday on communications, underground to surface.Who remembers a Tommorrows World program about 30yrs ago with James Burk demonstrating a magnetic device communicating about a mile underground at a coal mine, base to surface.The magnetic effect was not affected by the layer of rock between the guy on the surface and the chap underground.I remember being most impressed by this new device heralding a new era of safety in deep mines,Whatever happened to this device. Perhaps James Burk or Raymond Baxter remembers it, or any member of this group.Paul Leslie

In my opinion the Sony is not as good because it does not have a tuning knob. Instead it uses up/down push buttons that in my experience are less convenient to use. Otherwise expect that the performance will be about the same, although the audio quality of sound out the speaker will be somewhat better on and Degen.

I believe the Degen is about $65.00 shipped, compared to about $130.00 plus shipping for the Sony. So the difference is closer to $70.00 for the Degen DE1103. The Kaito badged version of the DE1103 costs more.

A google on "magnetic communications" (without the quotes so hits like
"magnetic induction communications" will be returned) turns up quite a lot
of activity, including wireless headphones. Not shortwave, tho' ;-)

[snip]

Hi David.

As John S has told you, the Degen DE1103 is a great buy and a superb SW portable.
However, according to some users in the *moderated* DE1103 Yahoo Group
(http://groups.yahoo.com/group/de1103/)
there has been a recent quaility control problem with that radio and the Kaito version.
See messages #413, 418 and later, in that group. You can join the group and post
your own inquiries.

Other buyers of newer 1103s have had no problems, and I've had no problems
with my DE1103 purchased in Sept. 2004. So I'm assuming there is just a bad
batch that got through and the QC will fix future production. Except for the posts
in the Yahoo Group mentioning some recent problems I'd tell you not to hesitate
in purchasing one. It gets fantastic SW reception off the built in whip antenna.

Another good choice would be the DE1102. Smaller and not as "rich" sounding as
the 1103, but it does have SSB capability. There is a Yahoo group for that
as well...
http://groups.yahoo.com/group/KAITO-DEGEN1102/

Source record: 77848

John S.,

Haven't found a so-called High End 'Quality' Sound Radio
with a good AM Radio Tuner and I have bought and give
away or returned several to date.
* Tivoli Model One
http://www.universal-radio.com/catalog/spcialty/1969.html
* Sangean Wood Radio - WR1
http://www.universal-radio.com/catalog/spcialty/4394.html
* Bose Wave Radio
http://www.sharperimage.com/us/en/catalog/product/sku__JS314GPH

CURRENTLY - I am using a Cambridge SoundWorks # 740 Radio CD
http://www.jr.com/JRProductPage.process?Product=3656992
* CD Sounds Good
* FM Radio Tuner works OK with an out-side Antenna
* AM Radio Tuner is lousy even with an out-side Antenna
Even down in the SF Bay Area the AM Tuner is a 'pos'

BAD "LOUSY" AM RADIO TUNERS :
At best the all the AM Radio Tuners are poor in my opinion;
while the FM Radio Tuners are usually very good for Local
FM and FM-Stereo Radio reception.

NEED - A Table Top AM / FM Radio with CD Player that :
1 - 'looks nice' and can not be complicated
2 - "Sounds Great"
3 - Has a very Good AM and FM Radio Tuner
For the Kitchen Radio in Twain Harte, CA.

NOTE - These Radios do not 'qualify' {Looks} :
* GE SuperRadio III
http://www.universal-radio.com/catalog/spcialty/0547.html
* CC Radio Plus
http://www.universal-radio.com/catalog/spcialty/4403.html
* Etón S350 DL Deluxe
http://www.universal-radio.com/catalog/portable/0036.html
* Eton E1 AM/FM/SW/XM Radio
http://www.universal-radio.com/catalog/portable/0101.html
* Grundig Satellit 800
http://www.universal-radio.com/catalog/portable/0800.html

whats you opinion as to a good table radio ? ~ RHF
.

Thanks for the responses. It sounds like a good choice.

One more question. I read something about this radio having Chinese
labels. Is it safe to assume that the DE1103's available on ebay have
English labels?

I am aezael and to clarify the problem, I bought the radio for a
special use, IE in case of emergencies. After I checked out the unit
I stored it without batteries in a aluminum case along with other
supplies and a solar battery charger.
I usually remove all outdated supplies once a year and for your
information I also have one of the cheap short wave radios that
use solar,batteries and a crank generator and that one works
fine.

971. I bought a large capacitance hat for my vertical, but the antenna still gets wet when it rains.

Well....preliminary reports on Radio Intel website say it's about as good as the Degen DE 1103.

The MW and FM are excellent, the SW is "about as sensitive as the DE1103 but a little bit noisier".

Wonder if they'll solve those problems after the first run. I was thinking of getting a DE1103, but if this thing turns out to be a bit better, I'll spring more money for one of those (especially with it having the bigger speaker and all).

David,

Yes - I am using a Cambridge SoundWorks # 740 Radio CD
http://www.jr.com/JRProductPage.process?Product=3656992
up here 'around-the-hill from Twain Harte,CA where
both AM and FM Radio reception is challenging :
* CD Sounds Good
* FM Radio Tuner works OK with an out-side Antenna
but has it limits.
* AM Radio Tuner is lousy - even with an out-side Antenna
Note - Even down in the SF Bay Area the AM Tuner is a 'pos'.

Still have not found a way of getting an External AM/MW
Antenna to work well with the CSW # 749.
- - - Any Suggestions on the right-combo of AM/MW
Antenna for the Cambridge SoundWorks # 740 Radio ?

Ideally - a Large Loop Antenna mounted Out-Side that
was the equilvelent of the the little Loop Antenna that
comes with eth CSW # 740 would be just perfect.
- - - A "No-Tune" Broad-Band AM/MW Loop Antenna
good for the entire AM/MW Radio Band.
- - - Any Suggestions ?

but so far the csw # 740 is the best
of a poor field of choices ~ RHF
.
.

I know what you mean about the educational click. Some places are like
that. Out here it's Cal Tech. Some people are snobs about different
things.

MIT is one of the better institutions but when you have a collection of
guys with the same education you can't expect something different out
of them. They think inside the box.

Liypn may have made a typo with the dimensions shown at eBay.

From http://www.radiointel.com
(about half way down the page)

More Details On The New Redsun RP2000
Thanks to OWL we learn some more details about the Redsun RP2000
*** Size: 290mm x 180mm x 70mm (or in inches 11.4" x 7.1" x 2.76") Which is similar to S350/S350DL
*** Power: 220V AC/ 6-9v DC/ 4 x R20 (D size battery) / 4 x R6 (AA size battery), with built in
re-charging circuit.
*** Other features: dual timer, stereo/momo headphone switch, fast/slow/lock tuning knob, backlit
LCD (on or 8 seconds) backlit keys (like DE1103) with beep prompt function.

Yes. Mine came with a nice printed English language manual.
There are also English .pdf versions of the manual.

Hmmm.
I may have spoken too soon. I can't find a printed manual for my DE1103.
I've either misplaced it or was mistaken in thinking it came with one.
My DE1102 has the English manual sitting right beside it, but I'll be darned if
I can find factory manual for the 1103. It's not even in the original box the
radio came in, and that is where I'd have put it if not using it.
However, I do have copies of the DE1103 .pdf Liypn sent me and ones I've downloaded
from the Yahoo group.

That's radio abuse. Receivers don't like to be ignored.
Transmitters, on the other hand, want to be left alone.

A7s were never touted as particularly good sounding speakers. Their
main selling point was the ability to fill an auditorium with 12 Watts
of amplifier.

The problem with this joke is that the wrench exhists. Handedness in a
wrench is determined by which thumb closes the jaws. Right thumb right
hand wrench, left thumb left handed wrench.

I have a left handed crescent type wrench. Where was it made?
POLAND of course.

Wrench available for inspection.

Source record: 77880

I live in a small town north of Youngstown. I have a Sangean 505 (has sideband) also a 622 Sangean (just receivers, no transceivers -- yet). The reception with the built in antenna isn't very good. I want to erect some sort of wire loop antenna, but don't know what kind of wire, what sort of grounding, length, etc. to use. I mainly want to listen to shortwave broadcasts like VOA, BBC, but also private hams on the sideband. I can buy someone dinner (and pay for all materials), if they help me out erecting an antenna. I went to Radio Shack but they were ignorant about shortwave stuff.

Thanks,
Justin

I love my Sangean 909! I bought the Radio Labs version of it, and
haven't been disappointed in the slightest! I've also read that the
Degen 1103 is a winner - have been wanting to buy one myself just to
try it out. Someone previously mentioned the Degen/Kaito 1102...
awesome little radio, I've got one - great sound for such a small unit,
but the ssb is hard to use given the memory channel set up. I'd also
look at the new Eton E5. I don't know much about it but it sounds
good!

At 23, I took a job as a young engineer at a place that had previously been
a gyroscope manufacturer. As the new guy, they asked my to deliver a
briefcase to the boss' office and (you guessed it) there was a spinning gryo
in the briefcase. I got a big surprise when I tried to turn a corner in the
corrider and the briefcase kept going straight ahead! A great 'new guy'
trick.

I worked in a shoe store as a teenager.

The newbies were instructed to get the wall-stretcher from the backroom
when there were too many shoes to put up.

The FM side will work just fine. AM is a potential problem. if the
Radio is digitally tuned on AM, you may be in for a tough time.
The channel interval in the USA is 10 Khz, outside North America it is
9 Khz. So a digitally tuned radio in the USA would go 550,560,570,580
590, 600. In the UK it would be 550,559,568,577,586,595,604....

Some radio have a set up option, or a switch so you can change back
and forth between 9 and 10 Khz channel spacing.

I have a good signal on Australia 12080, 13670, 15240, and 15515 but no sign of RNZ on 13730 at 04:15 UTC. They must be having more transmitter trouble.

Loop antennas don't need a ground. You can use any kind of wire for an
unshielded loop. Use at least 50 feet of wire in the loop. The radio
takes a 3.5 mm plug. Attach one end of the loop to the barrel and other
loop end to the tip of the plug. You can tack a small diameter wire like
this from radio shack.
<http://www.radioshack.com/product/index.jsp?productId=2036277&cp=&origkw
=magnet+wire&kw=magnet+wire&parentPage=search>

Keep the wires apart until they reach the plug. If you want the radio to
be a distance from the antenna use coax between the radio and antenna.

matt weber wrote:
> The FM side will work just fine.

Not necessarily. European countries use even FM frequencies (88.8, 93.2, 95.6, etc.) as well as the odd frequencies like 93.7, 99.3, 101.5. Some countries (maybe not in Europe, maybe only in Africa?) even use half-splits like 100.75.

In North America, only the odd frequencies are used and most digitally-tuned FM radios can't get the even ones.

Where a 9/10KHz switch for AM exists, that switch usually also enables even FM frequencies.

It should also be noted that American radios don't cover longwave.

Never did hear them on 13730 this evening but I have them on 9615 at
05:50 UTC.

M II - Yes - By the Grace of God
I Am An America - Amen ! :o) ~ RHF

Should have read :
Consider the Word : Photograph [no 's']
Starts with a "Ph" and Ends with a "ph"
Shorthand for Photograph 'Ph2' {Ph2}

But then if you check your post - you will see
that some how an 'I' was inserted into the
word "Photographs" to read "PhotogrIaph"
> Shorthand for PhotogrIaphs 'Ph2' {Ph2}
Were my original Message Read
> Shorthand for Photographs 'Ph2' {Ph2}

Now Just How Did "I" Do That ?

mysterys and miricles - they do happen ~ RHF

Howdy! I hope the 88 is still living up to its reputation, I'm the one
that sold you that radio, with one side not playing? :) I have my own
in my bedroom and boy, does it ROCK.

I honestly think the Bose can't hold a candle to it... with seperate L
and R channels and a dedicated subwoofer, it just amazes me every time
I play it. The iPod+Kloss 88 is a match made in heaven.

Good to hear you liked the 88, Mr. Maus!

1014. Boere Declare Sovereignty in South Africa

Newsgroup: rec.radio.shortwave
Date: 2006-06-08 08:16:30 UTC
From: NewsGuy <NewsGuy2005@gmail.com>
Message-ID: <1149754590.561914.19180@j55g2000cwa.googlegroups.com>
Source record: 77896

History is underway in South Africa once again, as the Boere, an indigenous white ethnic nation in its own right, declare their sovereignty and push for a separate homeland within the country that saw blacks legally disband the Apartheid system some 10 years ago.

Dr. Lets Pretorius, Spokesman for the Boer nation (Boerevolk), and Mr. Riaan Smith, an attorney, met with met with Adv. Cetswayo and Mr. LH Mapholaba from the office of the Speaker of the South African Parliament on May 25th to discuss The Majuba Declaration, the Boervolk's formal demand for an independent homeland. The Cape Town meeting was organized by The Boerevolk Freedom Foundation, which is driving the push for self-determination.

The following statements were put forward during the meeting:

1. The Boerevolk is a definite entity and must be recognized as such.

2. There is a distinct difference between a Boer and an Afrikaner.

3. The Majuba Declaration is legally sound, based on section 235 of the Constitution of South Africa.

Mr. Smith and Dr. Pretorius then demanded that:

1. The Boerevolk Freedom Foundation, and the Boerevolk be institutionally recognized. The Foundation will be the formal mouthpiece of the Boerevolk until the election of representatives or deputies of the Boerevolk has been held.

2. A forum be created to discuss related matters and demands of the Boerevolk.

It was agreed that this forum will be held by the end of June, and will consist of delegations from both Parliament and the Boerevolk. The Parliamentary delegation will include the Chairman of the Constitutional Committee; the Minister of Agriculture of Land and Environmental Affairs, to address the Zimbabwe-like land grab currently taking place in South Africa; the Minister of Justice, to address the injustices against the Boerevolk taking place in South Africa's legal system; Minister of Safety and Security, to address the murders of farmers, and Black-on-Boere crime taking place.

The Chairman of Human Rights of Minorities at the United Nations, Mr.Stauffenhagen, has also received the Majuba Declaration.

For the first time in more than 100 years, the Boerevolk are actually being represented in South Africa. After 1902, they lost their freedom and were incorporated into the Afrikaner group and later into "White"

South Africa under the Apartheid system.

For further information about the Boerevolk, please contact Henry Pinkham at
henry@taalring.com, telephone +2712 332 4500. South African time is seven hours ahead of EST.

Listen to The Right Perspective, heard live every Friday 10pm EST over shortwave WWCR 3.215 MHz and the Internet at
www.therightperspective.com, for "Hello, Africa!," the official radio show of the Boerevolk.

1017. Looking for an indoor antenna for my Satellit 800

Newsgroup: rec.radio.shortwave
Date: 2006-06-08 11:09:01 UTC
From: JazzyJeff <seale.j@gmail.com>

Source record: 77799

MFJ's 1022 looks to be the least expensive and easiest to use, but is it the right one for use with the Sat800? I've also looked at some offerings from Palstar and Vectronics that look pretty nice. Universal Radio wants $54.95 for the 1022, $79.95 for MFJ's 1020C, $99.95 for the Palstar AA30 and $89.95 for the Vectronics AT-100. The MFJ 1020C and the Vectronics AT-100 look almost alike. What makes the 1020C cost more?

No.
I know a fellow who works in Tech support for a big computer company
who says they get questions likes this all the time.

There are several reasons the product has failed to meet your
expectations.
1- you have likely installed it upside down.
2- Your antenna is defective, the product is not meant to be used with
a defective antenna.
3- Exposure to weather has nullified your warranty.
4- There is an improved replacement product available and you may wish
to upgrade at a special price.

Hey, Adam.

Yes, I remember. And, as I recall, the fix was something as simple as
a piece of shielding that had touched the circuit board. Or it may have
been a cold solder joint. I've slept since then. But it was the kind of
fix that I accomplished within 5 minutes of the radio's arrival, and it
hasn't so much as hiccupped since.

It runs 18 hours a day, every day. Without fail.

I remember the first time I heard 901s. The salesman had them sitting
on top of speakers that had to be 6 feet high and 4 feet wide. He kept
switching between those and the 901s. You couldn't tell the
difference.

Hard to believe Henry could outdo them with a little 8-inch woofer and
1.5 inch tweeter, but times move on...

I have the 901 IV speakers -- don't see any obvious way to take them
apart; no screws or anything, so it's hard to say.

>
>http://www.partsexpress.com/pe/showdetl.cfm?&DID=7&Partnumber=260-910

Did a Google; there does seem to be a cottage industry of folks
supplying new surrounds for Bose 901s. Maybe I'll look into it.

Or send the new guy in engineering to supply for a pressurized
container of Dihydrogen Monoxide.

Or send the new finance guy to get the difference finder.

The only advantages you can get from the Sony SW7600GR compared to the Degen
DE1103 are :
- build quality (I suppose !)
- sync detector on AM

Charly

You may want to check out http://ussliberty.org/ and check out what happened to the USS Liberty on this anniversary of that event!

Could this be why they allegedly "killed" the "terrorist" today? It would give us something ELSE to look at and the media something ELSE to talk about all day so they'd have an excuse for not having to talk about the USS Liberty. Just a thought! Some people think it is "file footage" and doesn't look at all like it should for such an "important" event as they claim to have accomplished this a.m. (? 06:00 Bagdad time ?) Oh! It also might help Dubya's approval rating and give some folks the warm fuzzies concerning why we are in Iraq in the first place - especially if they happen to have lost a loved one or two in this "police action!"

Check it out and find out what a wonderful "friend" we have in the middle east!

Or 30 feet of wire run around the perimeter of a window or around the
floor. And in my experience most portables perform very will with the
built-in whip antenna. Raising the level of all signals with an
amplified antenna won't magically draw weak signals from the mud. An
amplified antenna with several knobs to twirl will provide
entertainment for the otherwise bored swl.

''Conclusion...

A funny thing happened as I was winding down this review. During an
afternoon I was taking photographs of the Model Six along with three
other pairs of loudspeakers I have here for review. Between the
confusion, the components and stands moved around and so onï¿½ I really
didnï¿½t pay attention to which loudspeakers that I placed on the
speaker stands when I was finished. That evening in a darkened room
I turned on the system, pressed "play" on the CD player and really
enjoyed the music. The loudspeakers in use were none other than the
Model Sixes! Now I could have swapped them with a pair of outstanding
$900, $1,000 or even $1,800 loudspeakers which I have on hand ï¿½ but I
didnï¿½t!''

Yep,(in my opinion) Bose wave radios are,Too Much Money For The Amount Of Bread.
A lousy AM/FM (some have CD players) radio with a zigzag cardboard (or whatever it is made of) tube connected to the speakers for great sound,but that (in my opinion) is all they are good for.I have a cheap windup childs record player/phonograph here which dates back to the 1940's (yep,I bought it years and years ago at a thrift store for two or three dollars) and it has a zigzag cardboard tube for the speaker.Even at half the price,I still wouldn't buy a Bose wave radio,not with such a lousy AM/FM tuner,I wouldn't.

Source record: 77828

Hello.

The people who replied and suggested that you string 30 feet (or more) of insulated wire around your room(s) are absolutely correct. This will outperform any of the antennas you mention below IF your house/location is relatively electrically noise-free. (You may want to turn off computers, fluorescent bulbs, etc.) If you can hang such an antenna out of a window (even on an as-used basis) without having the wire touch the ground, this would be even better.

I have found, through experience, that inexpensive active antennas are just no good (with the possible exception of the MFJ 1020C when it's used as a preselector with a random length outdoor wire - NOT as an active antenna, but that mode of operation evidently won't do for you). I have read that the AOR LA-380 indoor active antenna is a fairly good one; that costs about $400.00. The sadly-discontinued AOR WL500 Window Loop Antenna ($200.00) is also a very good indoor antenna and works exceptionally well with the Satellit 800. The very BEST indoor active antenna is, of course, the Wellbrook ALA 330S (or the '1530 if you are more interested in MW DXing). However, this is quite expensive and complicated to install; it is, however, the easiest of all active antennas to actually use. (All that is necessary is to have it mounted on a TV rotator. Then you merely change the antenna's orientation depending on the direction of the signal you want to hear. There is nothing else to adjust.) I have two of them, both mounted in my attic. One of my Wellbrooks is used with my Satellit 800 and the other is used with my AOR AR7030 Plus. (You cannot mount one of these antennas in your room unless you are a single person or have a VERY understanding significant-other!)

Please remember that you cannot "cheap-out" on an antenna, even a random-length outdoor wire. With that kind, the least expensive antenna there is, you need a balun, a lightning/surge suppressor, and various other items. With indoor antennas, the expense climbs. There is no way around it.

Finally, you must consider this fact: the ANTENNA is FAR more important to good reception than is the RECEIVER! The best radio in the world is of no use whatsoever if coupled to an inferior antenna. Indoor antennas, working in a relatively hostile radio environment, must have exceptionally good design and manufacture in order to fuinction in a manner satisfactory to DXers. That costs money.

Other than an outdoor random-length wire (or a wire hung about your room), you CANNOT buy an antenna that's any good at the prices you mention.

If you cannot afford better at this time, and the 30 feet or so of wire strung around your house is unsatisfactory, do NOT waste your money on one of the cheap-type antennas you mention (or some other "miracle" antenna you see on eBay or other dealer), but use your Grundig's whip and SAVE your money until you can afford a proper indoor active antenna.

Best of luck.

Joe

Down and dirty, get about 100 feet of insulated wire from the hardware
store, attach it to your radio's external antenna terminal, run the
wire out your window, string it around the yard as high as you can,
don't run it over or under any high-power electricity lines. This will
work pretty much as well as more complicated stuff.

> - sync detector on AM
>

I think for my purposes the DE1103 was the right choice. This will be my first attempt at SWL, and although I expect to continue in it, I like to keep the cost down until I know for sure.

I'm not too concerned about the manual. I stumbled across the English pdf when I was reading the reviews earlier. If I don't get a manual with it (I think its supposed to come with one) I'll download it.

I have a couple of off-topic questions... How far away can I expect to receive with this? I'd like to pick up Russian broadcasts. That's not my primary reason for getting it, but it would be nice.

Also, do people still ask for and receive QSLs? I picked up a library book about short-wave radio and according to that, getting QSLs is a fairly common practice. The book was a little old (printed in the early 90's), so I'm not sure if that's still done.

Thanks.

David

I have an old computer in the kitchen that I use to listen to the BBC.
All the BBC music programs come through without interruption, My ISP
is a Canadian (Bell) company which might make a difference but it seems
that not everone is denied BBC music. I haven't checked all the BBC
channels however. I listen mostly to BBC2 and the news.
While the news can be received using WinMedia, all the rest of the BBC
programs require RealPlayer. Try it out. <bbc.co.uk> .The quality and
variety of the commercil-free programs is well worth the bother. I just
finished listening to a Loretta Lynn program on BBC2 in stereo at 28
kbs. No clicks, pops or dropouts. Impressive technology.

1052. Re: Looking for an Indoor Antenna for my Grundig Satellit 800 Radio

Newsgroup: rec.radio.shortwave
Date: 2006-06-08 20:47:43 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149799662.932993.67420@f6g2000cwb.googlegroups.com>
Source record: 77834

JJ,

The Grundig Satellit 800 already has a built-in Pre-Amplifier
that is used with the built-in "Mega Size" Whip Antenna.
{ The Built-in Whip Antenna is an Active Antenna.]

The Grundig Satellit 800's Whip Antenna is a design for an
earlier age of radio when Whip Antennas were Designed and
Engineered to be real Signal Gatherers: Large and Long and
Thick at the base and tapering to the tip. The majority of
today's 'portable' AM / FM Shortwave Radios have short and thin
Whip Antennas; which provide minimum Signal Gathering. The
Grundig Satellit 800's Whip Antenna is "Mega Sized" when
compared to the average much smaller Whip Antennas on most
of today's smaller 'portable' AM / FM Shortwave Radios. Plus
with the Grundig Satellit 800's you have the built-in Whip Antenna
Pre-Amplifier for add Signal Strength.

IMHO: The Size and Shape of the Grundig Satellit 800's built-in
Whip Antenna is about the Signal Gathering equivalent of one of
those 23 Feet Reel {Role-Up} Antennas that are required by most
other 'portable' AM / FM Shortwave Radios to get the same Signals
that the Grundig Satellit 800's provides with the "Mega Size" Whip
Antenna and built-in Pre-Amplifier.

QUESTION - So Why Use 'another' In-Door Active Antenna ?
When your already have "Mega Size" Whip Antenna and a
Pre-Ampliers built-in to the Grundig Satellit 800 Radio ?

First - Check-Out the Grundig Satellit 800 Millennium Group on YAHOO !
SATELLIT 800 => http://groups.yahoo.com/group/Satellit800/

Second - Read any and all of these Messages about
using Antennas with the Grundig Satellit 800 Millennium.

* Concerning the Grundig Satellit 800 Millennium's
"Mega Size" Whip Antenna with Pre-Amplifier for
Shortwave Listening. READ "GS800M's Whip Antenna"

What good's a hat if it don't keep the antenna dry? I think I'll keep it
though, for some odd reason my SWR's are better.

I didn't even think the BOSE were really still around. They seem to be
the in - thing like in the late 80's and 90's. Maybe that's just when
they did heavier advertising. Never bought into that concept -- didn't
see how little dinky speakers that close to each other could ever
complete with nicely sized speakers set apart strategically in a room
design. I suppose as an office set up in someone's cubicle or maybe in
a kitchen where space was limited they might be ok. Always kind of
thought of them as portable radios - a.k.a. transitor type we used to
take to the beach. Guess lots of people still have them around - but
what's the point if you have to jimmy rig them with other speakers,
etc??

Yes, you can bet the Isrealis knew exactly who the Liberty was, but I haven't heard one plausable reason to explain their motives. Maybe they were just getting a little bored with the arabs and needed to blow off some more steam.

As far as Bush timing the death of Zarqawi to cover up something that happened in 1967 -- one wild stretch. Don't you remember that he nearly caught Saddam in a bomb attack but he had left 15mins earlier?? Bush is going to act on the intel he has and not wait around for some political timing consequences. Anyway, people just don't do a heck of a lot of talking (or listening) these days concerning the Liberty. A very interesting as well as very sad piece of history. Likewise the USS Indianapolis story, USS Cole story, USS Iowa, USS Whipple.......

Anyway that's all water under the bridge. When Armegeddon arrives us Americans will be standing shoulder to shoulder with them Jews against the Muslims. I Know because I heard John Hagee say so this very afternoon. All us Jew lovin Christians are meeting down in DC on 18th-20th of July. Be there or be square.

That's not an example. That's a restatement of the same charge.

2 weeks ago the Bush wash mocking Al Zaquari for being unable to the
bolt on a rifle, saying he was a major pussy. Now they say his
capture has major strategic value.

I think the truth is somewhere in between. I think the guy is the
Shoe Bomber except he has a 3 figure IQ. But, please, this will make
absolutely no difference to the Insurgency and will only embolden the
foreigners who come to Iraq to kill Americans for fun and the Prophet.

Thanks for the info.. Any particular guage of wire? Also, could I buy
some sort of connector to be able to plug the wire into the antenna jack
on the 505 Sangean? Or should I just use an alligator clip?

Thanks,
Justin

Body handling: HTML body converted to readable text

Verstaldin wrote:

> What part of the topic at hand does your comment refer to ?

Hi. Not part of the topic but the type of posting. The message was posted, probably by accident, in the same format as a web page is made in. Traditionally, newsgroups and Usenet have used plain text (ASCII) instead of Hyper Text Markup Language (HTML) for the postings. The HTML format shows up as garbage on real newsgroup agents (readers).

Your HTML posting shows up as the following. There are no such problems with plain text.

==========

```
You don't need more than 30 to 50 feet of wire; simply connect to =
your=20
antenna input if there is one, or connect to the included antenna with =
an=20
alligator clip.For a ground, connect the same kind of wire to =
a metal cold=20
water pipe, or if possible, push a coat hanger intot he ground to about =
a foot=20
of the end, and scrape a spot bare, and attach your ground wire and =
attach the=20
other end to a ground terminal on your radio if there is one. As =
for wire,=20
multistrand insulated wire is fine. I say multistrand insulated so it it =
is=20
strong and so it is somewhat protected from the elements and from =
contact with=20
power lines etc. If you can sling it into a tree or other high =
projection, that=20
will help. In most cases you won't need more than 30 to 50 feet - for =
stations=20
like BBC, BBC, Radio France, Brazil, Radio Nederland or Radio Deutsche =
Well you=20
should have no difficulty receiving them unless listening conditions get =
very=20
poor. We are in a period of few sunspots which means signals don't =
travel well=20
because the upper atmosphere is not made very reflective, so you may =
encounter=20
periods when reception is rather poor. But on the east coast, you should =
have=20
```

better reception than we do here in the Seattle are. Happy Listening ! I =
hope=20
that helps. mm

This looks about the same size as a Tecsun PL-550, but bigger in depth. No doubt to make room for the tuning mechanism and the D cell batteries. Is it double conversion, and does it have SSB support? If not, it's probably a PL-550 inside.

1085. Cambridge SoundWorks # 740 Radio - Loop Antenna Up-Sizing ?

Newsgroup: rec.radio.shortwave
Date: 2006-06-09 05:25:33 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149830733.090483.17720@h76g2000cwa.googlegroups.com>
Source record: 77967

Blitz,

Ideally - I should be able to take the little Loop Antenna
that came with the Cambridge SoundWorks # 740 Radio
and Up-Size It + Plus Relocate It to and Out-Side Location
and there-by improve my overall AM/MW Radio Reception.

1 - Same Impedance at the Antenna Input Jack from the
larger Loop Antenna as the smaller {Factory} Loop Antenna.
[Not Tune AM/MW/BCB Wide Band Loop Antenna.]

2 - Larger Loop Diameter {Larger Signal Capture Area}
and Few Turns in the Loop itself.

3 - Out-Side Location Stronger RF Signals and less Man
Made Noise then in-doors.

QUESTION - Does anyone with some simple practical ideas
for Loop Antenna Up-Sizing to help fix my problem ?

i still have not hit on the right combination -so-far- ~ RHF
.
.

Country music only got two hours a week airtime in 1973/1974 on the Alaskan Forces Radio Network, early sunday mornings on the Ft. Greely station where I worked. It was a network feed, and what little local airtime we were allowed replaced a network feed of rock with local rock. :(

< Snip >

Yes. I've posted it many times. Cheap and easy to make with items from
Radio Shack and other places. You can make it out of magnet wire or coax
cable. Do you want a less sensitive shielded antenna or higher gain? As
long as you don't have aluminum siding you can use an exterior wall on
the inside.

Some radios with clocks switch depending on the time zone you set it
to, so there is no physical switch for manual operation.

1091. The Right Perspective - Tonight 10pm EST

Newsgroup: rec.radio.shortwave
Date: 2006-06-09 07:31:35 UTC
From: NewsGuy <NewsGuy2005@gmail.com>
Message-ID: <1149838295.838944.133420@i39g2000cwa.googlegroups.com>
Source record: 77973

"The Right Perspective," with Frank from Queens and John of Staten Island, airs tonight 10pm EST over shortwave WWCR 3.215 Mhz and over the Internet at www.therightperspective.com

Dubbed "New York's Most Dangerous Callers to Talk Radio" by no other than Bill Clintion himself, Frank and John never fail to deliver explosive conservative talk radio in a style that had listeners calling into shows such as Bob Grant to ask if they had been on the air yet.

Frank delievers assailing commentary on explosive issues of the day such as illegal immigration, historical revisionism and the rise of Socialism, with brash commentary and unapologetic solutions culled from a life experience, decades of following and debating politcs, and his degrees in History. John, a decorated Vietnam Vet, is a walking encyclopedia of facts and figures that he uses to combat the decay of our society. One part of their show, "Hello, Africa!," developed from a segment into a full-fledged show-within-a-show, where they shed light on the Dark Continent and have interviewed such controversial guests as Dr. Lets Pretorious, Eugene Terreblanche and Henry Pinkham.

Frank and John's unapologetic stance means you will never find them fence sitting or making nice-nice with Leftist Poverty Pimps the way Bill O'Riley does with Al Sharpton. Many of Frank's key points and phrases wind up being echoed the following weeks on such shows as Sean Hannity, Michael Savage, and even Rush Limbaugh.

Hear what the other conservative talk radio hosts will be saying next week tonight at 10pm EST at www.therightperspective.com

Great minds think alike. I think I sold it to you for the cost I paid
for it, which was $100 or less, I ended up getting another one for the
same cost so we both got KILLER deals on a Model 88 for the time -
heck, even now, $50 to $100 is a great deal!

Currently, we get (C)rap and gar(b)age bands on our AFN-Korea FM (Eagle FM)
outlets. We also get (as of today, who knows later on) on the AM (Thunder
AM) outlets:

5-7 AM All Things Considered (NPR)
7AM- Noon Oldies
Noon- 1PM News hour (AF News, network news, Paul Harvey, etc.)
1-2 PM Dr. Laura
2-4 PM Country
4-6 PM Oldies
6-7 PM Sports Overnight America
7-8 PM Rush Limbaugh
8-9 PM Ed Schultz
9-12 PM NPR
12-5 AM Who knows... I'm asleep...

12, 14 or 16 guage would be the most common at the hardware store. Any
would work; the 12 guage is the biggest and most noticeable, if that's
a factor.

I'm not familiar with the connections on the back of a Sangean 505,
but if you took the radio to a place like Radio Shack they could
probably outfit you with a connector that fits; one that doesn't need
soldering would be easiest to work with.

Bob

The Idea was Show "The Arab World" we can Kick Ass..

" We" were going into Iraq, complete with " Shock and Awe" bombing,

do a regime Change, " confiscate the WMD's " then be out in 6 weeks..

- Didn't quite work out that way;

Any bets how long we'll be in Iraq

?

talk radio is generally garbage or entertainment. i hope RHF isn't a Hannity fan.

there are exceptions. PRI / NPR and BBC are decent.

Small (24?) guage doorbell wire should work fine, and be a whole lot
cheaper. (And if you get a color that matches the surroundings, it
"disappears").

1110. Saudi Cleric says "Do not watch World Cup Soccer"

Newsgroup: rec.radio.shortwave
Date: 2006-06-09 15:48:11 UTC
From: Rodney <nocrackersplease@cheezewhizzfence.com>
Message-ID: <f1bb6$44899829$d1cc592f$8108@snip.allthenewsgroups.com>
Source record: 77991

Saudi cleric Nasser bin Sliman Al-Omar explains
why watching The World Cup Soccer Match
may cause you to be condemned to eternal torment.

(Courtesy MEMRI TV.)
http://www.memritv.org/search.asp?ACT=S9&P1=1162

Nasser bin Sliman Al-Omar: With regard to the
World Cup... Let me ask you, brother Muhammad...
May Allah protect your daughter and sons, but
imagine that you are about to undergo a surgical
operation, and they tell you the doctor is late
because he is watching the game. How would you feel?

Interviewer: Undoubtedly, very bad.

Nasser bin Sliman Al-Omar: OK, imagine that
while paying a condolence call, one of the people
gets up and turns on the TV to watch the
game, and he begins to clap his hands?

Interviewer: No doubt, this is bad.

Nasser bin Sliman Al-Omar: Our brothers are
being killed in all corners of the world (by Crusaders
and Jews), and yet we sit down to watch the World Cup?

[...] ???

You know how our sons used to admire one of
the great players. You know how our sons used
to admire him. He came as a guest to a certain
Saudi city. He was hosted by one of the soccer clubs.
They imitated him in everything, including his earring.
Someone asked a young man: "Why are you wearing
an earring?" He answered: "Because that player
wears one." He said to him: "But he wears it on his
left ear," so the young man moved it to his left ear.
Do you know what became of this player? He became
a drug addict, despite being an international player, and
he began to visit the so-called Wailing Wall in Israel.
This is the man admired by our sons, I'm sad to say.

[...] ???

During the last World Cup, while the call for
prayer was being aired on TV... the TV that

was broadcasting the game announced: "We will
now broadcast the call for prayer." The ball was
really close to the goal at that moment, and one
guy got up and cursed the muazzin.

[...] ??!!??!!

I am saying to the fathers, to the mothers, and to
the people who watch these games: On Judgment
Day, a page in the book will be opened for you,
and it will say that you sat and watched the games.
Will this make you happy or miserable?
Will this make you happy on Judgment Day, when
you face Allah, or will you wish you had never watched these games?

---------- end -------------

WHAT IS REALLY F-N SCARY FOLKS IS THAT THIS RAGHEAD CLERIC
TALKS ABOUT SPORTS JUST LIKE OUR OWN 'CHRISTIAN CLERICS' HERE
IN AMERIKKKA RAIL AGAINST FOOTBALL AND BASEBALL ON SUNDAY...

I AM SO FREAKIN GLAD THAT I AM AN AGNOSTIC .

I GET TO EAT MY CAKE AND SHOVE IT AS I LIKE ALSO WHILE
WATCHING BASEBALL ON ONE TV AND PAT ROBERTSON
PRAYING ON THE OTHER ..... (grin)

12-5 AM is when they aired the country music, on Sunday mornings,
followed by a bunch of different special interest programing in half
hour or hour blocks, till they went back to Rock around noon.

Yeah, and I've had these two left handed pipe wrenches around for
years. This southpaw found them indispensable on galvanized, but can't
seem to get them to work on copper pipe.

"The Right Perspective," with Frank from Queens and John of Staten Island, airs tonight 10pm EST over shortwave WWCR 3.215 Mhz and over the Internet at www.therightperspective.com

Dubbed "New York's Most Dangerous Callers to Talk Radio" by no other than Bill Clintion himself, Frank and John never fail to deliver explosive conservative talk radio in a style that had listeners calling into shows such as Bob Grant to ask if they had been on the air yet.

Frank delievers assailing commentary on explosive issues of the day such as illegal immigration, historical revisionism and the rise of Socialism, with brash commentary and unapologetic solutions culled from a life experience, decades of following and debating politcs, and his degrees in History. John, a decorated Vietnam Vet, is a walking encyclopedia of facts and figures that he uses to combat the decay of our society. One part of their show, "Hello, Africa!," developed from a segment into a full-fledged show-within-a-show, where they shed light on the Dark Continent and have interviewed such controversial guests as Dr. Lets Pretorious, Eugene Terreblanche and Henry Pinkham.

Frank and John's unapologetic stance means you will never find them fence sitting or making nice-nice with Leftist Poverty Pimps the way Bill O'Riley does with Al Sharpton. Many of Frank's key points and phrases wind up being echoed the following weeks on such shows as Sean Hannity, Michael Savage, and even Rush Limbaugh.

Hear what the other conservative talk radio hosts will be saying next week tonight at 10pm EST at www.therightperspective.com

As NBC News reported back in 2004, U.S. military planners drew up plans to take out Zarqawi three times in 2002 and 2003, but the Bush administration killed the plans each time. Why? Because, military officials told NBC, the Bush administration feared that destroying Zarqawi's terrorist camp in Iraq "could undercut its case for war against Saddam."

Sounds like a "yes" ... which would jive with what I've been hearing on Chuck Harder's show this week ... for example, today, I'm hearing Dr. Pat Choate on Harder's show ... Pat Choate said that the Dow Jones Industrial Average is "in the mid-11,000's" ... oops, at last reading, the DJIA was at 10,989 ...
Sorry, cuhilin ... now who are you gonna support now?

Source record: 77922

Bob [K5QWG],

External Antenna Input for most 'portable' AM / FM Shortwave Radios
with 1/8" Mono Jack
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/10074?l=1

Most Sangean 'portable' AM / FM Shortwave Radios
simply use a 1/8" Mono Jack for the External Antenna
Input. As do many 'portable' AM / FM Shortwave Radios.
* Barrel Circuit-Board-Ground (RF Signal Ground)
* Tip Antenna RF Signal Input

However, the Sangean ATS-909 'portable' AM / FM
Shortwave Radio uses a 1/8" Stereo Jack for the External
Antenna Input.
* Barrel Circuit-Board-Ground (RF Signal Ground)
* Tip Shortwave Antenna RF Signal Input
* Middle-Ring AM/MW Antenna RF Signal Input

Caution - Do Not - Plug your External Antenna into the
Headphone / External Speaker Jack (1/8') -and- Do Not -
Plug your Headphone / External Speaker into the External
Antenna Jack (1/8") - It's easy to do sometimes and
strangly the Radio does not work to well.
- - - Oops - Been There - Done That ! :o)

Two -IFs- when using an External Antenna with a
'portable' AM / FM Shortwave Radio :

IF # 1 - When Using In-Door External Antenna with
a 'portable' AM / FM Shortwave Radio - A Ground
{Wire} connection may not be required - Although
connecting a Ground may help reduce the Noise
{ Try It and See }

IF # 2 - When Using Out-Side External Antenna with
a 'portable' AM / FM Shortwave Radio - A Ground
{Wire} connection is Required for Electrical Safety.
Usually a Ground connection will help reduce the
Noise when using and Out-Side External Antenna.
{ Do It and See }

hope this helps - iane ~ RHF

Pathetic excuse, anwyay. Zarqawi, like Bin Laden, is Saddams avowed
enemy and resided outside of Iraqi control, in the outlands of
Kurdistan. Not even the kurds had control over this area. The bush liars
think if they attach the word terrorist with Iraq enough times it make
people think Iraq has something to do with 9/11 without actually getting
caught trying to say it explicity (which they have expressly denied
through intelligence)...Guess we went to stop the terrorism that only
attacking Iraq in the first place would create. One continuous line of
bullshit from top to bottom. FUCK THESE NEOCON LIARS and the little
swindlers in the group that still defend them (i think theres 2 or 3
left in the country still)

You may not be able to set to that frequency, but on most FM
receivers, the IF strip is sufficiently wide that it may not make much
difference. If the receiver has AFC, it won't make any difference at
all!

1146. Re: Looking for an Indoor Antenna for my Grundig Satellit 800 Radio

Newsgroup: rec.radio.shortwave
Date: 2006-06-09 20:55:37 UTC
From: Reloader <Reloader.295lpz@news.radiobanter.com>
Message-ID: <Reloader.295lpz@news.radiobanter.com>
Source record: 77932

I have had good luck on a couple of them. The AOR 320 (limits out at 15 MHZ) with replaceable loops. Still available from used places. The newer AOR's are better and more expensive. What I am using now is 2 Metal Slinkys@ strung as a dipole fed in to a 1:1 Spiro Balun. This works very well and no need to re-tune going band to band. Have used one for over 20 years. the AOR I maily use on MW and tropical bands.

The Grundig Satellit 800 already has a built-in Pre-Amplifier
that is used with the built-in "Mega Size" Whip Antenna.
{ The Built-in Whip Antenna is an Active Antenna.]

The Grundig Satellit 800's Whip Antenna is a design for an
earlier age of radio when Whip Antennas were Designed and
Engineered to be real Signal Gatherers: Large and Long and
Thick at the base and tapering to the tip. The majority of
today's 'portable' AM / FM Shortwave Radios have short and thin
Whip Antennas; which provide minimum Signal Gathering. The
Grundig Satellit 800's Whip Antenna is "Mega Sized" when
compared to the average much smaller Whip Antennas on most
of today's smaller 'portable' AM / FM Shortwave Radios. Plus
with the Grundig Satellit 800's you have the built-in Whip Antenna
Pre-Amplifier for add Signal Strength.

IMHO: The Size and Shape of the Grundig Satellit 800's built-in
Whip Antenna is about the Signal Gathering equivalent of one of
those 23 Feet Reel {Role-Up} Antennas that are required by most
other 'portable' AM / FM Shortwave Radios to get the same Signals
that the Grundig Satellit 800's provides with the "Mega Size" Whip
Antenna and built-in Pre-Amplifier.

QUESTION - So Why Use 'another' In-Door Active Antenna ?
When your already have "Mega Size" Whip Antenna and a
Pre-Ampliers built-in to the Grundig Satellit 800 Radio ?

First - Check-Out the Grundig Satellit 800 Millennium Group on YAHOO !
SATELLIT 800 = http://groups.yahoo.com/group/Satellit800/

Second - Read any and all of these Messages about
using Antennas with the Grundig Satellit 800 Millennium.

* Concerning the Grundig Satellit 800 Millennium's
"Mega Size" Whip Antenna with Pre-Amplifier for
Shortwave Listening. READ "GS800M's Whip Antenna"
http://groups.yahoo.com/group/Satellit800/message/4176

* One of the Grundig Satellit 800M's - Secrets for Top Perfromance
http://groups.yahoo.com/group/Satellit800/message/6093

Just because GWB says it doesn't necessarily make it true either, but
that never stopped you from swallowing it hook, line and sinker...I
believe that you'd refuse to believe anything bad about him if it came
from his own mouth, such is your blind affection.

Brian,

Easy for you to say "we'll be there for as long as it takes"...as long as it's not *your* family members that are there. (To say nothing of the hundreds of billions of dollars being wasted on this fiasco that could be waaay better spent on our home front problems).

What adds insult to injury is that we are there for no good reason and/or bogus reasons. American deaths and mutilations, tens of thousands of dead innocent Iraqi civilians, all for *nothing*.

The administration itself disavowed any WMDs way back in 2004 (and puhleze, no comments about the WMDs that supposedly went to Syria--even the administration is *not* playing that card--and you can take it to the bank that they would if they could.

The card that the administration finally *did* play was that "Saddam is a bad guy".

Well, yeah...OK... but so what?...

...and now that he's gone anyway, we are *still* there and probably will be for years more.

Bottom line: Poppy (GHWB Senior) didn't invade/take over Iraq because he said (and realized) "There was no exit strategy". Too bad W (Junior) didn't get it...and too bad the public is paying the price for his fiasco with the lives and mutilations of their children and hundreds of billions of their wasted tax dollars.

And you say "live with it". Very pragmatic of you, but too bad there's not a better solution...

I don't think that's true Bruce. We don't believe GW is perfect, in fact far
from it. But we do think he's a better alternative to what you and your
party have to offer. As a wartime leader he is very competent and able to
make the hard decisions that are necessary to win this war.

This is the kind of flippant rhetoric that sunk the bush regime into one
of the most scorned administrations in history. I encourage you to keep
opening your yap :)

Now answer the questions you puke - Were the WMD's in Iraq? Were they
behind 9/11? And has the attack on the Iraqis decreased anti-American
movements or increased them?

Assclown.

When I reached my first duty assignment in the USAF I was sent on a fools errand to get 1000 yards of flight line. When I got to the place I was suppose to pick it up I told the guys there that I knew what flightline was but I had an idea for a joke on the guy that sent me down there.They were very happy to help. We went out back of the base and loaded up a truck with rubble from flightline construction then took it back and put it the POV pickup of they guy who had sent me out. When I went back to the shop I told him I had the flightline but didnt think I had the thousand yards he had requested. This got him and everyone else in the shop curious and they all wanted to see what I had brought back. Thats when I told him to go look in the back of his pickup.

Brian - Time will tell. I hope you are right, but don't see it yet. Remember, the war that I care about, the one we signed on for as the American people, is on *terror*, and I still see evidence that more and more Muslim youth every day are getting that *martyr* spirit. The extremists' propaganda machine is grossly effective, and when you have a large army of people who are just as happy to be dead as alive, the war of words gets especially tough to win - and I doubt if we are willing to sacrifice people the way those bastards seem to be. I'm not sure winning that war is even possible, and have real doubts that GWB's "hard decisions" has made it any more probable.

FWIW, you have assumed that my party is Democratic, which is not the case, and possibly that I would not be just as critical of a Democrat/Independent/Peace and Freedom/Libertarian/Green/Communist/Fascist/etc who pulled the same stunts - which is also not the case. My primary gripe is with GWB, nobody else - as the single most responsible person in the nation (perhaps the world) he wears the mantle far too lightly for my taste. Anybody else who behaved the same way will have earned my disrespect.

I have a Sat 800 and an outdoor 20-meter random wire. I keep the whip extended and disconnect the outdoor wire when there are storms, etc. So I am often comparing the performance of the radio on the whip vs. the wire.

The 800 is the best-performing radio off the whip of any of the dozens of SW radios I have. While using the outdoor wire will usually get me an S-unit or 2 better signal strength, and a bit less noise (there's a little hum when using the whip), for the vast majority of the program listening I do, the whip is quite adequate. I wouldn't expect any other indoor antenna to give me anything better.

Now, I am in an old brick-and-wood house. If you are in a steel-frame building or an apartment with many different noise sources next door, your experience may differ.

What I find interesting is that the "imageshack" photo shows a power cord plugged into the left side of the radio. That would mean that it has
an internal transformer for AC power instead of using an external wall-wart pwer supply. That would account for a lot of the physical size (& weight) of the radio. However, that also means that it is set up for Chinese AC power (220 VAC?) and thus wouldn't be as easy to use here in the US as the models with wall-wart power that simply allow substitute wall-warts for different local voltages.

Importing one of these with the Chinese labelling wouldn't be as rewarding as it was getting the Degen models before they came out as English-labelled "Kaito"s (with the US power supplies), since you'd have to forgo completely using it on AC power (unless you also got or had a transformer power adapter).

The ones I've seen on Ebay come with a little step up transformer that looks
like a wallwart.

I would think that these devices would be ideal in a region that has a geographic-wide free WiFi field, such as is available now in some city centers (here in downtown St. Louis, for example) and are in the works for cities like Philadelphia. Maybe even if you live near a coffeehouse or restaurant that offers free WiFi? I note that the quoted article's author stated that he had his own WiFi network; I'd sure like to read some user experiences from people trying these devices in these "public" WiFi areas.

What I'm particularly interested in is whether these will work without having a for-real computer to interface with and logon to the public WiFi net.

The Bell South (Julie) woman next door is using my lawn mower to mow her yard because the priming bulb on her lawn mower is cracked and doesn't work.She will be moving back to her home area of Natchez real soon,she got a transfer to the Bell South central office in Vidalia,Louisiana.(Vidalia is just across the Mississippi River from Natchez)

Her Bell South land line got cut off today because the other woman (Vanessa) next door,her boyfriend didn't give her (Vanessa) enough money to pay the phone bill.There is another woman (Ella) whom is going to college,(lawyer classes,she is going to be a lawyer) and she will be moving in the house next door to me with Vanessa.

What a Hoot!,Bell South technician woman next door and her Bell South land line got cut off.She said I looked like I was enjoying that too much :()

Hi,

I just ordered a Degan DE1103. This is my first short-wave radio, and I have a couple of "beginner" questions.

How far away can I expect to receive with the DE1103? I'd like to pick up Russian broadcasts. That's not my primary reason for getting it, but it would be nice.

Also, do people still ask for and receive QSLs? I picked up a library book about short-wave radio and according to that, getting QSLs is a fairly common practice. The book was a little old (printed in the early 90's), so I'm not sure if that's still done.

Thanks.

David

Oh, you mean the terrorist that was in the Kurdish part of Iraq that
the US protected from Sadam. You mean the terrorist we could have
whacked years ago before he killed 700+ people.
========
Then in June 2002, in the early days of our "war on terrorism," US
intelligence officials learned "that Zarqawi and members of al-Qaida
had set up a weapons lab at Kirma, in northern Iraq, producing deadly
ricin and cyanide," according to an NBC report in March 2004. Not once
-- but three times -- the White House ignored Pentagon plans calling
for a strike against Zarqawi.

The Pentagon quickly drafted plans to attack the camp with cruise
missiles and airstrikes and sent it to the White House, where,
according to U.S. government sources, the plan was debated to death in
the National Security Council...

Four months [October 2004] later, intelligence showed Zarqawi was
planning to use ricin in terrorist attacks in Europe.

The Pentagon drew up a second strike plan, and the White House again killed it. By then the administration had set its course for war with Iraq....

In January 2003, the threat turned real. Police in London arrested six terror suspects and discovered a ricin lab connected to the camp in Iraq.

The Pentagon drew up still another attack plan, and for the third time, the National Security Council killed it.
==========

1181. Re: Cambridge SoundWorks # 740 Radio - Loop Antenna Up-Sizing ?

Newsgroup: rec.radio.shortwave

Source record: 78013

Telamon,

I have tried building and using a larger Un-Tuned Loop Antenna
with the Cambridge SoundWorks # 740 Radio several times
with out any sucess.

ORIGINAL AM/MW LOOP ANTENNA :
Eight Turns (8T) of Wire on a 4 5/8 Inch Square Form
with a 51 Inch Twisted Pair of Wires to the AM/MW
Antenna Input Jack. - - - Should be about 17.3 uH

AM/MW Loop Antenna Calculator :
http://www.mindspring.com/~loop_antenna/amloop_calc4.htm
This original (OEM) Loop Antenna worked barely OK
with the Radio for local AM/MW Radios Stations only.

LARGER AM?MW LOOP ANTENNA :
Four Turns (4T) of Wire on a 14 Inch Square Form
with a 15 Feet Twisted Pair of Wires to the AM/MW
Antenna Input Jack. - - - Should be about 17.5 uH
This Larger AM/MW Loop Antenna did not work at all.

Tried a 51 Inch Twist Pair feed-in-line and a 72 Inch
Coax Cable feed-in-line with this Larger Loop Antenna
with worse results then the original Loop Antenna.

-IF- In fact the Radio is Tuning the Loop then this Larger
AM/MW Loop Antenna should have worked at 17.5 uH
with the Radio's internal circuitry. It Did Not.

still insearch of . . . ~ RHF
.

1186. Eton E5 Battery Cover

Newsgroup: rec.radio.shortwave
Date: 2006-06-10 02:21:59 UTC
From: S Walters <compucat@sybercom.net>
Message-ID: <128kb69t4sm2s63@corp.supernews.com>
Source record: 78017

I just purchased an Eton E5 and while the build quality is excellent, I noticed that the battery cover does not latch tight onto the case. This makes it easy to slide open. Fortunately the cover is hinged so it won't fall off. Has anyone else noticed this with the E5 or might this be peculiar to my sample?

They learned their lesson. No Rod Stewart but they played interesting
instrumental music.

BH,

You are right the Redsun RP2100 on eBay does come with
a 110 to 220 VAC Step-Up Transformer.
LIYPN Writes : "A 110V input 220V. output step-up power
transformer included for FREE to buyers in America & Japan"

LIYPN Writes : "Battery: Uses 4 D size 1.5V. battery or
4 AA size 1.5V battery (not included in this auction)

LIYPN Writes : "Re-Charge of Batteries inside the Radio Possible"
- fwiw - I Don't know if this applies to the "AA" Batteries
{Most Likely} -or- the "D" Batteries ? ? ?

TIP - Either way Plug the Radio into the AC when not in-use
to Recharge the Batteries -and- Un-Plug it from the AC to
use-it on Batteries for lower noise and better reception in
most instances.

LIYPN Writes : "MANUAL IN PDF FORMAT
WILL BE PROVIDED FOR FREE"

hope this helps ~ RHF

You should be able to get Radio Moscow in English at night.
Most stations will send QSL cards. Most also have websites.

Signals reflect off the ionosphere and water pretty well and land not as
well so the answer is anywhere in the world as long as there is a good
propagation path from them to you.

> Also, do people still ask for and receive QSLs? I picked up a library

Yes it is still done but some stations are better about verifying than
others. There are people that read the news group that can answer
questions about QSL's.

Does that mean the unit can pick up SSB as it comes right out of the box, or do you have to buy an add-on "black box" or fiddle around with something inside, add another module, etc.?

I certainly hope that a radio that fancy is able to pick up SSB without any further "add ons".

> with the Radio's internal circuitry. It Did Not.

You want to make a 1 turn loop and it has to be at least 50 foot in length. If you have a 12 foot square room you can tack or tape magnet wire to wall facing the outside will work as long as you do not have aluminum siding or stucco. A wire mesh nailed to the frame is used to hold the stucco up.

Use the coax from loop to radio connection.

Then you are down to figuring out the antenna jack. It could be a three connection stereo or 2 connection mono plug. Whichever it is you have to get the right two contacts connected to the loop. The spec on the jack I can find on line just says 3.5 mm and that's it.

The loop is electrically small so it will pick up stations on edge in the plane of the loop.

I use a loop like this and I get -20 dBm levels for local stations on it.

I would try a simple loop antenna,either diamond or square or round shaped,at least about thirty feet in diameter.y'all must be having some real radio signals reception problems out there in California.Probally because of so many democrats and liberals cluttering up the airwaves.

A competent leader wouldn't have become a wartime leader. He wanted the
'political capital' and has said so repeatedly. Bringing shame and
disgrace to the US seems to have been his only success. Nuremberg
condemned criminals for having done less.

For One and All,

Using a AM/MW Loop Antenna with the Eton E1 Radio
Question - Whip Antenna Up-or-Down ?
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/2990

When you are using a AM/MW Loop Antenna directly
connected to Eton E1 Radio - Most of the time the
built-in Whip Antenna 'should be' Collapsed Down
into the Radio.

WHY - The Loop Antenna is a Directional Antenna and
give the best results "Peak" or "Null" when used
by itself.

HOWEVER - The Whip Antenna is an Omni-Directional
Antenna and will pick-up everything from All-A-Round.
When the Whip Antenna is Fully Extended it gathers
more AM/MW Signals and thus generally reduces the
effectiveness when the Loop Antenna is being used.

WHIP-UP -and- WHIP-DOWN
{ Do the Test Yourself }
Try the Whip Antenna "Up" with a Loop Antenna and
then try the Whip Antenna down with a Loop Antenna
on the AM/MW Band :

* First with the Whip Antenna "UP go from the Bottom
to the Top of the Band and Record the Frequency and
Signal Strength of 15 -25 AM Radio Stations.

* Then repeat the Process with the Whip Down.

Hope you find the Results interesting.

Just something to do when everything else is done.

e1-ing you all ~ RHF

Telamon,

The Plug / Jack is 3/16" Stereo - With the Loop
Antenna wired to the End-Tip and Center-Ring.
Note the Barrel of the Plug /Jack is not used.

Every leader? No, but this one for sure. He's done more to tarnish the reputation of the US than any other President. Hell..he even makes Nixon look like a saint.

> though, for some odd reason my SWR's are better.

What are SWR's? Does your antenna have multiple standing wave ratios?
Were they sick? Did they have MPD? Do you SWR's look in the mirror each
morning and say "well, who are we going to be today?"

Does the standing wave ratio own something called "are better"?

Are SWR's related to 73's, and if so does the hat help 73's also? Is
your antenna still a fertile female that gets wet whenever a large
capacitance hat climbs on top?

A local school had "Spelling Award's Day" on a sign out front. When I
saw a pamphlet, it said "Selling Awards' Day".

Maybe it was award's for selling extra 's as a school project
"SWR's" and "73's" , or should I s'ay award's for s'ellin extras'
s'sses ?

73's and Happy SWR's to all,
Tom's

An easier solution, would be to spend $65 for a Degen 1103 (1/8th the price), which comes with an internal ferrite-bar antenna.

I handled an E5 at RS and the build quality was far from excellent -
your problem is, more than likely, a Grundig/Eton quality control issue.

Hello,
I am a swm, 41 years old and blind. I am seeking a
male to be my
partner. Race is not a particular point here. he
must be
understanding and intelligent.

Interests are hikingm camping, radio, sci-fi and
cooking.

Since I am relatively new at this (not much
experience), I am willing
to learn. My social skills are not well honed, so
I may be a little
rough around the edges.

Yeah, I've noticed that about extremist Dems too:
they're more concerned about the here and now
and the living to the point of ignoring the future,
real threats to national security, and the long-term
effects of their half-baked pansy ideas. What really
irks me though about these extreme dems is that
they can be more conservative than conservatives
and block real progress.

The extremist repubs on the other hand are
just as bad for different reasons. They're more
concerned the unborn fetuses, those in
persistent vegetative states, organ doners,
and estate taxes and are generally paranoid
about death, the apocalypse, history and the
afterlife. Oddlly they can be more progressive
than liberals, if you don't mind the body count
that usually goes with it.

Well, I don't understand it all, but that's how I see it.

I have had mine for a month and a half now. Totally pleased with the performance of it. I have had Sony 2010's in the past, both with and without the Kiwa mods. This Eton E1 blows it away! The synchronous detector and filters are Drake's design and the passband tuning in a portable is a first. It hears everything my other solid state and tube receivers do and in some cases sounds better, YMMV.

Highly recommended.

Harold

1225. Bought eton E-100 at Radio Shack for slightly over half-price!

Newsgroup: rec.radio.shortwave
Date: 2006-06-10 15:27:39 UTC
From: Warren <juny57@rcn.com>
Message-ID: <0pol82pt5qcqf0k83q6tcap02fpmijes37@4ax.com>
Source record: 78157

I got an eton E-100 yesterday, listed as $69.97 Clearance ($99.95 list price), with an additional 3 day special of 25% off. Paid $52.48 plus $3.15 tax for a total of $55.63. This was in Eastern Penna.

Nice little radio especially for the price. Came with good earbuds and a vinyl case.

It looks like RS is getting rid of some of the SW radios again (to make room for more cell phones)!

Now, now, don't be too critical of our resident link spammer!

RHF is not too bright when it comes to technical issues such as switches.....:-)

I use mine with a Quantum QX Pro Loop, and leave the antenna extended so when I switch to FM it will work w/o having to scope the antenna back up again. Never a problem.

Maybe RHF has had too much RHF directed inside his skull and that pea sized brain is bouncing off those walls!

Hey David:
You may be interested in my shortwave radio weblog
(http://cobaltpet.blogspot.com/), where I post reception reports
(descriptions of stations that I have received and what they were
broadcasting), and photos of QSL cards that I have received. I submit
QSL requests to most stations via email.

Prime time shortwave (http://www.primetimeshortwave.com) is a handy
site because it lists a current schedule for many shortwave stations
broadcasting in english and listed with their target region (for
example: north america, asia, europe, africa). So you can go there and
look for broadcasts to North America by the Voice of Russia. In
particular the page I use the most is
http://www.primetimeshortwave.com/time.html .

Probably so. I am using mine in conjunction with a Ten Tec RX-340, a
Kiwa modded Sony ICF-Pro80, Kiwa modded IC-R75, R-390/URR, R-1051-H and
a couple of others.

Yeah, a noise blanker would be nice, but when one considers what is
inside that package, it is a good deal, imho.

S:
The battery cover on my E5 seems secure. It is securely in place when
closed and requires a fair amount of pressure to open it.

If you happen to contact Eton about this and you get a reply, please
post back here about it.

I don't get your point. There were no WMDs in Iraq. Both Bush and
Cheney have admitted this. Now Al Qaeda was in Iraq prior to the war,
but they were not cooperating with Saddam. That was why Zarqawi was
hanging out with the Kurds. There was also an Iranian terrorist group
hanging out in the Kurdish region. Both groups were non-secular, so
Saddam would whack them if he had the power.

There is this complete fucking idiot named Sean Hannity that claims the
WMDs were smuggled into Syria. What that twit doesn't get is if that
was true, the whole premise for the war would be blown. That is, the
goal was to contain the WMDs, so if the war caused the WMDs to leave
the country, the war would be a failure from the get-go. How that
stupid asshole Hannity gets a radio and TV show is beyond me, unless
there are that many fools that watch Faux TV or listen to Faux radio.

So he's the one spreading around that fairy tale the 29%ers like to
believe...

Has he considered that if there was even a *shred* of evidence
supporting that theory, the government would be shouting it from the
roof tops?

(and yet the government's silence on this is deafening).

Congrats on a good deal.

I too picked up one at my local Radio Shack. It's a great, little radio at that price.

Do not pay heed to the idiots who will post that you should've bought such-and-such a radio. The Eton is a nice, little radio with very good sound quality.

don't think its obvious to you yet, so I'll make it plain and simple:
your attempts to harass will only cause me to dig in deeper (and this you
don't want, because I might actually find something on you that can be
really damaging). The best advice is for you to leave it alone. don't
pursue it any further. you have lost the war (and are too stupid to realize
it).

lastly, you are being dropped into the ignore filters, so unless someone
else quotes you (or you change screen names AGAIN), you will not hear from
me. Any further attempts on your part will be dealt with appropriately.

Methinks your leg was being pulled.

The SWR with the apostrophe s is a grammatical error. The apostrophe s indicates that the SWR is possessive, that the SWR owns something; or, that the SWR is doing something. The apostrophe s is not plural!!

The plural, multiple, SWR is denoted SWRs.

David - Sorry the 3/32" {Sub-Miniature} Stereo-Jack ~ RHF

The External AM/FM Antenna feed-in-line requires a 3/32" Stereo
Plug to connect to the Cambridge SoundWorks # 740 Radio
* RadioRadioShack Catalog # 274-244
http://www.radioshack.com/product/index.jsp?productId=2062449

The Plug / Jack is 3/32" Stereo - With the Loop
Antenna wired to the End-Tip and Center-Ring.
Note the Barrel of the Plug /Jack is not used.

David - TYVM for the Link :
http://www.switchcraft.com/products/jack-search.html

ABOUT - Modern : Jacks and Plugs
http://en.wikipedia.org/wiki/Jack_plug
The 3.5 mm or "Miniature" and 2.5 mm or "Sub-Miniature" Size
Jacks and Plugs were originally designed as Two-Conductor
connectors for Earpieces {Headphones} on Transistor Radios.
The 3.5 mm and 2.5 mm Size Jacks and Plugs are also
referred to as 1/8" and 3/32" respectively in the United States,
* 3.5 mm ~ 1/8"
* 2.5 mm ~ 3/32"
.
.

Plan on spending upwards of $700, because it doesn't even come with
internal ferrite-bar, or satellite antennas ! Then, to top it off, it
doesn't even process DRM ! This radio is already outdated !

and as you can tell, some were forged, and some were placed there in an attempt to cause harm (which backfired on the people involved).

as for this forger, he's so much the coward that he won't post under his real identity and always from an anon mail2news gateway. what is he so afraid of, I ask. is it perhaps that his own closet has more than its fair share of skeletons?

He chooses me because he *THINKS* I am a convenient target (just like Tim Hoffman thought and look what that got him - a $10,000 fine and a record).

I leave it to the rest of you to consider the source (such as it is).

nope.
an obvious attempt to get me angry.... that little missive he posted was
forged over 8 years ago as an attempt to create a "blackmail situation". at
the time, I didn't know how to handle the game being played. these days
though, its rather easy. just report his drivel complete with headers.
he'll get the hint and lay off again. it would also help to killfile anyone
using my name at any other place than where I have been the last 8 years or
so: cox.net.

On the contrary, the plural of the letter A is A's. The plural
of the number 3 is 3's. It's not too much of a stretch to assume
that the plural of SWR is SWR's.

From Webster's: "apostrophe - a make used to indicate ... the
plural of letters or figures."

like I said favorable mention of Adolf Hitler

The one good thing about makes it easier to defeat the party behind
these sorts of attacks

hell people like David might be able to get Herr Pt Bucannan elected or
even David Duke which is a bitfrightening right there

Tune in to the Great Liberty Nitwit Net tonight
starting at 10:00 PM on or about 3.950 LSB.
No doubt the talk will be about Alex Jones gettin
his KOOK ASS detained by the RCMP and
Canadian Customs over his desires to crash the
Bilderberger Meeting in Ottowa so he could use the
half-ass footage he was hoping to get for another
one of his $19.95 cheeseball videos. What an ASS!

Baaaaaaaaaaa hahahahahahahahahahahahah!!!!!!
PFHHBLTTTTTTTTTTTTTTTTTTTTTTTTT!!!!!

(Hopefully he'll be featured in a future SouthPark with Terrence &
Phillip?) grin

Take SPECIAL NOTE that the radio is placed upon
the infamous **red velvet** background......

What dealer and SHILL BIDDER USING SELLER
do we all know who *also* does the red velvet thingie folks?

Welcome to E-Bay! Where you can be screwed 5 ways into next week.
ANYONE who buys ham or SWL gear on e-screw is a FOOL.

Yea, ok cuhulin. I'm a little bit of a doom & Gloomer. I believe in the Bible and that Jesus is coming back for us - what the Christian faith teaches us. Along with all that there is of course the devil. The anti-christ and the false prophet and so on. Some say the Jews are (still) God's chosen people. And take this belief to the point where the ragtops won't be able to launch a nuke strike against them. Maybe God will intervene in some manner or the nukes will just fail to detonate. I suppose if I'm going to take sides here it might be with the Jews (and republicans :-) rather than the alternatives. Anyway, the point was that the whole USS Liberty event has for the most part been forgotten. Another generation down the road - when those of our generation are gone - and that will all be just a footnote in an old out of date history book. If the liberals keep goin the way their goin the whole of history is going to be rewritten.

Sorry if I came across too strong with the faith thing. I know some people don't like the politics and religion on this board. I was going to respond off the board but thought what the heck. Some of the other threads on this board have degenerated into much worse.

I have a receiver for sale that would be a good deal for someone on a
budget.
you get an R-2000 that works fine but the cosmetics are only OK and the 1, 2
and 7 memory keys are loose and need to be secured somehow. they DO work.
I will also throw in 100 feet of antenna wire.
and A speaker if you wish although the internal speaker is not at all bad,
I can also throw in some other goodies, I have too many to list and will
give a list of free choices to the buyer.

I will have you note that I bought my Yaesu FRG-100 off of eBay, and have been quite happy with it. For $325 I picked up the kind of shortwave radio I've always wanted to have, and have managed to pick up over 50 countries so far with the RadioMaster P-30 antenna I'm using.

Excuse me while I drop this person into my kill file.

At least I don't double post!

And I identify myself!

AND, I bought it for use as a small spare radio that is great for
taking along camping. I also like to hear its great FM sound and FM
sensivity.

Also, I have had a previous Ten-tec single conversion radio that had
little or no image problems so your one-size-fits-all description of
single conversion radios is not always valid. Have you listened to
this model? If not, keep your opinions to yourself.

I dont know how to play any musical instruments,I can't even carry a tune.I do own some old musical instruments I bought cheap at thrift stores and fleamarkets.I know any any guitars can be fixed/repaired.I could have bought that Martin (if in fact,it was a genuine Martin,I know there are a lot of fakes and reproductions of many different kinds of things out there) guitar,but I dont know enough how to tell if it was genuine or not,and I didn't feel like spending that much money for a guitar.Besides,I like the old Hound Dog metal guitars.Yes,I know,there are reproductions of those guitars too.I have seen them at Morrison Brothers Music Company.(can you say,MOBRO) www.mobro.net There is another music company on Highway 80 West,about three miles behind my doggys couch.

I was reading the local newspaper yesterday...The Miles City Star (Montana) and they have a column called Stardust, about what happened 25, 50 and 100 years ago here in Miles City. In the 100 years ago section there was a little tidbit that I found highly interesting. I'll quote it exactly as it was printed in the paper. Keep in mind that what was said here was printed 100 years ago...1906...in the Miles City Star:
"R. B. Sigafoos, northwestern manager of the American DeForest Wireless Telegraph Co., gave a talk at the court house Friday night on the system. Wireless telephones, yea, even pocket telephones no larger than a man's watch, are promised by Mr. Sigafoos as the system developes."
Like I said...this was 100 years ago. This guy had a firm grip on what was to come didn't he ??? Just thought I'd share this.

I just bought one and am still learning to use it. I have a Sony 7600GR and a recently purchased Kaito 1102 and I like them all. I can see why Eton calls this the Elite Series. The performance is good and build quality is excellent. The bright amber backlight on th E10 can be made to stay on indefinitely. The tuning knob works well and at two tuning rates. The software setup can be altered by entering certain codes. The chuffing in the tuning knob can be selectively turned off. I wish it had SSB and a continuously variable attenuator but this is a good radio. The audio is pleasant and has a very powerfull audio amp. This radio has volume to spare. Yes, it is overpriced but it i sobvious that some real R&D is going into shortwave radios right now and to me that is worth a little extra. With the way the world is now and the domestic media controlled and the internet eventually going to be controlled, everyone needs to buy and learn to use a shortwave radio.

Thank you. I mostly read the newsgroup and rarely have anything to say, but this newb just had to get what he deserved. I need to strengthen my filters here on the group just to weed out the noise and stupidity.

But as I said, I'm quite happy with the Yaesu. It's been a good solid unit now for the last month, already receiving QSL reports back from several countries, and I'm sending out almost nightly additional letters and emails.

Just as a side note: Radio Prague responded to an email report in less than 10 days, and Voice of Russia replied 9 hours after I sent an email stating that the report was correct and that a QSL card would be sent post. It's quite nice to see the stations adapting to use email and web forms for reception reports.

with a good antenna, you should be able to hear half the countries on the
planet, maybe more. Russia is pretty easy to bag, depending on solar cycle
and other factors.

a center-fed doublet (2 equal lengths of wire per side) works pretty well.
depending on the wire lengths, it will have gain on some bands, and the
radiation pattern is hard to predict without modeling software.

end-fed wires aka long wires can work well too, again with gain which is
hard to predict. about 1 wave off the ground does quite well.

if you can afford a log periodic on 200 foot tower, go for it.

i used a Yaesu from 1990 to 1997. it was a good radio. i've used 2
Yaesu's, GE, and Sony, and all have been credible performers. i've guest
operated at places with $6000 radios, which did quite well, but the antenna
is far more important in my view.

Not too swift on the uptake, are we?

I can't fix your mess. You voted for the bastards. Get your Congressman
to complain in Washington.

==========
The military said guards at the camp in Cuba found the two Saudis and
one Yemeni not breathing in their cells shortly after midnight and
attempts to resuscitate them failed.

The deaths threw a fresh spotlight on the camp, which has drawn strong
criticism internationally and undermined support for the U.S. war on
terrorism that was launched after the September 11 attacks.

On the contrary, the plural of the letter A is A's. The plural
of the number 3 is 3's. It's not too much of a stretch to assume
that the plural of SWR is SWR's.

From Webster's: "apostrophe - a make used to indicate ... the
plural of letters or figures."
--
73, Cecil http://www.qsl.net/w5dxp

Well, Webster shows more than one error, at least insofar as formal English
goes. What Webster depicts is the "dumbing down" of what our kids are being
taught today.
Do what you wish, but those who are better educated will continue to use the
apostrophe to denote the possessive rather than the plural.

Source record: 78228

Who's still listening to shortwave radio?
Well, cows for a start...
Those broadcasters who wonder if it's worth continuing to use shortwave will be interested in a story published today in Tasmania. It's about farmer Alan Braid, who uses shortwave radio, amongst other things, to entertain his cows. Apart from a collection of cows, Mr Braid has about 400 radios. He says his radio in the dairy is usually tuned to local station 7NT, but ABC programmes for Tasmania are now only available on FM. "The old radios just won't pick that up. But I can still get 20-30 stations on the shortwave band," he said.

Read the story
http://www.examiner.com.au/story.asp?id=345218

1346. Re: Cambridge SoundWorks # 740 Radio - Loop Antenna Up-Sizing ?

Newsgroup: rec.radio.shortwave
Date: 2006-06-11 08:07:58 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1150013278.905029.66250@m38g2000cwc.googlegroups.com>
Source record: 78229

Telamon,

No - I do not have the Larger Loop Antenna Working.
Four Turns (4T) of Wire on a 14 Inch Square Form
- - - Should be about 17.5 uH
AM/MW Loop Antenna Calculator :
http://www.mindspring.com/~loop_antenna/amloop_calc4.htm
+ Tried Adding a Turn (5T)
- Tried Removing a Turn (3T)
Both were no good.

Yes - The Radio Pamphlet {Manual} refers to the
AM/MW Antenna Plug connections :
http://www.cambridgesoundworks.com/pdf/manuals/soundworks_radio_cd_740.pdf

Page 5 - Item B-1
Page 11- Back of Radio showing AM Antenna Input
Page 24 - Specifications
One rear panel AM Antenna 3.5 mm stereo minijack
Antenna stereo mini plug wiring configuration
sleeve - no connection, tip and ring - wire loop antenna
- - - That's It - That's All - - -

This is what I have figured out to date :
The External AM/FM Antenna feed-in-line requires a 3/32" Stereo
Plug to connect to the Cambridge SoundWorks # 740 Radio
* RadioRadioShack Catalog # 274-244
http://www.radioshack.com/product/index.jsp?productId=2062449

The Plug / Jack is 3/32" Stereo - With the Loop
Antenna wired to the End-Tip and Center-Ring.
Note the Barrel of the Plug /Jack is not used.

ORIGINAL AM/MW LOOP ANTENNA :
Eight Turns (8T) of Wire on a 4 5/8 Inch Square Form
with a 51 Inch Twisted Pair of Wires to the AM/MW
Antenna Input Jack. - - - Should be about 17.3 uH

CSW - Tried contacting Cambridge SoundWorks a month or two
ago and really could not get anyone there to answer any questions
about the AM/MW Loop Antenna : Tuned ? - Un-Tuned ? - uH ?
- - - Seems like they would have the Info and may be the name
of a Product that would work with their Radio for better AM/MW
Radio reception.

I also recently purchased a E10 on sales, something like 49.99 and
am very pleased with the radio, the FM sound is fantastic to me.

I also love the "rubber" type texture of the exterior.

When an organization of powerful and influential people operate in a veil of extreme secrecy, it only provides more fuel to the conspiracy theorists.

I listened to Alex Jones on Coast to Coast one night, and he was over the top. However, it's guys like that who serve as the canary in a mine shaft, to alert us to possible dangers ahead. The Bilderberg group may have started with the best intentions of improving US and Europe relations, but may have morphed into something far more controlling and insidious.

I picked up a Sony 2010 on ebay for about $250; works great.

I also got a Murch 2000B antenna tuner for $175; comparable new unit
nowadays would run about $900.

Also got a dandy little 1957 Heath AC-1 antenna coupler for $27.

There are a lot of good buys on eBay.

As for the $600 Sony 2010 in question, given its new-like condition
and collectable status, that's probably not far off.

Oh yes I agree also with that observation.
I too like 2 see morons on here and elsewhere
get themselves E-SCREWED. Finally I am 99.9%
certain that the guys who support e-Bay in here are sellers
using shill method to bid up their items. Probably the same
morons we used to see at all the hamfests each year
with the same high priced junk. EXAMPLE: A certain (now
thankfully defunct) ham radio 'dealer' in the suburbam Balto/DC area
I used 2 see comes to mind. He would go and buy up all the good
deals at 6:00 AM and re-sell them (or try to) later
in the day or at the next hamfest. He finally quit after
people got wise to him in a few Years. (was a typical jew
as you guess correct also) Today he sells cheap chinese
made bags and leather goods at regular flea markets.
He still stinks however and is one of the cheapest miserable
bastards I ever met. A typical ex-NY/NJ area transplanted kike.

Reception in northwest Florida on 11725 khz (from Bonaire) and 12030 khz (presumably from the Netherlands). Signal strength good on both frequencies from 13:00 to 14:20 UTC, carrying a retransmission of the Dutch network NOS and their match against Serbia.

Next broadcasts on Friday from 1500 to 1800 UTC on 15330 khz.

That definition agrees with what I learned in English
class 50+ years ago. The plural of a number uses an
apostrophe. So 73's would indeed be the plural of 73
as in "many best regards". It's no stretch to assume
that the plural of SWR would be SWR's.

Incidentally, I have an obvious typo in the definition
that the spell-checker didn't catch. Should have been:

"apostrophe - a mark used to indicate ... the plural of
letters or figures."

I have a "Webster's New Universal Unabridged Dictionary"
which contains a "Basic Manual of Style" in the back.
Here's what it says for "Apostrophe: ... 3. To form the
plurals of letters or figures add an apostrophe and an s."
That's seems to be prescriptive.

This is a reflection on the true dismal nature of this government; no trial, no justice, and no freedom. This country was created and always lived a lie; they will spin freedom and human rights but we know what happened to the Indians, Blacks, Chinese, etc... Why would anyone be surprised about Guantanamo suicides! You've been abducted by the CIA and flown to an unknown destination. You've not been charged with any crime, seen a lawyer or a judge. As far as you know, you'll be kept in that cage for the rest of your life? I'm surprised anyone has kept hope long enough to go on living.

Would a "Basic Manual of Style" change your mind?

I have a "Webster's New Universal Unabridged Dictionary"
which contains a "Basic Manual of Style" in the back.
Here's what it says for "Apostrophe: 1. ... 2. ... 3. To
form the plurals of letters or figures add an apostrophe
and an s. ..."

It does say that a few people object to number 3. As in
many other areas of the English language, the context of
the use of the apostrophe determines its function:

1. to replace missing letters,
2. possessive,
3. plurals of letters or numbers.

P.S. The better educated posters avoid violating the
attribution rules for newsgroups.

Looking over the schedule from the BBC, it looks like they don't plan
any live coverage on shortwave, unless there's a serious change of plan
(and England progresses). Now, I have seen that Radio Netherlands will
carry games on shortwave for their team, but nothing from Deutsche Welle
on coverage. Which is very odd, but I'm not totally unsurprised. The
last time Germany hosted they had broadcasts on shortwave, but that was
long before satellites and the Internet. *chuckle*

I see no difference between the Tories who fled to Canada during the
Revolution and contemporary Bush supporters. They are both traitors
to Freedom.

>Nothing mentioned on the BBC World Service Website.

Running in insomnia mode early this morning, (6/11 sometime around
11-14:00 UTC), I had 9740 (BBC East Asia) on. The new version of "Write
On",("Over to You"?), had a discussion of how they could cover the
World Cup. Given the type of rights they are allowed/have negotiated,
they are allowed to broadcast 90 Seconds per Match over the following
24 hours, and no archive rights.

IMHO, Broadcast rights for the World Cup are a mess. A very lucrative
mess for those involved, but it usually means that international
broadcasts lose out because the national rights for every country are
tied up in advance.

The incredible popularity of "American Idol" and the World Cup are
both proof that the bulk of humanity are too stupid to make their own
decisions. If a "1-world government" means that France will no long
exist, it will be a small price to pay.

1389. ATS-803A instructions

Newsgroup: rec.radio.shortwave
Date: 2006-06-11 17:58:21 UTC
From: wamos@together.net
Message-ID: <1150048701.090586.278420@i40g2000cwc.googlegroups.com>
Source record: 78070

Hi, I'm a novice in most SW ways -- primarily a listener who enjoys foreign news, music, and cultural programs.
I bought a new Sangean ATS-803A a long time ago, around 1989 I think, and used it off and on for a year or two, then put it on a shelf and forgot about it.
A couple of weeks ago while reorganizing a messy storage room next to my study, I discovered the radio and put it back into service at once. I'd forgotten how great it is and how much pleasure SW can provide. It's like getting a brand new outlet all over again.
On the strength of that, I recently bought a Passport to World Band Radio 2005 and am beginning to find my way around.
But I can't find the instruction manual that must have come with the ATS-803A, so I have little idea how to make full use out of it.
For example, I can't figure out how to set the time, now that new batteries have been installed. That's a simple matter, I know, but I've already said I'm a novice!
If someone can tell me in Basic English how to do that first step, I'll be thankful.
And if anyone is willing to photocopy parts of the manual that you think helpful to a starter, I'll be doubly thankful and happy to reimburse you for expense of photocopying and mailing. (I live in NE Vermont.)

Parenthetically, finding the ATS-803A saved me some money. After becoming interested in SW again, and thinking of an easily portable unit, I was about to order a Grundig S350 when I remembered the Sangean and found it impressive. It may be a bit old fashioned, but I bet it's more solidly built than many of today's portable units.

Cheers,

Bill

Source record: 78072

For years I have been using a Hustler vertical antenna which I have never been able to get working right. I paid about $100 for it. I kept adjusting and adjusting it, but the damn thing was no better then hanging a wire out of a window.

I replaced it with a CondoBuster antenna. I got it on ebay for $20.

The antenna is very light weight. It is all assembled. It is an off center fed dipole type antenna that you can put up in a bunch of different ways. Like you can put it up a a sloper or an inverted V or a dipole or an inverted U or inverted L.

It is about 35 feet long and is very light weight. The wire is very heavy duty number 10 stranded type wire.

I used RG-58AU coax for feed line. I decided to run the antenna as a horizontal dipole from the chimney on my house to a tree in the back corner of my lot. I live on a small city lot. The antenna is about 17 feet off the ground. It is black and the insulators are black so once you get it up it is difficult for the neighbors to see it.

The whole antenna is ready to go when you get it. I just soldered my coax to the antenna and the connected some nylon rope to the insulator on each end and put it up.

I was really impressed with the results. I left the Hustler antenna up so I could switch back and forth to see the difference. What I found was that signals were much stronger. The backgounds noise was much less and I mean a whole lot less. I have a little antenna tuner that I use and that appears to make a little difference in how strong the signals are.

Conclusion. I like the CondoBuster antenna. It works right out of the box and you don't have to screw around with it. The instruction sheet that comes with it has good suggestions for mounting. It is well built so it should last.

The S350 is very cheaply made - you are much better off the the
excellent 803A/DX-440 ! Tecsun/Eton bought the rights to market
products under the "Grundig" name, hoping customers would not realize
that their products are now made in China, not Germany. You are
absolutely right - since the excellent 803A/DX-440, SW receivers have
become cheap, over-hyped, over-priced plastic boxes. Consider yourself
very lucky ! Years ago, I had a DX-440, but finially gave it up
(dummy, me). I am unwilling to invest in any SW reeceivers now, because
of their cheap build quality. I had an S350, but returned it to RS (I
fell for a pretty face). I just AM DX with a cheapo, but very well

built RS PLL receiver (does as good a job, as the S350)...

I purchased an ATS-803A a while ago off ebay, and must say I am singularly unimpressed with it; it is absolutely deaf off the supplied 54" attached telescoping antenna, no better off a replacement 72" telescoping antenna, barely any better off a 35 foot dipole, and marginally better off an external eavesdropper "C" antenna. Even sent it in to RS to have it checked over, they sent it back "tweaked" & "tuned" $35 & 2 weeks later, to no avail.

Having said all that, there is a Yahoo newsgroup you can probably d/l the manual from: http://groups.yahoo.com/group/Sangean803/

You'd be much better off getting a Kaito KA1101 or 1103, a Grundig Mini 300 PE, a Realistic DX-302 or 394 IMHO.

Sounds like an ATS-803 a friend has. The problem turned out to be the
connection from the whip to the board, and the switch between the whip
and the antenna connector. Addressed that connection, cleaned up the
switch, it was good as new. To the degree that he listened to the
handover of Hong Kong on the BBC in his basement off the whip.

Your problem may not have been that simple, but it's a decent place
to start.

Then again, if your front end was overloaded, an FET may have needed
replacement. Also not a great problem, given that the ATS-803 board is
thru-hole, not SMT.

One other problem with the ATS-803 I've seen is the tails on the
through-hole components tend to be long enough, that when assembled,
they touch the other boards, and the shields on them, creating
intermittent problems.

Trim the tails on all visible components and the problems go away.

I would hazard to guess that the front end fet is blown in your specimen.
Yea, I know, there's no way that the experienced techs at R,S. would miss
that...

Thats why I mostly lay off of them so-called ''modern radios''.Everyday you look around,usually,something has blown/flew the coop on them no d..n good pieces of Crap,,, and it cost y'all a small fortune to get them modern no d..n good pieces of Crap fixed.I will stick to my old,old beat up cheap thrift store Radios.At least,mostly,they still work ok.

Maltese Falcon movie is on Radio tv now.My radio is purtyir than your radio.Yesterday afternoon,I told that old woman at Quality Pet,pet store (I went there to buy a bag of Natural Choice dog food for my little doggy) my dog is purtier than your dog.(she owns two dogs,Australian Shepard Dogs that she has lying around in the pet store) she said,No,she isn't!

1407. ABOUT - "Refurbished" Eton E1 Radios and a lot more . . .

Newsgroup: rec.radio.shortwave
Date: 2006-06-11 20:21:59 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1150057319.417634.102510@f6g2000cwb.googlegroups.com>
Source record: 78088

BH,

ABOUT - "Refurbished" Eton E1 Radios and a lot more . . .
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/3003

BACKGROUND :
With the Grundig Satellit 800 Millennium Radios that were
sold by Universal-Radio.Com - It used to {use to be?} that
buying a Refurbished Radio was a better deal since it had
gone through a second-round Quality Control Process and
most likely was a better {Defect Free} Radio then a new
one coming off the Production Line.

NOTE - "Discontinued New" Grundig Satellit 800 LW / AM /
FM / Shortwave / VHF Air Receiver Order #0800
http://www.universal-radio.com/catalog/portable/0800.html
"Reconditioned" Grundig Satellit 800 Order #0888
- - - Special Notice: Grundig has supplied us with a limited
number of reconditioned Satellit 800's. These radios have
been Fully Checked, and include all normally supplied
Accessories including the Grundig Headphones. The
Reconditioned models have a good appearance and carry
the same One Year Limited Warranty as the New Units.
These Radios have been Remanufactured and thoroughly
Checked by the R.L. Drake Company of Ohio.
http://www.universal-radio.com/catalog/portable/0800.html

I suspect that most of these "Refurbished" Eton E1 Radios
are on Heartland America because of the Product Recall
of the Eton E1 Radios due to the Batteries-In with AC Power
Problem are as-good-as-new /or/ better-than-new since they
were "Fixed" and then Re-Tested {Fully Tested} for Re-Sell
"As New" with a Limited Warranty.

"Heartland America" Item No. WW22-94813 is the
http://www.heartlandamerica.com/browse/item.asp?product=eton-am-fm-sw-xm-ready-radio&PIN=40948
Eton E1 AM / FM / Shortwave "World Band" Receiver
with optional "XM" Satellite Radio

Neither was I when I started. You try, you learn. Start with something
small, and work your way into more complicated things.

Before you know it, you'll be doing roadside repairs to the fuel
injection computer on your BMW, with a plastic spoon and burglar alarm
tape. (Don't ask. You don't want to know.)

I wonder if you had the ground plane for the Hustler set up properly.
The Hustlers are pretty good, especially for long-distance when they
are
tuned. The absolute minimum ground plane for a vertical is three or
four
1/4 wave radials drooping down from the base of the antenna when
mounted on the roof.
A commercial radio station has 180 quarter-wave radials buried at
2-degree
intervals. Hams have had reasonable success with eight or twelve
radials
on a ground-mounted vertical. Verticals also work well when mounted on
cars,
which provide a good ground plane. Because they are a high-Q antenna,
verticals
are not very good for multi-band short-wave listening as their gain
falls off
rapidly beyond their tuned frequency. They also tend to pick up more
noise
than a dipole. I wouldn't give up on the Huster but I would make sure
the
radials were tuned to some frequency of interest and use it for
long-distance
listening where its low angle would make it superior to the low
dipole. The
length of the radial and the tuned frequency of the Hustler coil must
agree.

1413. FS: First Edition GE Superradio 7-2880B Mint

Newsgroup: rec.radio.shortwave
Date: 2006-06-11 20:35:15 UTC
From: Cartrivision1 <doidy1@juno.com>

Source record: 78095

For sale: I have what I gather from the web to be a first edition GE Superradio. Model no. 7-2880B. It is in near mint condition. It even has the original product info "brochure" for lack of a better word attached to it. Runs on "D" batteries or attached AC cord. Superb deep sound and reception for such a smallish sized radio. And of course it is renown for it's DX ability on the AM band.

Best offer over $35 plus shipping, which would probably work out to about $10 or so within the US for parcel post.

thanks,
CTV

Considering the total US media blackout on the meeting
of the Bilderbergers in Ottawa, there are many Canadian
news accounts that cover the meeting and Jones' 14-hour
interrogation at the border, Those who are interested can find
accounts in Thursday's Ottawa Citizen, Toronto Globe and Mail,
Ottawa Sun, National Post and Canada.com. It seems that the
the Bilderberg instructed the RCMP and Customs officials
to harass Jones, who had done nothing wrong, and they only
ceased when reporters from the CBC and Ottawa Citizen got
wind of the detention. Alex does not try to "crash" the meeting,
but relies on leaks from the horrified hotel staff to let him know
what the elite are up to. Alex should have a report on his Monday
show.

The 803 is actually a "legendary" radio. If yours sucks, there's
"something" wrong with it...

The loop is just made of wire and will be untuned.

The manual shows a monaural plug in the picture but the last page
describes it as a stereo plug and that the tip and ring is used and the
barrel is no connection. Be sure to use the tip and ring connections on
a stereo plug.

You only describe things as no success and that is not very descriptive.
Do you not get any signal with the loop than comes with the radio?
Providing that you do get some stations with the loop that came with the
radio are you describing no success as the larger loop is no better?

Providing that you are getting stations with the loop that came with the
radio a bigger loop should work better but I would go with a single turn
large cross section of at least 50 feet.

Keep in mind what I wrote before that you could be living in a shielded
house and not know it if the exterior is stucco.

BH,

ABOUT - "Refurbished" Eton E1 Radios and a lot more . . .
http://groups.yahoo.com/group/ETON-E1-XM-Radio/message/3003

BACKGROUND :
With the Grundig Satellit 800 Millennium Radios that were
sold by Universal-Radio.Com - It used to {use to be?} that
buying a Refurbished Radio was a better deal since it had
gone through a second-round Quality Control Process and
most likely was a better {Defect Free} Radio then a new
one coming off the Production Line.

NOTE - "Discontinued New" Grundig Satellit 800 LW / AM /
FM / Shortwave / VHF Air Receiver Order #0800
http://www.universal-radio.com/catalog/portable/0800.html
"Reconditioned" Grundig Satellit 800 Order #0888
- - - Special Notice: Grundig has supplied us with a limited
number of reconditioned Satellit 800's. These radios have
been Fully Checked, and include all normally supplied
Accessories including the Grundig Headphones. The
Reconditioned models have a good appearance and carry
the same One Year Limited Warranty as the New Units.
These Radios have been Remanufactured and thoroughly
Checked by the R.L. Drake Company of Ohio.
http://www.universal-radio.com/catalog/portable/0800.html

I suspect that most of these "Refurbished" Eton E1 Radios
are on Heartland America because of the Product Recall
of the Eton E1 Radios due to the Batteries-In with AC Power
Problem are as-good-as-new /or/ better-than-new since they
were "Fixed" and then Re-Tested {Fully Tested} for Re-Sell
"As New" with a Limited Warranty.

"Heartland America" Item No. WW22-94813 is the
http://www.heartlandamerica.com/browse/item.asp?product=eton-am-fm-sw-xm-ready-radio&PIN=4
0948
Eton E1 AM / FM / Shortwave "World Band" Receiver
with optional "XM" Satellite Radio

For the "Heartland America" WebSite

I would bet so too! When used alongside my DX-394, it is obvious how poor
this receiver is. Know anybody that would be interested in
diagnosing/repairing for something less than an arm and a leg?

A wood frame stucco exterior one story house on a concrete slab is the
most earthquake resistant mass market structure possible. Southern
California is 90% stucco houses.

Telamon,

I have used the Select-A-Tenna with the Cambridge SoundWorks
740 Radio using a 1/8" Mono-Plug into the Select-A-Tenna and
a 3/32" Stereo Plug {Tip-and-Ring - not the Barrel} into the Radio.

While this works OK - each time the AM Radio Station is changed
the Antenna must be re-tuned. One of the Users of this Radio in
the Kitchen does not want to deal with Playing-wth-the-Antenna.

Also - I have used the Crane AM/MW Twin Coil Ferrite Rod Antenna
and the TG33 In-Door AM/BCB Medium Wave Active Loop Antenna
with the Cambridge SoundWorks # 740 Radio both of which tend
to OverLoad the Radio's RF Front-End. Plus again they need the
External AM/MW Antenna Re-Tuned each time that the Radio
Stations is changed.

Currently - I can use the small little (OEM) Loop Antenna with the
Select-A-Tenna {Taped to the Inside Top of the Select-A-Tenna}
and this will help to improve the AM/MW Radio Reception, some
what . . .

I want to simply have an "Un-Tuned" Large External AM/MW
Loop Antenna that is located 'out-side' that does not requirer
Tuning and gives me improved AM/MW Radio reception. ~ RHF

The loop is just made of wire and will be untuned.
-R- That is what I initially thought - but then may be it is.

The manual shows a monaural plug in the picture but the last page
describes it as a stereo plug and that the tip and ring is used and the

barrel is no connection. Be sure to use the tip and ring connections on

a stereo plug.
-R- Yes I am using a 3/32" Plug with the Tip-and-Ring not the Barrel
for the AM/MW Loop Antenna.

You only describe things as no success and that is not very
descriptive.
-R- That is true.

Do you not get any signal with the loop than comes with the radio?
-R- I get AM/MW Radio Signals - But not much stronger then using
the (OEM) smaller Loop Antenna located In-Doors and Not Across
the AM/MW Band. - - - This is why I was wondering if this Loop
Antenna was designed to be a Circuit Element in a Tuned RF Stage
within the Radio.
-Note- My first Loop Antenna for this Radio was located 'out-side' and
was simply 20 Turns on a 24" Square Frame with a 20 Foot Coax
Cable and performed poorer then the small (OEM) Loop Antenna.
[Basically a Larger Un-Tuned Loop Antenna located Out-Side.]
-Next- I started reducing the Number of Turns in this Loop Antenna
by Twos : 20 Turns > 18 Turns > 16 Turns > 14 Turns > 12 Turns >
10 Turns > 8 Turns > 6 Turns > 4 Turns > 2 Turns - Again with
poor results.
-Then- Went back to the Drawing Boad and Calculated that
the small (OEM) Loop Antenna was about 17.3 uH.

ORIGINAL AM/MW LOOP ANTENNA :
Eight Turns (8T) of Wire on a 4 5/8 Inch Square Form
with a 51 Inch Twisted Pair of Wires to the AM/MW
Antenna Input Jack. - - - Should be about 17.3 uH
? Question - Can anyone confirm this 'uH' Number ?

AM/MW Loop Antenna Calculator :
http://www.mindspring.com/~loop_antenna/amloop_calc4.htm
This original (OEM) Loop Antenna worked barely OK
with the Radio for local AM/MW Radios Stations only.

LARGER AM?MW LOOP ANTENNA :
Four Turns (4T) of Wire on a 14 Inch Square Form
with a 15 Feet Twisted Pair of Wires to the AM/MW
Antenna Input Jack. - - - Should be about 17.5 uH
This Larger AM/MW Loop Antenna did not work at all.

Again - Tried a 51 Inch Twist Pair feed-in-line and a 72 Inch
Coax Cable feed-in-line with this Larger Loop Antenna with
worse results then the original small (OEM) Loop Antenna.

Providing that you do get some stations with the loop that came with
the
radio are you describing no success as the larger loop is no better?

-R- The Large Loop is only slightly better on a Few AM/MW
Radio Stations and does not cover the complete AM/MW
Broadcast Band.

Providing that you are getting stations with the loop that came with
the
radio a bigger loop should work better but I would go with a single
turn
large cross section of at least 50 feet.
-R- This is bigger then the View {The Viewer} from the Kitchen
will allow.

Keep in mind what I wrote before that you could be living
in a shielded house and not know it if the exterior is stucco.

-R- Six-Inch Walls with Insulation (No Foil) and Sheet Rock
and Wood interior Wall surfaces with "HardiPlank" Filber
Cement Siding made from Portland Cement Mixed with
Ground Sand, Cellulose fiber, and other Additives. {No Iron
or Steel}

The only guy I know who does that sort of thing, reasonably priced, I might add, is Noel Ramos who can be found on the Sony 2010 group or the Sony sw-77 group. Thing is, he specializes in Sony's but talk to him he's pretty slick and fast too...

David,

IMHO - That is why a good out-side Antenna that is Out-and-Up
generally works better then an In-Door Antenna where Stucco
{Wire Faberic} and Metal Siding is concerned. ~ RHF

At least Five Feet (5') above the Peak of the Roof
-or- At least 15-Feet (15') away from the House.

An easier solution would be to buy a Degen 1103, for 1/8th the price,
at least it comes with an internal ferrite-bar antenna !

I had a buddy that bought one of these....No different than a 5 dollar dipole....NOT worth the 20$ He brung it over to hang and see what the problem was so we hoisted it up about 35 feet high between my tower and my third story window

I use a Hustler 6BTV and I contact ten times more DX on it than the condobuster can even hear.

The condobuster wouldnt even make a decent ground for a 6BTV. Replacing a GOOD but poorly installed antenna like the 6BTV with a mediochre one aint the answer folks.

Use of the apostrophe as a plural designation is rapidly becoming
passe'. IIRC it already is in the UK.

Possessive is the new standard.

I get my chops busted if I write with say last year's work instead of
last years work.

Would anyone know if its possible to get a replacement antenna for a
Panasonic RF2600?...Considering that this radio is 20 years I would be
surprised if anything like the original would even exist now...
I would sure like to get this radio up and running again...

Thanks

Greg

I don't understand. Possessive is the new standard? Your chops get
busted whey you write "last year's work"?
That IS possessive.

Perhaps that the Monday Show will feature
a cleverly packaged infomercial for the "tape"
that will "reveal all" to those who really want
to know.....for just $19.95 + shipping.

Hello,

I need to reset/repair my Supertech SR-16D SSB receiver (worldband
receiver).
I bought it in 1986 in Berlin (FRG) and used it to listen to the US
coast guard weather reports on SSB while sailing
That receiver has probably been sold under other names. The SSB
reception has always been excellent.

Now the screen stays blank although the light still works.
Can anyone help?

Thanks

Thierry

A large loop does not need to be tuned.

Start with the 50 foot circumference loop connected to the radio from the antenna. If that does not overload the radio front end then try 75 or 100 foot. You can tack one up for starters to see how it works with that radio and when you find a size that works well then you can make the effort to make it more robust against the elements.

According to the spec you should use the stereo jack, ring and tip. The center of the coax should probably go to the tip. Try it both ways to see which set of connections has the least noise.

Is it? I've always wondered. Does the work "belong" to last year?
Does last year "own" the work? It's *my* work that was done last year.

Curious,

George Bush is a saint and *I* am a trouble maker? Wake up, Brian. The man is pure evil. He is destroying any remaining good feelings the world may have about the US. Could you have imagined the US running torture/death camps? I sure sure didn't see it coming.

Bring back Nuremberg NOW.

wamos@together.net wrote:
>
> I bought a new Sangean ATS-803A a long time ago, around 1989 I think,

[snip all the rest]

That was a highly regarded radio. It always got favorable remarks in
Passports from the 80s.

Its (more or less) successor was the Sangean ATS-818 or Radio Shack
DX-390, RS, SKU 200-0214 or 20-214. The same radio with a built-in
cassette recorder was the ATS-818ACS or DX-392, RS SKU 200-0219 or
20-219. A revised version had the SKU 20-219A.

http://www.google.com/search?q=dx-390

Note that static damage is the topic of the second hit.

It wouldn't surprise me at all if you could use a DX-390's owner's
manual to figure out the operation of the ATS-803A/DX-440. So let's try
that Radio Shack page "RadioShack DX-390 AM/FM/Shortwave Receiver
(200-0214),"
http://support.radioshack.com/support_electronics/8186.htm

The "Operation" link,
http://support.radioshack.com/support_electronics/doc3/3609.htm
looks especially interesting. See if that works for you.

Best wishes.

>
> - 73 de Mike KB3EIA -

1. Too bad you have to work for/with people like that. " ... last year's work" is correct. The possessive does not exclusively denote ownership. It also denotes the "of or pertaining to" relationship, as in "Cleveland's bus system."

2. I just went to the McGraw-Hill Learning Center

http://highered.mcgraw-hill.com/sites/076743000x/student_view0/chapter1/apostrophes.html

and took their apostrophe quiz

Results Reporter
Out of 17 questions, you answered 17 correctly, for a final grade of 100%.

17 correct (100%)
0 incorrect (0%)
0 unanswered (0%)

Here's the most interesting one:

Last years womens softball team is much better than this years. [The stem omits apostrophes.]

C) Last year's women's softball team is much better than this year's.
Feedback: Correct!

3. Despite the absolute correctness of the apostrophe for the plural of numbers and letters, I see a lot of acronyms and abbreviations made plural by the addition of an "s" without the apostrophe and I don't flinch. I think the language is evolving regarding acronyms, which, after all, are less than 100 years old. Therefore, I vote to accept "SWRs."

73,
"Sal"

Does the language sound Asian based perhaps Voice of Indonesia which
uses 9525 in English at 800 UTC but probably the same transmitting
frequencies at 9525. Since it would be about 730 am your local time,
that would be approxmiately 930 Indonesian time in Jakarta.

A couple of years ago I was able to get copies of the owners and technical manuals for a Panasonic RF-B600 from Panasonic at 800 833-9626. Give them a try...things like antennas and power cords for older models might still be in stock.

Also, this is a link to their online parts service. If the antenna for your radio isn't available you might try another in the RF series.

Everybody is correct and everybody is wrong.

According to Turabian's "A Manual for Writers", plurals of most single
and multiple capital letters used as nouns are formed by adding "s"
alone. Example: SWRs
Form the plural of small letters, capital letters with periods, and
capital letters that would be confusing if "s" alone were added by
adding apostrophe and "s".

Now, everybody, back to work and mind your p's and Qs

Dear Greg,

You didn't mention whether you still have the original antenna. If you do, and if the segments are still okay (not bent or damaged in any other way), you may be able to repair it.

I have an older Realistic DX-400; the antenna would no longer stay up. The problem was the retaining screw and the washers. I was unable to find any replacement antenna that would fit the radio so I disassembled the antenna and took the screw and the washers to my local hardware store. There I was able to buy exact replacements.

Putting the whole thing back together, the antenna rod was now like new. (Reassembling the antenna was fun - my wife heard words she didn't know existed!) I bought spare screws and washers should this ever happen again.

I hope this is of some use to you.

Best,

Joe

[snip]

The ATS-803a is the same radio as the Realistic DX-440. Radio Shack did a good job supporting their products a few years ago and they have their faxback documentation available from their webpage. Here's a couple of pages for starters:

http://support.radioshack.com/support_electronics/doc17/17501.htm

http://support.radioshack.com/support_electronics/doc17/17502.htm

I got those links from Jill's DX-440/ATS803a page:

http://www.jazzkeyboard.com/jill/radio/dx440.html

There's a lot of useful info there, including a couple of other Radio Shack links as well as a link to the DX-440 faq.

Without a groundplane/radials it is essentially the same as a wire thrown out the window. Add the other half of the antenna (the radials or a decent groundplane, and it will be a much better antenna.

>
> I was really impressed with the results. I left the Hustler antenna up

> signals are.

The signals were stronger because you now have a complete antenna. The reduced noise level is most likely the rewsult of the horizontal configuration -- most manmade noise tends to be vertical in polarization. The difference in polarity results in about a 20db loss in the localy generated noise.

> I replaced it with a CondoBuster antenna. I got it on ebay for $20.
>

[snip]

What a coincidence! There was another poster at rec.radio.amateur.antenna
who told a similiar tale. Well, maybe not another poster, but he also
coincidentally posted through google groups!! And, amazingly, his brand
name ham antenna also paled in comparision with the $20.00 condobuster!!!

And -- who'd have figured -- there's a couple of condobusters up for ebay
auction -- RIGHT NOW!!!!!!

Surprisingly, both the rraa and the rrs posters neglected to mention the
ebayer's shipping price for the condobuster. Or maybe such oversights
aren't so surprising, given their parallel giddyness.

Well, I'm sure Art Bell won't take all this coincidentalism sitting down.
He'll kick Noory out of the chair and devote a full show to the remarkable
condobuster coincidences.

This might even be Alex Jones material.

> How far away can I expect to receive with the DE1103?

Pretty far. Where are you located? From the eastern US, you can easily hear Radio Australia on 9,580 kHz early in the morning.

Generally, you'll get strong signals at night on the lower freqs. Tune 5.7 to 6.1 MHz. In the daytime, the higher frequencies propagate better, e.g., 15.0 to 15.6. MHz.

Grundig/Eton radios are all about athesthics, not performance, or
quality. What is there to be jealous about - a single-conversion,
without SSB, radio for $50, or a dual-conversion, SSB radio for $65.
Why is $50 such a great deal ?

I think it would also be interesting to listen to "pirate" radio. Are there any pirate stations that broadcast on regular frequencies and at regular times? It seems like it would be a problem for the broadcaster, unless I'm misunderstanding what "pirate" means, but it can't hurt to ask.

Thanks.

I'm almost speechless...

Please show me documentation that the meteorologists at weather.com,
weather underground, weather channel, any of the network meoteorlogists
or the nati0onal hurricane center have ever wanted a hurricacne to
happen. If anything they a providing advance warnings of dangerous
weather and suggested precautions for residents.

Every review I have read confirms what you have written. It is a good
radio that will deliver a lot of stations. Like all other compact
portables it was never designed to be a DX machine, but it will allow
you to listen to a great number of broadcast stations on MW, SWand FM.
And it looks pretty good too.

I just happened to look at NewsMax.com for the first time in a long time, and I found a story on the flavanoids found in hops. One type can prevent prostate cancer. As the story at

http://www.newsmax.com/archives/articles/2006/6/12/94011.shtml?s=he

goes on to say:

"... the ingredient is present in such small amounts that a person would have to drink more than 17 beers to benefit."

I think I can manage that, but just barely. Maybe Mark Morgan's method of beer ingestion would be more efficient in reaching the prostate. I may have to rethink his postings. Maybe Mark is onto something.

(This space reserved for Mark to post "get help".)

I am looking forward to 2008 when Analog TV transmission
is phased out and half (..or more) of the TV sets in the USA
suddenly become useless overnight.

I can just see the rioting in the streets in the 'low income'
parts of town when Tyrone, Mustafsa and Kwang Bok
TV don't work and all the men come home from work and
seein they can't watch Springer or NFL they will all
start to beat their wives and 4 feral children senseless....

Should be GREAT FUN !!!!!

Even if you have a digital tuner, you are going to find that in urban
areas even within sight of the tower, you are going to have a horrible time
getting OTA digital reception, even with an outside antenna, like in 1948,
but worse. I've been there, done that, and it is a glorious mess until you
change your shoes, soak the antenna in salt water, and find out when your
wife walks around upstairs the signal will pixilate.

You obviously have not seen the 5th generation 8-VSB chip set receivers.
They perform quite well under multi-path conditions. The condition you
are referring to is a thing of the past. It has been corrected.

I have seen new receivers work with as little as a paper clip as an antenna and they perform quite well under strong multi-path

I know hillbillies still use the long 'A'. :-)
Did you know that when Jesus prayed to God in
Aramaic, he probably prayed to "Allah"?

It is a tone at 15Khz. There are some artifacts at lower frequencies,
the strongest at 3024hz.

John and Joe thanks for the reply.

My antenna is completely broken in half thanks to my wife trying to put it away with the antenna still up...Anyways I have done all I could to try and repair it with no such luck...It was the original antenna and have not seen it anywhere...I may try and call the panasonic number that was given here and go from there although I think its a lost cause...
Its a shame because other than the antenna being broke the radio works great..

Thanks again

Greg

FYI:
Eton sells to retailers as 'new' --not 'refurbished'-- those units in
the affected SN range that never entered the retail pipeline (i.e.,
units forwarded directly to Drake for inspection.) I believe they
charge retailers ca. $375.

ken.

Hey Greg. If you are a bit of a gambler, take a look at the antennas
for sale for the 2200...I think they are some ridiculously low price
like $13.00. Get one for that radio and one other that loght fit. An
extra washer would take up some slack and an extra fine file could help
a tight fit. I would not be surprised if the one of those antennas
from another RF model would fit your 2600.

What the heck are you talking about??!! I currently have a Philips HDTV and am using an outdoor antenna with rotor. I not only get perfect reception of the local channels, but depending on the weather, get several channels from Sacramento, about 180 miles north of me. Sacramento HDTV stations come in often during morning and evening, usually the SAME times the analog signals from Sacramento also come in. The difference is the analog signal will be weak and snowy and the digital signal is perfect. I also have gotten perfect reception from stations in Bakersfield (100 miles south of me), Salinas (100+ miles northwest of me), and even from San Francisco, nearly 200 miles from me. NEVER a problem with ALL the local channels.

The problem now is that many of the stations broadcasting in HDTV are using LOW power and will switch to their regular power at a later date. An engineer from a station in San Louis Obispo (100+ miles from me) told me that I should get channel 6 in HDTV once they increase to full power later this year, and that their HDTV signal will actually work farther than their analog signal.

I am 41 and that one is loud as hell. but then, I am also blind (which may
account for the better skills at hearing). it isn't 17 Khz either. its too
low and too loud for that. hell, I have a monitor in the other room that
screams at 19 Khz and it hurts like hell when it does.

Congrats on the good deal on the Eton 100. I just bought an E10 and I
like it. The Elite series all have good build quality, unique stylng
and respectable performance and I compare every radio I get to my Sony
7600GR. My impression of the Etons thus far is that they are well
thought out and intended to be a serious quality portable radio. I
almost bought an E100 myself. It was a tough choice between that and
the E10. It is a good radio. Enjoy it and don't let the naysayers get
to you.

Nothing new about that. I remember back in 1990, the only match the World Service covered in full was the final - and starting in 1994, that was limited to one feed (West Africa, I think). I can only guess it had something to do with the fact that a number of cable TV companies included BBCWS in their "cable radio" (you can hook the cable up to your stereo via its FM antenna terminals, the way you used to hook cable up to a TV's VHF antenna terminals in the 1970s), somebody at ABC figured out that, back in 1990, you could avoid the ABC coverage (and its commercials) by listening to the BBCWS audio while watching the commercial-free video on Univision, and they were not about to make that mistake again. I don't remember any BBCWS coverage in 1998 or 2002 - certainly nothing worldwide.

I have a 57" Phillips HDTV also. Never tried it with an outdoor antenna.
Direct tv offers my local channels (mostly in HDTV) on my dish and I get
fantastic reception. I have an antenna on the roof, but it's not designed
for HDTV, so I cannot give a fair evaluation of how well it does or doesn't
work.

You are quite right. These nasty people will do ANYTHING to embarrass Bush. They have no shame.

==========

Suicides are merely the tip of the iceberg

By Linda S. Heard, Special to Gulf News

How damnably inconsiderate were the three Guantanamo detainees who hanged themselves last week just so that they could make their jailers look bad? At least that's US Deputy Assistant Secretary of State Colleen Graffy's theory. She described the suicides as "a good PR move to draw attention".

It couldn't be the two Saudis and a Yemeni were despairing of years spent in cages with little hope of release when they chose to wrap their bedsheets around their necks. It couldn't be they felt their lives, punctuated with interrogations, stress positions, strobe lights, insults, humiliation, or worse, were no longer worth living.

It couldn't be that month after month of solitary confinement was perceived by those men as death on earth.

No, the termination of their existence was carried out solely to embarrass the White House, the supremely callous Ms Graffy believes. What a pity they can't be dragged back from the grave and thrown to the army's salivating Alsatians.

The commander of the Cuba-based gulag, Rear Admiral Harry Harris, has referred to the suicides as "an act of asymmetrical warfare". And all this time I thought warfare entailed the killing of others. Next time countries declare hostilities, they won't need fighter planes or tanks. Citizens can simply top themselves, saving the enemy the trouble and expense.

Thank goodness the 23 previous attempted suicides were prevented in time as they would have added further grist to the mill of Gitmo's

detractors, who just don't get it.

The US was attacked five years ago and as long as these former goatherders and shopkeepers, turned dastardly fiends, are incarcerated America's tall buildings are safe.

Of comparable nuisance value are Guantanamo's hunger strikers in search of a way out of their misery. But at least they can be force-fed in the most painful way possible with tubes thrust down their noses into their stomachs. That'll teach them.

Never mind the liberal chatter of human rights groups. After all, the camp's 460 inmates are some of the world's most brutal terrorists. Only 10 have ever been charged or tried, but so what. The all-powerful, all-seeing, all-knowing Bush administration that piously leads the free world by its nose cannot be wrong.

Perhaps I should rephrase that. Their actual dastardliness depends on the colour of their passports. The Brits have all been sent home where they keep busy writing their memoirs, being interviewed on TV and making movies. Those with only British resident status, however, are still considered blood thirsty and dangerous.

The Australian David Hicks appears to have been abandoned by his Washington-sycophantic government and his father believes he may be the next to exit at the end of a rope. He says his son is suffering from depression and has lost all desire to eat, tired of being confined to his cell for 22 hours each day.

Legal right

Hicks has the legal right to a British passport but although government officials, including the attorney-general, has called for the camp's closure, they're not about to upset their pals across the pond.

The sole American "Taliban" John Walker Lindh was tried on US soil in a proper court with the benefit of high-profile lawyers, which just goes to show that American-born "terrorists" are a notch up on the social scale. Lindh wasn't a nasty foreign evildoer; just a naughty young man who lost his way.

The American president has expressed his concern over the deaths, according to Bush's new spokesman Tony Snow, who was recently promoted from Fox News.

Bush wants to ensure that the three corpses are treated "humanely and with cultural sensitivity", he said. Perhaps if those men had been treated such while blood still flowed through their veins they would still be here. It looks as though the deaths may have finally jolted America's allies out of their apathy. A Saudi spokesman for the Ministry of Interior says his country wants its nationals so they can be tried "based on our laws and regulations". Saudi and Yemeni human rights organisation have called for an international investigation as to how

the men died.

An Associated Press report reads, "many Saudis have denounced the suicide claim as a fabrication" while "some have accused the US of complicity in the inmates' deaths".

Whatever the truth, Guantanamo is an ugly scar on Liberty's cheek. The German Chancellor Angela Merkel's direct appeal to Bush for its closure was ignored.

Britain's Constitutional Affairs Minister Harriet Harman is equally disturbed. "If it [Guantanamo] is perfectly legal and there is nothing going wrong there, why don't they have it in America?" she recently told the BBC.

In one way the surviving inmates are lucky. Their plight is now high up on the international radar screen and the likelihood is the US will be pressured into slamming its doors shut sooner rather than later.

The problem is those unfortunates are merely the tip of the iceberg. There are more than 600 detainees in Afghanistan's Bagram Airport facility and hundreds if not thousands estimated to be held in America's secret jails around the world.

In the meantime, the US State Department is "deeply concerned" about the arrest of activists in Egypt and has urged the Egyptian authorities to "investigate the matter and punish those involved". If nothing else, Washington surely deserves kudos for bare-faced nerve.

Some ingenuity may be required. I have a couple of Masterwork T/O attempts, with two whips each, and both of them have at least one bent, twisted, or broken whip. Now, ordering one is impossible from Masterwork. Radio Shaft had generics that weren't even close. So, I had to search in other places.

I found some websites (do a Google or Dogpile search) and found any number of possible candidates. The whip on the radio uses a ball a the base for swivelling into and out of the best signals. But the ball is retained behind a high cap that's exclusive to the radio. So, I found telescoping whip of the proper length (close will do) and of the proper base diameter with a ball, and removed it from it's mount, and transferred the whip and the ball to the Masterwork mount, screwed things back together and it both looks and works well.

Took about 2 weeks of digging. And some measurements and dry fits at a brick and mortar electronics store to get the proper dimensions, and nomenclature down, so I could correctly interpret the data as presented on the web pages.

Now,that was my experience and with a different marque. Your experience with a Panasonic may vary, but taking a creative approach may serve your purpose. And offer a modicum of satisfaction for having beaten planned obsolescence on its own terms.

I would have to zero beat the tone with my generator, but to me it sounds
like something around 3KHz.. .that's right in the middle of the most
sensitive part of the human hearing range..

sounds like 14 khz + to my ears, but i'll run it through my spectrum
analyzer.

play it on headphones. most speakers will have too much audible tweeter
distortion. the distortion is NOT the tone.

i used to be able to hear (still can?) the whine from a TV, which is 15 khz.
i could hear things like snow, scene changes, etc. i could tell from the
scene changes whether it was an action or drama movie.

bunkum

If your signal is strong enough, the aerial on your roof should get it
V or UHF. Some of those goofy antennas were for DX and they cost enough
to design I guess so maybe they should to recoup the ching. I don't
know about line amps and signals though. If you are in 5-10 miles of
the tower, I would dare to try a 6 ft speaker wire or a butterfly or
loop from the dollar store just for play. More than 30 miles out--stick
to the cable. It can get variable enough not to be worth it. My station
can't even send an STL from a digital source to the analog UHF signal
they use to tease for the second SD channel. Block party?

Try the cheap antenna (once you've found where digital channel 7.2 is,
in my instance. On UHF 2? in my case. You may be surprised.

1631. Grayland DXpedition Loggings & Comments - June 10-11

Newsgroup: rec.radio.shortwave
Date: 2006-06-13 06:44:07 UTC
From: Guy Atkins <dxNOSPAM@guyatkins.com>
Message-ID: <0d6dncB65dIlwxPZnZ2dnUVZ_rGdnZ2d@comcast.com>
Source record: 78414

This past weekend, I met with DXers John Bryant and Don Nelson for two nights of fishing for exotic signals at Grayland, Washington. It was great to see Don again after well over a year of our paths not crossing at DXpeditions; and John has recently returned to the Pacific Northwest where he is nearing completion of his summer and fall home on beautiful Orcas Island.

A few days before the DXpedition I felt a mild cold coming on, but I had hopes that it would pass quickly and not bother me while at Grayland. Nope--no such luck. Half way through the weekend, my head felt like an inflated weather balloon and my voice trailed away into broken, raspy speech as laryngitis set in. At least the fun of DXing would keep my mind off the misery!

Besides DXing, we each had related pursuits at Grayland. Don has been assembling a very impressive amateur radio setup, and during the daytime he was trying out a firmware upgrade to his computerized/motorized "Steppir" vertical antenna, along with working the kinks out of an amplifier and accessories. John erected a large 27 ft. X 100 ft. EWE antenna with adjustable termination to compare to the Beverages. I brought along my Eton E1 portable receiver, for what I expected would be very unfair comparisons against communications receivers.

John's carefully constructed large EWE antenna was disappointing in its performance at Grayland, with signals many dB down, providing no edge in S/N or signal intelligibility. In contrast, John says the large EWE is a "Beverage beater" back in his Oklahoma pasture land. Dramatic differences in ground conductivity are probably to blame, as we've always had difficulty getting good grounds in the sandy soil of Grayland.

The night of the 10th began with very good signals from Papua New Guinea on the tropicals, but virtually no signals or hets anywhere on medium wave. Finally, past 1000 UTC, some MW TP signals were heard; first were the Japanese, but then conditions quickly shifted to Australia and remained that way through dawn. The 11th was similar, but with far weaker PNGs on 90 through 60 meters (Wantok Radio Light was at good to very good levels both nights, though).

We had high hopes for spectacular MW propagation across the Pacific, based on the low solar flux and A/K indices the previous days. Unfortunately reception turned out to be "average", but I'll take average any day over the truly lackluster MW reception I experienced in January and April at the WA coast.

This DXpedition was my first chance to hook the portable Eton E1 to a "real" antenna. I fully expected the front end to "fold" when connected to the

Beverage antennas, but happily the E1 responded beautifully. It was great fun to cruise the tropical bands and MW splits with the Eton, and experience reception which in most cases was every bit as high performance as that provided by communication receivers. Particularly memorable was listening to World Cup soccer on 2NR Grafton, Australia (738 kHz) using the synch-AM detector in LSB selectable sideband to avoid the domestic on 740.

Click on the links below to hear a couple of DX audio recordings made with the E1:

http://www.guyatkins.com/files/sdr/wantok_r_light_7120_11_jun_2006_e1.mp3 (Wantok Radio Light, 7120 kHz, with talk & ID)

http://www.guyatkins.com/files/sdr/r_vanuatu_signoff_3945_10_jun_2006_e1.mp3 (R. Vanuatu 3945 sign-off with IDs, announcements, and anthem)

Check my SDR-1000 blog site (URL below) in a few days for comments and recordings relating to the Flex-Radio's performance on the DXpedition.

MEDIUM WAVE

558 UNIDENTIFIED Unid, Jun 10 1310 - Two stations mixing on 558: Japanese talk and music (presumed JOCR Kobe) and Aussie accented English with talk and an oldies tune (4GY Gympie?). Pretty low level for both stations. (Atkins-WA)

594 JAPAN JOAK Tokyo, Jun 10 1118 - First het and audio noted on the MW band tonight. Faint signal of male and female announcers in Japanese; improving to fair by 1122. (Atkins-WA)

612 AUSTRALIA 4QR Brisbane, Jun 11 1240 - Interview or talk show with male and female announcers, discussing bird flu. Parallel to 702 Sydney, also on the Metro network. Nice signal on peaks. (Atkins-WA)

684 FIJI Radio One, Labasa, Jun 11 1304 - Presumed. Nice choral female vocals and drumming at 1304; slowly giving way to a presumed Australian in English. Back to island music at 1308. Fair signal at best. (Atkins-WA)

738 AUSTRALIA 2NR Grafton, Jun 10 1126 - Low level signal, with Aussie accented English. Seemed to be talk on FIFA World Cup. Later at 1210, the signal was much stronger and competing co-channel with RFO Tahiti in French. Noted parallel 594 3WV Horsham at 1219. (Atkins-WA)

774 JAPAN JOUB Akita, Jun 11 1127 - Noted in passing at fair level with male announcer in Japanese. Parallel to 828 Osaka (stronger) and 747 Sapporo. (Atkins-WA)

783 AUSTRALIA 8AL Alice Springs, Jun 10 1220 - Presumed 8AL with good signal, but not parallel VL8T on 2325 (Alice Springs 2310 is off for maintenance, if i recall.) Very strong at times, with male and female announcers in English. Discussion of Tamil rebels in Sri Lanka at 1239. Noted with BBC relay of World Cup soccer (parallel 9740) at 1255 to time

pips at 1300 and into BBC world news. 8AL was a full 3 to 4 seconds behind 9740 (satellite delay). John Bryant notes this could possibly be 2YA Access Radio in Wellington, NZ running BBC soccer coverage rather than 8AL, but as he mentions there were no other Kiwis heard this morning. (Atkins-WA)

792 AUSTRALIA 4RN Brisbane, Jun 10 1242 - Nice program of classical and jazz music with male announcer discussing selections. '14 minutes until 11' time check at 1246. S-9 +10 dB signal!. (Atkins-WA)

891 AUSTRALIA 5AN Adelaide, Jun 11 1140 - Interview with announcer and male guest; seemed to be discussing Australian politics. Noted parallel 2325 ABC network, but 891 was mixing co-channel with presumed 4TAB Innisfail at times with discussion of horse racing. Fair level. (Atkins-WA)

963 UNIDENTIFIED Unid, Jun 11 1210 - Pop music and female vocals at tune-in; best on SW Beverage. Male announcer in English with possible ID at 1218, but too faint to decipher. (Atkins-WA)

1098 MARSHALL ISLANDS V7AB Majuro, Jun 10 1020 - Very likely Majuro here putting in a brief appearance, with island music and vocals in pres. Marshallese. Fair level for a few seconds, then back to threshold audio. Definitely not a South Pacific night! Noted a moderately strong open carrier on 1098 while trolling past the frequency later in the morning. (Atkins-WA)
1566 SOUTH KOREA HLAZ Cheju, Jun 11 1145 - Sermon and hymns in Chinese; typical for HLAZ at this time prior to switching to Japanese language at 1230. Strong and clear signal, and particularly enjoyable on the Eton E1 with synch-AM mode. (Atkins-WA)

SHORTWAVE

INDIA 4910, 1320-1340, AIR Jaipur Jun 10 Weak but increasing signal approaching Jaipur sunset. Subcontinental music at tune-in, then apparent news items in Hindi by male announcer at 1330. John Bryant and I compared signals carefully on 4910, using my modded R-75, the SDR-1000, and my newest acquisition, the Eton E1. The best signal? The Indian-made Eton E1 in its remarkable synchronous AM mode! Antenna in use was a 1000 ft. NW Beverage antenna connected directly to each receiver. The E1 never showed signs of overload from this lengthy antenna, even on medium wave, where it provided very impressive reception (for a portable receiver) of trans-Pacific stations, such as the uncommon 8AL outlet in Alice Springs, Australia on 783 kHz. (Atkins-WA)

INDONESIA 2960, 1050-1110, RPDT2 Manggarai Jun 10 Presumed. Female announcer reading a list of some sort, with many mentions of Indonesian city names and individual names. Perhaps the Indo version of 'communicados'. No pause or ID at top of hour, but some mentions of Manggarai at 1108. Nice S4 signal. (Atkins-WA)

PAPUA NEW GUINEA 3205, 1210-1216, R. West Sepik Jun 10 Very good signal of PNG pops music and male announcer in Pidgin with mentions of Vanimo, Papua New Guinea, and Sandaun. Phone interview at 1215. I did not do a formal

bandscan of PNGs, but the following were also noted in passing: 3260 R. Madang; 3325 R. North Solomons; 3355 R. Simbu (weak-tentative); 3385 R. East New Britain; 3905 R. New Ireland; 4960 Catholic Radio Network; and 7120 Wantok Radio Light (see separate logs on these last two). (Atkins-WA)

PAPUA NEW GUINEA 4960, 0845-1005, Catholic Radio Network Jun 10 Mellow acoustic guitar music and Christian vocals at tune-in. Into Catholic mass at top of hour without break or ID. I reviewed the recording of this station later, and noted that the Vatican Radio interval signal was heard at 1002 UTC, followed by a weak 'Catholic Radio Network' ID by man in English. Poor to fair signal at best. (Atkins-WA)

PAPUA NEW GUINEA 7120, 0805-0940, Wantok Radio Light Jun 11 Very impressive and strong signal tonight. Sermon in Pidgin by native pastor; acapella vocals in English; Christian contemporary music selections. Female announcer in English with time check '15 minutes past seven o'clock' and Wantok Radio Light ID; introduction to local gospel music group with song 'Hosanna, Hosanna'. At 0900, into relay of NBC (Port Moresby) news. At 0910, an interesting PSA for malaria treatment was heard; the text from my recording: 'Every year in Papua New Guinea, there are more than one million reported cases of malaria. That means about one quarter of Papua New Guineans suffer from malaria each year. But malaria can be treated by sleeping under treated mosquito nets every night. The mosquitos that spread malaria only breed at night. Treated mosquito nets are safe for you and your family, and enable everyone to get a good night's sleep. Mosquito nets do protect against malaria. Pregnant women and children under five are at most risk of dying from malaria, and must sleep under a treated mosquito net every night. Be sure to have enough net for the whole family; the more people protected by mosquito net, the greater the level of protection for the whole community. They come in a range of sizes-- single, double, and extra large, and are available at the grocer or your local store. Get more information from your provincial health office; buying treated mosquito nets is the best investment you can make to protect your family from malaria. Malaria can be treated and cured. Sleep under a treated mosquito net every night, and together we can beat malaria.' (Wow...more than a million cases each year in PNG alone? Why are a few cases of bird flu getting all the Western press? Third world issues always take a back seat, it seems.) (Atkins-WA)

VANUATU 3944.8, 0945-1115, R. Vanuatu Jun 10 Lengthy sermon in presumed Bislama at tune-in; nice sing-sing music by choir and acoustic guitar. Conch shell and drums at 1000, and into news items. A mix of contemporary Christian and pop music was played up until 1111 when a female announcer gave ID and full sign-off announcements including MW, SW, and FM frequencies, and mentions of Port Vila. Into anthem and sign-off 1115*. Good signal level, and very enjoyable on both the SDR-1000 and the Eton E1 with a Beverage antenna. Our usual setup at Grayland includes an impedance matching transformer ahead of a ARR preamp upstream of an 8-way passive Mini-Circuits splitter. A separate trio of components is used with each of the Southwest, West, and Northwest antennas. (Atkins-WA)

I was using headphones. I'm wondering if their mp3 file is fubar? The one I
listened to doesn't sound anything like 14KHz.. (not sure I could even hear
14KHz anymore, I haven't tested my hearing for it lately, but I do know I
used to be able to hear 15736Hz extremely well (horizontal scan), and cannot
hear it anymore. I can hear the tone on their mp3 like someone was speaking

to me. Can't imagine my mp3 player(s) would reproduce a tone off so far.

1633. MediaLine Radio: Current edition (3 June - 16 June 2006)

Total BS. Remember the War on Poverty? The War on Drugs?

War is no longer necessary. It is nothing more than a mechanism for
one group of people to pick the pockets of another. No different than
the Welfare State. Except the Queens drive aircraft carriers...

1666. Lightning Protection - "The Extra Step" - Un-Plugging the AC Power - Question : Do You ?

Newsgroup: rec.radio.shortwave
Date: 2006-06-13 16:50:51 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1150217450.991397.174400@y43g2000cwc.googlegroups.com>
Source record: 78446

For One and All,

Lightning Protection - "The Extra Step" - Un-Plugging the AC Power
- - - Question : Do You ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/10141

Robert [VA2ERY] - I believe that Chris is also Un-Pugging the Equipment

from their AC Power Sources : The Household AC Power System can be
the path of destruction for a 'very near'{Tree-in-the-Yard} Lightning
Hit.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/10136

Many Do Not 'un-plug' the AC Power Cord from their Equipment.

Some do 'un-plug' the AC Power Cord from the Wall Outlet.

Some will 'un-plug' the AC Power Cord from the Equipment.

Some may 'un-plug' the AC Power Strip (Surge Protector)
from the Wall Outlet.

Some simply 'Turn-Off' the AC Power Strip (Surge Protector).

Some go way beyond 'disconnect' the Antenna from the Equipment;
and will put a Shorting Plug / Wire across the Antenna Inputs of the
Equipment; plus they will Un-plug the Equipment from the AC Power.
{ Usually these Guys wear both a Belt and Suspenders :-}

WORST CASE SCENARIO :
-IF- Lightning Directly Hits your Shack and Fuses All the Equipment
and sets your House-on-Fire and the House Burns Down to the
Ground : While you are away on Vacation with your Family.
-Remember - You Are Still Alive and Your Family Is Safe [.]

FWIW - The Gralic always grows best around a well
watered Ground Rod or the Concrete Pier foundation
of a Radio Tower :o)

as aways i am un-plugged - cause - iane ~ RHF

I do unplug the euipment when I am not using it. It is so simple, and
so worthwhile - and we don't even have many electrical storms around
these parts (which is a shame, because I love them)...

Updater on 783 kHz: this was almost certainly 2YA Wellington, New Zealand, not 8AL Alice Springs. John Bryant checked 2YA's Web site this morning, and discovered they broadcast BBC World Service between midnight and 5 a.m. their local time, which is within the timeframe we were DXing. 2YA had a pretty amazing signal, considering that propagation didn't favor New Zealand at all (we heard no other Kiwis on the DXpedition). There have been rare times in the past when conditions were the reverse-- all Kiwis and no Aussies.

> 783 AUSTRALIA 8AL Alice Springs, Jun 10 1220 - Presumed 8AL with good

The point I'm trying to pound into your thick skull is "why are you
constantly assaulting your fellow hobbyist in this forum with off topic
political crap? It serves no purpose but to upset people and piss them off.
Do I look like GW? NO! So go write your state senator or form a political
movement or donate your time to the party of your choice or whatever you
have to do. I've never seen so much wasted time and bandwidth in my life for
nothing. You could have done quite a bit for your party or cause with the
time you've spent her acting like an a hole, so the only thing I can figure
is you get your kicks out of pissing people off.

Looking at Ebay, you didn't over spend, and got a very good receiver.
Did you consider getting a Degen/Kaito 1103 ? With the
dual-conversion, you won't have the image problems of single-conversion
receivers, such as, the Eton E10 and E100 and Grundig S350. Radio Shack
puts these single-conversion non-SSB receivers at $100 - $120 retail !
Then on clearance, they drop to about $50, but still a ripoff !
I've seen posts, where people thought they got a good deal on these
shitty Grundig/Etons at $50 - I'de say, for $65 get a Degen 1103 with
dual-conversion and SSB.

It would be easier to post the article rather than posting a site which requires people to sign up. You will not have many reading it as it is too much trouble.

Hey Brian,

I think you are being hostile, because you know the E1 is way
over-priced for what features are offered, and, "to boot", the receiver
is already out-dated. You will, "give a rat f--k about DRM", when your
E1 is sitting on the shelf collecting dust !

I have no party.

There comes a time when hobbies must take a back seat to more pressing
issues. The USA is about to go down in a big-ass ball of greasy fire.

Tim - What I Post -is- What I Post ~ RHF
[What Your Choose To Read -is- Up To You ! :<]

Lightning Protection - "The Extra Step"
- Un-Plugging the AC Power - Do You ?
- - - Link Removed - - -
{ And Now You Know - The Message Is The Same Here-or-There }

Robert [VA2ERY],

I believe that Chris is also Un-Pugging the Equipment
from their AC Power Sources : The Household AC Power
System can be the path of destruction for a 'very near'
{Tree-in-the-Yard} Lightning Hit.

Many Do Not 'un-plug' the AC Power Cord from their Equipment.

Some do 'un-plug' the AC Power Cord from the Wall Outlet.

Some will 'un-plug' the AC Power Cord from the Equipment.

Some may 'un-plug' the AC Power Strip (Surge Protector)
from the Wall Outlet.

Some simply 'Turn-Off' the AC Power Strip (Surge Protector).

Some go way beyond 'disconnect' the Antenna from the
Equipment; and will put a Shorting Plug / Wire across
the Antenna Inputs of the Equipment; plus they will
Un-plug the Equipment from the AC Power.
{ Usually these Guys wear both a Belt and Suspenders :-}

WORST CASE SCENARIO :
-IF- Lightning Directly Hits your Shack and Fuses
All the Equipment and sets your House-on-Fire and
the House Burns Down to the Ground : While you are
away on Vacation with your Family. -Remember -
You Are Still Alive and Your Family Is Safe [.]

FWIW - The Gralic always grows best around a well
watered Ground Rod or the Concrete Pier foundation
of a Radio Tower :o)

as aways i am un-plugged - cause - iane ~ RHF

We have elec storms here that sound like WWIII. You have to hear and see it to beleive it. You should see our hail, I've seen it the size of tennis balls and I heard it was the size of grapefruit up north once. It most the time about the size of a dime to small rubber ball.

indeed with such over the top Bs one has to wonder if David isn't
working for Rove or Robertson out to defeat the Dems by making them
look rediculous
